Such gestures are a fitting tribute to a remarkable fuel, which, since its discovery, has played a vital part in the mighty U.S. economic and military machine. Unfortunately, however, owing to the untimely intrusion of the Federal Government, the occasion has lost some of its luster. For in a year dedicated to the power and glory of domestic petroleum, Washington perversely has chosen to underscore its growing competitive weakness. Last Tuesday the White House imposed mandatory quotas on imports of crude oil and refined products. According to a proclamation of the President, the move was made to safeguard the national security. More jaundiced observers tend to view it as a political gift to U.S. oil and coal producers, thoughtfully wrapped in the flag. While the causes may be murky, however, the probable effects are all too plain. Import quotas will damage American prestige abroad. They will hurt the consumer at home. In the end, they are likely to lead to outright Federal control of an industry which once was famous for its flaming independence.

This mess of protectionist pottage has been threatening to boil over for a long time. It started to simmer 5 years ago, when Congress, at the behest of domestic producers of coal and oil, passed a special amendment to the Reciprocal Trade Agreements Act. Specifically, the Office of Civil and Defense Mobilization (then known as ODM) was given authority to decide whether imports of any commodity constituted a danger to the country. With this club in the closet, to change the metaphor, the agency soon persuaded the importers (who include not only the major integrated companies, but also a growing number of smaller operators) to embrace a system of voluntary import restraints. Though fairly effective, the velvet glove policy failed to satisfy the protectionists. Under their relentless pressure, the White House last week finally was persuaded to bare its iron fist. Complete details of the mandatory scheme are not available; the harsh outlines, however, may be discerned. To begin with, it covers not merely crude, but also, for the first time, residual fuel oil and other products. Effective immediately, moreover, all imports will be reduced, by as much as 20 percent in some cases. In a new and disturbing departure, finally, the Government plans to act as a kind of watchdog over petroleum prices.

To justify its outrageous program, the administration, as noted, has taken refuge in the plea of national security. Specifically, it cites the decision of OCDM that oil imports, at recent levels, constitute a threat to domestic producers, whose well-being, in turn, is viewed as a strategic imperative. Despite its impressive authorship, this finding is clearly suspect. Imports, to begin with, have not throttled the domestic industry; at worst they have tended to slow its growth. From the military standpoint, moreover, Canadian oil, the flow of which also has been curtailed, is surely neither more vulnerable nor less valuable than its U.S. counterpart. Finally, the OCDM seems absurdly out-of-date in its whole approach. Like the proverbial generals, the defense officials are preparing for the next war with the tactics of the last. Yet, if one is to credit the testimony of the Commander in Chief of the Armed Forces (given the very day after he issued his proclamation), the United States never again will fight a major war with anything but atomic weapons. In such a holocaust, oil in the ground is a dubious asset.

The advantages of the mandatory program thus are illusory; the drawbacks, contrariwise, are very real. For consumers, the bill already has begun to mount: scarcely had the new curbs been announced when one Midwest refiner, the forerunner of others throughout the country, raised the price of gasoline. As to the industry, some producers, notably those misleadingly known as independents, may enjoy a temporary windfall. Their gains, however, in part at least, will come out of the pockets of other oil concerns, notably large refiners such as Tidewater (which estimates its losses at roughly $25,000 per day). What is worse, they will be at the expense of the very system of free enterprise under which the venturesome oil business, perhaps more than most, has grown and prospered. Among other things, the new decree will mean Federal licensing and inspection; freezing of competitive status; and, if history be any guide, trafficking in quotas and bootlegging of crude. Sooner or later, it could lead to price controls, all the way from wellhead to pump. Two years ago, a high-ranking bureaucrat warned that "if mandatory curbs were initiated, there would be no assurance that they would not eventually blanket the industry." Unlike most forecasts out of Washington, his grim prophesy shows signs of coming true.

While the outlook, then, is none-too-bright, all is not yet lost. According to reports in the trade, several leading companies are planning to challenge the new controls on constitutional grounds. Perhaps in the courts they will succeed in defending the rights which Congress and the White House have overridden. One can only wish them success in their quest. Meanwhile, as the industry prepares to observe its centennial, it will do well to ponder a homely truth. Since 1859 the oil business has thrived on individual risk and reward, not on Government largesse. Willingness to venture remains its best hope for the next 100 years.

## Panama Canal: Communists Entrenched On Southern Flank

EXTENSION OF REMARKS
OF
**HON. DANIEL J. FLOOD**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. FLOOD. Mr. Speaker, in a number of addresses on the Panama Canal, I have invited attention to the growing menace of communism in the Caribbean areas with special reference to the countries bordering the approaches to the Panama Canal and on the Central American Isthmus.

An informative news story by Edward Tomlinson, distinguished Latin American correspondent for the Scripps-Howard newspapers, on current political developments in Venezuela, was published in the March 17, 1959 issue of the Washington Daily News.

Under leave to extend my remarks, I include the indicated news story:

[From the Washington Daily News, Mar. 17, 1959]

A DANGEROUS SITUATION FOR UNITED STATES—COMMUNISTS ARE STRONGLY ENTRENCHED IN VENEZUELA

(By Edward Tomlinson)

CARACAS, VENEZUELA, March 17.—The Communists not only are strongly entrenched here, they enjoy more prestige and respectability in Venezuela than in any other Caribbean country.

What makes this significant, even dangerous to us, is the fact that Venezuela, next to the United States, is the biggest oil producing country in the world. Our citizens have invested more than $2.5 billion here.

Geopolitically, Venezuela commands the Caribbean approaches to the Panama Canal. The big airfield at La Guaira, 30 minutes from downtown Caracas, is the aviation gateway to eastern South America. From there the stratoliners and jets take off for Rio, Sao Paulo, Montevideo, Buenos Aires and other big southern cities.

If Moscow, through its Red puppets, could dominate such a strategic and rich domain they would control one of the keys to the hemisphere.

PLENTY OF MONEY

The local Communist Party is efficient and businesslike, with plenty of money to spend. It rolled up 150,000 votes in the recent general elections, and put two senators and five representatives in the new Democratic Congress. Red candidates also won several seats in the Caracas City Council.

The party boss, Gustavo Machado, and other important leaders are well educated and come from some of the country's oldest families.

As everywhere else, Reds have infiltrated labor unions. The big oil workers' federation and several smaller interior groups have joined with ORIT, the Inter-American regional organization of workers, which is backed by the AFL–CIO. They still are fairly free of Communist influence at the top, although numerous Reds are in lower echelons.

SPOKESMAN

One of the chief Red spokesmen in educational circles is Hector Mujica, secretary-general of the student union in the university's school of journalism. Marxists as well as avowed Communists occupy prominent positions on various faculties. Only last

week leftist, Yankee-hating former President Juan Jose Arevalo, of Guatemala, now in exile, arrived to begin a year's lectureship at the school of economics.

It generally is thought that Reds are not tolerated by military and strong man governments. Yet they were among the most ardent Peron supporters throughout that dictator's rule in Argentina. Here in Venezuela they operated almost openly under the dictatorship of Gen. Marcos Perez Jiminez.

Although President Romula Betancourt has taken a strong anti-Communist stand, the party is in a position to whip up powerful opposition. It has leftist sympathizers, if not members, in the editorial departments of most leading newspapers.

DISLIKE PRESIDENT

The Reds have no love for the new President. Senor Betancourt was a party member in his youth. Therefore they look on him as a renegade.

But they also fear him. They realize he understands the fine points of their strategy and tactics. And they are still smarting from his campaign declarations against them.

Most of all, they are angry because he spurned their offer of cooperation when he was forming a coalition cabinet with members from other opposition parties as well as his own Action Democratic Party.

Experienced observers here believe the comrades are waiting for some critical national issue, or some serious blunder of the administration, to launch an all-out attack on the new government.

## Price Fixing—Vertical Becomes Horizontal

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, vertical price fixing is illegal according to antitrust law. Collusion or conspiring to set prices by manufacturer, distributor, or dealer is declared illegal by antitrust law serving as a protection to businesses in healthy competition. Horizontal price fixing is illegal, too. Manufacturers, distributors or dealers respectively must not get together to set prices. No one questions the need for such protection. Not until now, that is.

Now, the terms of the proposed fair trade bill H.R. 1253 are simple—set aside this antitrust protection of business and permit vertical price fixing by the manufacturer stipulating the retailers' price.

Well, there's a sleeper in this one. Problems of definition always trip up the bureaucrat or economic planner trying to control the uncontrollable, namely the market place of healthy competition. Vertical price control will result in horizontal control too. As Stewart Lee, chairman of economics at Geneva College points out:

If the owners of pharmacies would agree to sell all brands of toothpaste at the same price to avoid price competition, the law would declare this horizontal price fixing. But if the pharmacists would persuade each manufacturer to fair trade his products, the end result is horizontal price fixing.

Thus, vertical and horizontal price fixing both result and declaring one legal or illegal in this case necessarily affects the others. Simply saying this is not so in a bill. Fair trade will not change the result.

## The Universal Training and Service Act: Opinion Poll

EXTENSION OF REMARKS
OF
### HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an opinion poll sponsored by the International Relations Club of Monmouth College, and carried out by students of government. This poll relates to the Universal Military Training and Service Act.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

OPINION POLL

Explanation: After making a study of the proposed 4-year extension of the Universal Training and Service Act, using Government documents and reports of various nongovernmental organizations, IRC decided that the public should be asked where it stands on this very important, but little discussed and little debated bill H.R. 2260 now before Congress. They thought our Senators and Representatives, too, might like to know.

Would you, as a U.S. citizen, kindly indicate: What in your opinion should be done about the Universal Military Training and Service Act and the expiration of the draft on July 1, 1959?

Which of the following alternatives do you think Congress should follow? (Please mark your preference with an "X" in the parenthesis.)

Total answering questioner, 387.

1. I favor extending the present law for 2 years only as the representatives of the U.S. Chamber of Commerce and of labor urged at the hearings of the House committee: 15.

2. I favor letting the peacetime draft lapse, as Great Britain is planning to do by 1960, and see whether enough continue to volunteer for the purely military jobs, while letting civilians do the purely civilian jobs now being done by draftees. (See the Cordiner Commission report): 124.

3. I favor extending the peacetime draft 4 more years as suggested by the Pentagon and urged by Representative VINSON of the House Armed Services Committee and passed by the House. (It is now in the Senate): 54.

4. I am not satisfied that this bill which Representative VINSON called one of the most important to come before the House in this session was debated only 4 hours by that body: 27.

5. I favor a more thorough debate and more careful study of the numerous possible alternatives to the present law to ascertain what is best for our Nation and its defense needs in this rapidly changing age: 129.

6. Gave their own suggestion: 38.

## Government Educational Policy in International Affairs Should Be More Clearly Defined and Directed by One Department

EXTENSION OF REMARKS
OF
### HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. THOMPSON of New Jersey. Mr. Speaker the educational policy in international affairs of the Federal government should be more clearly defined and it should, in addition, be directed by one Federal department.

Legislation for this purpose has been introduced in the Senate and House. This legislation would, in addition, provide for the appointment of an assistant to the Secretary of State to assure joint policy and planning and the equitable budgeting of exchange-of-persons programs and administrative cooperation between staffs engaged in carrying out such programs.

Senator J. WILLIAM FULBRIGHT and Senator HUBERT H. HUMPHREY have jointly sponsored this legislation in the Senate. In the House the gentleman from New York [Mr. WAINWRIGHT] and the gentleman from Pennsylvania [Mr. FULTON] have joined me in sponsoring this significant legislation.

I include here the text of a supporting letter I have received from the Assistant Secretary of State William B. Macomber, Jr., as well as an excellent article written by George W. Oakes which appeared in the Washington (D.C.) Sunday Star of March 22, 1959. The text of the bill we are sponsoring is also included here:

DEPARTMENT OF STATE,
*Washington, December 8, 1958.*

The Honorable FRANK THOMPSON, Jr.,
*House of Representatives.*

DEAR MR. THOMPSON: Last year the Department endeavored to obtain, through legislation which you sponsored, the establishment of the position of a Special Assistant to the Secretary for International Cultural Relations. As you know, the Department has for some time recognized the need for the creation of such a high level position, to be filled by Presidential appointment by and with the advice and consent of the Senate, in order to achieve the important objective of having a coordinated, Governmentwide effort in the field of our exchange-of-persons and other cultural programs with foreign countries.

In the last session of Congress S. 3112 (companion bill to H.R. 10031), providing for the establishment of such a position, passed the Senate but was not acted upon by the House. The urgent need for having a Special Assistant to the Secretary, however, remained.

In order to deal with the problem on an interim basis, and until legislation can be obtained which will give this position the status which the Department believes it should be accorded, there has been created within the Department by Executive order the position of Special Assistant to the Secretary for the Coordination of International Education and Cultural Relations at the

GS–18 level. The Honorable Robert H. Thayer, former Minister to Rumania, who has more recently served as special assistant to the Director of the Bureau of Intelligence and Research in the Department, has been selected to fill this position.

It is our hope that legislation similar to S. 3112 can be obtained in the next Congress. Knowing of your deep interest in this matter, I hope that we may continue to look to you for assistance in this regard.

If you should wish to discuss this matter at further length, I shall be happy to meet with you at your convenience.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
*Assistant Secretary.*

---

H.R. 286

A bill to provide for the appointment of an assistant to the Secretary of State to assure joint policy and planning and equitable budgeting of exchange of persons programs and administrative cooperation between staffs engaged in carrying out such programs

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) there shall be in the Department of State an assistant to the Secretary of State to be known as the Assistant for International Cultural Relations (hereafter referred to in this Act as the "assistant"), who shall be appointed by the President by and with the advice and consent of the Senate.

(b) The annual rate of basic compensation for the position of assistant created by subsection (a) of this section shall be established by the Secretary of State in an amount not to exceed the annual rate of basic compensation established by section 106(a) of the Federal Executive Pay Act of 1956 for Assistant Secretaries of State.

SEC. 2. It shall be the duty of the assistant, under the general direction of the Secretary of State, (1) to coordinate the international exchange programs of the Department of State under section 32(b)(2) of the Surplus Property Act of 1944, as amended, the United States Information and Educational Exchange Act of 1948, as amended, the Mutual Security Act of 1954, the International Cultural Exchange and Trade Fair Participation Act of 1956, or other provisions of law relating to the exchange of persons, with a view to assuring joint policy and planning and equitable budgeting of such programs, and administrative cooperation between staffs engaged in carrying out such programs, and (2) to perform such other functions as may be assigned by the Secretary of State or prescribed by law.

---

[From the Washington (D.C.) Sunday Star, Mar. 22, 1959]

SCHOLARS AT HOME ABROAD—FOREIGN EDUCATION A BIG BUSINESS TO UNITED STATES

(By George W. Oakes)

International education has become such an extensive activity in Government that the need has arisen for its operations to be concentrated in one spot. The State Department has accepted the responsibility for dovetailing all the programs involving scores of governmental agencies, thousands of American and foreign exchange students. In money about $150 million a year is involved.

The State Department last December appointed a special assistant to the Secretary to fit together the many and varied programs now in operation and to devise ways of making them more effective.

Congress is interested too. During this session, under the leadership of Senators FULBRIGHT and HUMPHREY and Representatives FRANK THOMPSON, JR., JAMES G. FULTON, and STUYVESANT WAINWRIGHT, legislation is expected that will give the State Department statutory authority over other departments, to try to assure joint policy and planning of these multifarious international education activities.

The U.S. interest in international education dates from 1938 when the State Department formed a Division of Cultural Affairs. During the early war years Nelson A. Rockefeller put great stress on cultural and scientific exchanges with Latin America and thus laid the foundation for the present activity.

In 1946 Senator FULBRIGHT established an extensive academic program outside Latin America by using funds obtained from the sale of surplus war property. Two years later Congress authorized a permanent global education exchange program.

In January Representative PORTER HARDY, JR., of Virginia, chairman of the International Operations Subcommittee of the House, published a voluminous report describing in detail present Government programs. It suggested that Government policy in international education be more clearly defined and directed by one department.

Now the State Department is collecting data from all agencies concerned and also is informing itself on the many private operations carried out for many years by foundations like Ford, Carnegie, and Rockefeller.

THE LARGEST PROJECTS

The Government's two largest programs are conducted by the State Department's International Educational Exchange Service and the International Cooperation Administration.

In the State Department the Fulbright and leader-grant programs, in operation for a decade, bring annually to the United States about 4,000 foreign students, teachers, lecturers, and specialists from 80 countries and send about 2,000 Americans overseas.

The ICA technical assistance program arranged last year for some 5,600 foreigners from about 60 countries to receive special training in the United States and sent 500 non-Government specialists abroad.

Yet these Government programs, plus those conducted by such diverse organizations as the Defense Department, Public Health Service, Atomic Energy Commission, National Science Foundation, and Library of Congress, are responsible for only a small proportion of the 47,000 students, 7,500 doctors, and 1,400 faculty members who will be studying in the United States this year.

Nearly 70 percent of these visitors will be supported by their own funds or by private organizations, according to the Institute of International Education, the chief organization in this country concerned with both Government and private programs.

Although the present number of foreign students in the United States is almost twice as many as 10 years ago, it still is only 1.5 percent of our total higher education student population. In Britain, for example, 12 percent of the students are from foreign countries. To have the same proportion of foreign students enrolled here as in England or France would mean a foreign student population of 400,000.

A third of all foreign students in the United States come from the Far East. Twenty-one percent come from Latin America. As might be expected, Canada, with over 5,000, sends more than any other country.

EXCHANGES WITH RUSSIA

The State Department's most significant exchange activity this past year has been the new program with Russia.

Here is the way it has developed—January 28, 1958, to January 26, 1959:

| | Americans to U.S.S.R. | Soviets to United States |
|---|---|---|
| Scientific and technical | 392 | 267 |
| Cultural, including sports and entertainment | 355 | 254 |
| Academic | 205 | 44 |
| Total | 952 | 565 |

These exchanges ranged from cotton growers to pediatricians, from geologists to foresters, from architects to veterinarians. Most of them stayed for relatively brief periods of time, varying from days to a few weeks. However, there are now 22 American graduate students enrolled in two Soviet universities for the 1958–59 academic year and 17 Russian students in 5 American universities. At Columbia, for example, three are studying American history and one journalism.

In many ways the international education activities of ICA—largely of a technical training nature—are the most widespread in that they affect more different U.S. Government departments. Hence this may be the area in which the State Department may have the widest scope. Essentially, ICA's education activities involve training foreigners in the United States and third countries, as well as supplying U.S. technical advisers and funds to foreign education systems and institutions.

The program whereby American universities, under contract with ICA, loan their outstanding experts to guide the economies and governments of underdeveloped countries is perhaps one of the most useful, as well as least expensive, of any now in operation. These specialists conduct education research and training programs in economics, engineering, medicine, agriculture, public and business administration.

Acting on the conviction that many Far Eastern countries must develop a competent civil service in order to survive, University of Indiana professors in Thailand have been trying to revise concepts of civil service and public administration. Also, in the Philippines, the University of Michigan and the University of the Philippines have established an Institute of Public Administration to instruct officials and render advisory services to the Government.

TRAINING IN TAIWAN

In Taiwan Purdue University has trained hundreds of Chinese engineers to assist its industrial development. This project meant furnishing engineering professors to advise Cheng Chung University in modernizing its courses, laboratories, textbooks, and library facilities.

In India, where basic knowledge of nutrition is hardly known, University of Tennessee specialists have helped Indian educators improve college curricula in home science and train hospital dietitians and home economics workers.

However, many opportunities are missed because American university faculties, hard pressed by increasing student bodies, meet considerable domestic resistance to detaching their staff for overseas duty. It is estimated than 300 from the University of California faculty alone are now abroad.

Not long ago an Indonesian Government request to the University of California for six government administration specialists to work with their cabinet secretariat had to be refused. Yet participating American universities have found that such foreign experience has broadened the knowledge of their faculty and thus improved their teaching and research performance at home. From a practical viewpoint, Cornell University learned certain agricultural tech-

niques working in southeast Asia that have ben useful in upstate New York.

Educators believe it important to mesh the technical training and academic programs. For example, more Indian philosophers, poets and intellectual leaders should come to the United States not only to widen our horizons but also to make Indians feel that we are not trying to dominate their culture but that we recognize that education exchange can be mutually beneficial.

As the State Department prepares to exert its leadership role, it faces the task of devising an international education policy that will develop fully our national potential—both public and private—in line with our foreign policy without impairing our long-range cultural programs that have won worldwide recognition.

## The LULAC's Advocate a Bridge at El Paso, Tex.

EXTENSION OF REMARKS
OF
### HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 24, 1959*

Mr. YARBOROUGH. Mr. President, the term "citizen" has a multitude of meanings. It can mean simply a resident of a particular country, or the word can denote a person who takes his responsibilities to his Nation and his neighbor seriously and earnestly works at living a life which will make the world a better place.

It is in the latter category that the members of the League of United Latin American Citizens are placed. This organization is composed of men and women who take their citizenship seriously. They studiously keep themselves informed on the activities of their local, State, and National governments and carry on a number of projects for the betterment of their communities and their country.

Mr. President, as an example of the interest which the members of LULAC take in civic affairs, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution set out in a letter, dated February 21, 1959, which I received from LULAC Council No. 132 in El Paso, Tex.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LEAGUE OF UNITED LATIN AMERICAN CITIZEN,
*El Paso, Tex., February 21, 1959.*

Hon. RALPH W. YARBOROUGH,
*Senate Office Building,*
*Washington, D.C.*

DEAR SENATOR YARBOROUGH: At our regular meeting today, a motion was unanimously passed to write to you regarding the need for another bridge between El Paso and Juarez.

We feel that there are selfish interests that for years have caused undue hardship on the people of our city, as well as on our friendly neighbors to the south.

It is our understanding that those opposed to another bridge have powerful lobbies both in Washington and in Mexico City. However, we believe that in this great country of ours, the lobby of the people is still the strongest lobby, and that you will put forth every effort to see that permission is obtained to open another port of entry, and we feel that the Cordova Island entry is the immediate solution to the problem.

Yours sincerely,
RAUL O. REYNA,
*President.*
A. F. KENNARD,
*Chairman, Public Relations Committee.*
DR. FRANCISCO LICÓN,
*National Director of Health for LULAC.*
CONRAD P. RAMIREZ,
*Trustee.*

## Celebration of the 41st Anniversary of Byelorussia's Independence

EXTENSION OF REMARKS
OF
### HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. DORN of New York. Mr. Speaker, on Sunday, March 22, Americans of Byelorussian descent celebrated the 41st anniversary of the independence of Byelorussia.

The history of the struggle for independence by Byelorussian people was long, constant, sacrificial, dedicated and determined, marked with armed uprisings and reflected in most of the Byelorussian literature as well as being led and inspired by all of the national leaders and supported morally by many neighboring countries.

On March 25, 1917, the Byelorussian Rada assembled in Minsk declared an independent Byelorussian Democratic Republic, thus marking the end of occupation.

Unfortunately the Byelorussian Democratic Republic was short lived. Once again the Russian Army under a new slogan of communism overran the country and forced the first Byelorussian Government into exile. However, neither the difficult path of exile nor countless persecutions that followed on Byelorussian territory swayed the firm stand of the Byelorussian people.

The declaration of independence gave to every Byelorussian a special sacred meaning of freedom, a special respect and loyalty to all free nations seldom experienced by other peoples.

So this year on March 22, Americans of Byelorussian descent, marked the day of the independence of Byelorussia extending their brotherly hand to all men of Byelorussia who never yielded to the will of any aggressor.

I hope that Byelorussian Independence Day will be celebrated each year not only by Americans of Byelorussian descent but by all citizens and all men who value, respect and jealousy guard freedom.

## Hon. John H. Dent Honored

EXTENSION OF REMARKS
OF
### HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. LIBONATI. Mr. Speaker, it is with a feeling of personal pride and admiration that I ask the Members of the House to bear with me in this request to extend my remarks in the Appendix of the RECORD touching upon the recent affair given in honor of the ever popular Pennsylvanian, Congressman JOHN H. DENT, by his fellow townsmen.

We have every right to celebrate with him on this occasion of his public acceptance and acclaim. Recently it has been rather difficult to bow acceptance to the publicity tending to fordo the political future of its victim. The Congress applauds Mr. DENT with a cheer and a prayer—Well done, my lad.

The distinguished reporter, Jack Carlton of the Greensburg Tribune-Review issue March 20, covered the banquet with the superlative zest of the master in painted words of human praise:

JEANNETTE HONORS CONGRESSMAN DENT—FAVORITE SON FETED AT BANQUET—JAMES ROOSEVELT IS TOP SPEAKER; DENT GIVEN GIFTS

(By Jack Carlton)

More than 1,200 persons, including national, State, county, and municipal leaders, jammed the Jacktown Hotel last night to help the community of Jeannette pay high tribute to a favorite son—Congressman JOHN H. DENT.

Occasion for the ringing salute was the Jeannette Chamber of Commerce-sponsored DENT testimonial dinner—an affair that was billed as the community's way of telling the dapper ex-glassworker—"JOHNNY, we're proud of you."

Jeannette paid its tribute to the county Congressman with gifts, a pictorial narration of his life, and a long list of outstanding speakers headed by DENT's colleague, Congressman JAMES ROOSEVELT.

ROOSEVELT APPLAUDED

ROOSEVELT, son of the late President Franklin D. Roosevelt and Representative of the State of California, climaxed the evening's program with an applause-punctuated address. His remarks ranged from verbal salutes to DENT to reflections upon the national and international scene.

The visiting Congressman told the overflow audience that this Nation has overcome great difficulties in the past but today is again being challenged. "We are now engaged in a fight for freedom," he warned.

The United States greatest need is to be strong at home, ROOSEVELT held. He charged that the Nation's chief challenge is to find ways to gain this internal strength, saying, "We must be strong first at home."

WANTS JOBS PROTECTED

ROOSEVELT revealed that he plans to join with Congressman DENT in the battle to see that peoples from overseas do not take jobs away from Americans.

There is presently a bill before Congress, ROOSEVELT said, which would encourage American investment and industrial build-

ing abroad. He held that this bill, if passed, would mean that the investor will grow rich while Americans grow poor.

"This will not happen as long as JOHN DENT and people like him are on guard in Congress," ROOSEVELT said.

ROOSEVELT voiced his support of the Eisenhower administration's stand on the Berlin issue. He said he believed all Americans were behind the U.S. position.

TRIBUTE TO DENT

In paying tribute to DENT, ROOSEVELT pointed out that tradition holds a man is never honored in his hometown. DENT has broken this tradition, he said.

The California Democrat pointed to the story of DENT's rise to Congress as the story of the United States. He concluded by saying that he hoped he might have the honor to serve under Congressman DENT in the future.

Ginger Joyce, executive director of the Jeannette Chamber of Commerce, served as narrator for the pictorial story of Congressman DENT'S rise from glassworker to the Nation's Capitol. Pictures of DENT and his family were shown throughout the narration.

COLORFUL CAREER

Miss Joyce, who referred to DENT'S career as "so colorful that it rivals the TV westerns," concluded by telling the honored guest: "You have built a monument to your city, your family, your country, and yourself which the sands of time cannot erase."

Gifts were presented to the former State senate minority leader throughout the narration. Included in the presentations were: A key to the city, awarded by Jeannette Mayor A. B. Elias and a certificate naming DENT ambassador No. 1, presented by William Smith of the Greater Jeannette Chamber of Commerce.

Robert Ivanoff, vice president of the Jeannette Junior Chamber of Commerce, gave DENT a certificate naming him Jaycee international senator, an honor held by only six other Pennsylvanians.

PLAQUES PRESENTED

Plaques were presented to the Jeannette man by President Dick Rhea, of Greensburg, for the Central Westmoreland County Labor Union Council, AFL–CIO; Willis Gilkey, for the Jeannette Teachers' Association, and Louis Castellano, for the United Rubber Workers Local 22, of Jeannette, which DENT formed.

A camera, projector, screen, and film showing proceedings at the entire dinner were presented to DENT by James Abraham, general chairman of the event, on behalf of the Congressman's friends.

Gifts were also given by M. G. Shevchik, for the Jeannette District Memorial Hospital, and Mayor R. E. Gardlock, for the city of New Kensington.

Gardlock also gave gifts to ROOSEVELT and Allegheny County Judge Samuel A. Weiss, toastmaster for the evening. The same two men also received gifts from the Jeannette Chamber of Commerce.

WEISS TOASTMASTER

Weiss, in his role as toastmaster held that "DENT'S humility is unchallenged." He told the audience that it was a deserved tribute to a fine fellow.

The toastmaster called on A. B. Elias, mayor of Jeannette, who praised the honor guest and pointed out that JOHNNY has come a long way since leaving the council chamber of Jeannette.

Remarks were also made by James Abraham, general chairman of the event, and Norman Berger, president of the Jeannette Chamber of Commerce.

Congressman DENT, obviously moved by the salute, also spoke briefly. He told his audience that Jeannette had meant a great deal to him. "I'm proud of this town," he said.

The former State lawmaker held that he has always felt that what was good for Jeannette was good for all Americans.

DENT also extended his grateful appreciation to JAMES ROOSEVELT, the son of a great man, for taking the time to appear at the affair.

"If a man could live forever," DENT concluded, "I would want to live it with you."

J. H. Millstein, cochairman of the dinner, introduced the honor guests at the speaker's table. They included: Father James Imhof, OSB, of the Ascension Church, Jeannette; Dr. R. W. Huntsman, of the Jeannette First Methodist Church; Rabbi Cadish Waldman, of the Chevra Sholom Synagogue, Jeannette; William Smith, of the chamber of commerce; Mrs. Donald Sarp, DENT'S daughter; DENT'S son, Fred, and wife, Margaret "Babe" Dent; Norman Berger; Mayor Elias; Jim Abraham; Judge John M. O'Connell, and Mrs. Samuel Weiss, wife of the toastmaster.

MANY INTRODUCED

Representatives of more than 40 labor groups, municipalities, State legislative bodies and departments, and various other local and county organizations were also introduced during the program.

Toastmaster Weiss paid high tribute to the Westmoreland County Common Pleas Court during the dinner. In an unusual gesture, the Allegheny County judge called for a moment of silent prayer in memory of the late Judge Edward G. Bauer.

The St. Vincent General Assembly, Knights of Columbus, served as color guard for the banquet. John Umek led the audience in the singing of the national anthem to open the program.

Preceding the dinner, a press conference was held in the basement of the hotel.

Congressman ROOSEVELT, key speaker at the banquet, was delayed in his arrival. Jeannette Chamber of Commerce officials explained that he had been forced to postpone his departure because of key legislation on the floor of Congress yesterday afternoon.

## How Business Operates Not by Price Fixing

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, fair trade, the setting of retail prices by manufacturers would be a death blow to free enterprise, and the countless blessings enjoyed by consumers because of mass production, efficiency, research, streamlined operation—all resulting from competition between manufacturers, where all take risk and some make it, some do not.

If the manufacturer is assured a certain price by law where then is the incentive to discover and remove inefficiency, ingeniously to devise new systems, new manufacturing procedures, techniques and tools, more production, more efficient distribution? In free enterprise competition keeps the industries on their toes. Sure, it is a battle for survival. The customers must be pleased—a better product at a lower price with quicker delivery with better service and warranties, countless courtesies, advertising schemes, window displays. From raw material to customer's home competition drives each manufacturer, distributor, and dealer to do his best to please the consumer, who must be pleased at the right price or no sale.

Well, we can set prices by law but they will not stick. Before John Doe rebels the damage will be poorer products at higher prices, slower service, less striving to please, less volume, less efficiency and finally more bureaucratic laws to undo the damage of bureaucratic laws until in the struggle the whole system slips beneath the quicksand. Fair trade? Hardly.

## Unemployment Situation Remedies

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting, forthright, and truthful editorial which appeared in the Evening Tribune of Lawrence, Mass., on March 21, 1959:

UNEMPLOYMENT SITUATION REMEDIES

The Eisenhower administration is counting on a spring and summer boom to reduce unemployment. Even if this materializes, it will not help the many areas with chronic unemployment conditions. These include Lawrence, Lowell, Fall River, and North Adams in our own State, all of which, at last reports, had 6 percent or more unemployment. Haverhill and Newburyport also are listed as having a labor surplus.

This much is encouraging. President Eisenhower is awaiting the advice of nine Governors before deciding whether to favor proposals concerning an extended Federal-State unemployment compensation program.

Behind the scenes is U.S. Labor Secretary Mitchell seeking administration support for Federal action to improve this method of helping the jobless.

Mitchell will get plenty of support. A conference of trade union leaders from all parts of the Nation, including 250 from New England, will take place in Washington on April 8 to seek action by Congress and the administration to alleviate unemployment.

Federal aid is being sought for a number of labor surplus areas. Legislative ears in Washington are bound to listen more than in previous years to the argument that chronic industrial blight has hit these sections through no fault of their own but because of shifts in the economy. They should.

In Congress, the pressure is on to renew last year's unemployment insurance extended benefits, due to expire at the end of this month. If they end 350,000 unemployed, including thousands in Massachusetts, will lose their payments.

In addition, there are two so-called area redevelopment bills pending in Washington which would help to lighten the burden of chronic unemployment. Mayor Buckley appeared in the Nation's Capital recently as a

representative of the U.S. Conference of Mayors in support of such legislation.

It is paradoxical that while the Nation's economy seems quite healthy, there are important areas of serious and sustained unemployment. New England, which contributes more to the Federal coffers than it receives, has plenty of communities which need assistance.

Affirmative decisions furnishing such aid may run counter to the views of Republican conservatives in Congress, and it's the type of situation that may hatch liberal measures. However, such legislation would be popular. Vetoes would be unpopular.

The AFL–CIO's demonstration in Washington early next month on unemployment can be expected to carry much weight. It will put the spotlight on communities where plenty of people are jobless, smack in the middle of recovery and prosperity for the country, generally. It is hoped that Congress can and will do something about the chronic unemployment situation.

## Mutual Security

EXTENSION OF REMARKS

OF

### HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Moline Daily Dispatch of March 18, 1959:

MUTUAL SECURITY

President Eisenhower, in his address to the Nation Monday night, made reference to the need for continuing military assistance to other nations.

He said: "If the United States, alone, had to carry the full burden of defending its interests from the Communist threat, we would have to draft a much larger portion of our manhood into the armed services, spend many more billions of treasure and put a more intense strain on all our resources and capabilities.

"We would become more and more like a garrison state.

"Fortunately we do not have to adopt such a desperate course. Nearly 50 nations have joined with us in a cooperative effort to protect freedom. This system of mutual security allows each nation to provide the forces which it is best able to supply."

Behind these words lies a very important aspect of the U.S. foreign aid program. In this respect, foreign aid is a misnomer.

The aid the United States extends to other countries for military purposes is calculated to protect the United States as much as those countries. The money goes to garb and equip fighting men of other nations, to provide them with ordnance and vehicles and to assist in training them. The general idea is that if soldiers of other nations were not set up to fight, their places would be occupied by American fighting men. As it is, hundreds upon hundreds of Americans in uniform are scattered about the globe.

Why are any soldiers needed to protect American interests in foreign lands?

First, they protect American property and American lives, not only governmental property and lives but also commercial property and private lives. American interests and holdings overseas are enormous.

Second, they discourage border aggressions in the hundreds of spots in the world where the Communists seek the weak places in the armor.

Third, they constitute a ready force for retaliation should war come.

The American fighting man is the most expensively equipped and expensively maintained in the world, commensurate with the high American living standard. As high as 10 fighting men in other nations can be equipped and maintained for the cost of 1 American. Taxwise, it makes sense to get the most protection for the least cost.

Then too, the more foreign nationals the United States can arm in their own countries, the better it looks for the United States from the standpoint of imperialism.

And the political pressures against sending many more American boys overseas in uniform in peacetime would probably be too great to withstand.

As long as there is need for mutual security, it is fitting that is is mutual. The alternatives—either man the world's outposts with Americans or pull American interests and defense structures back into Fortress America—are only academically interesting.

## Uncle Sam Was Real

EXTENSION OF REMARKS

OF

### HON. LEO W. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. O'BRIEN of New York. Mr. Speaker, Uncle Sam was a real person who lived and died in Troy, N.Y.

This lovable character, so close to our deepest patriotic feeling, was not a creature of a cartoonist's pen, but a man who loved and was loved; a man who served his country and helped to develop its strength.

The people of Troy, in a patriotic endeavor, are urging this Congress to recognize that their Uncle Sam Wilson is and was our Uncle Sam. In that connection, a recent editorial in Life magazine is apropos. It follows:

UNCLE SAM ON TRIAL

THE COURT. Defendant will take the stand and be sworn.

DEFENDANT. My name is Uncle Sam, sometimes called U.S. for short.

THE COURT. The prosecutor will read the indictment.

PROSECUTOR. Now comes Allan Nevins, professor of history at Columbia University, who deposes and says of Uncle Sam (cf: New York Times magazine, March 1, 1959), "It is time the most complicated nation on earth disowned this crude stereotype. * * * Invented during the war of 1812, he is altogether too much the rural Yankee or Yorker type. He is obviously of the same breed as the men who marched to Concord and Saratoga."

UNCLE SAM. I was there. Right by the rude bridge.

PROSECUTOR. "* * * as the deacon who built the one-hoss shay * * * and David Harum.

UNCLE SAM. Knew David well. Cheated him on a horse trade.

PROSECUTOR. "He is out of date because his world is gone. * * * He lacks the grace [of] a southern gentleman * * * the breezy buoyancy of a Texan * * * the concentrated energy of the modern industrialist."

UNCLE SAM. Sam Houston was my nephew. Andrew Carnegie was my adopted son.

PROSECUTOR. "Nobody can believe that the Declaration of Independence, Gettysburg Address, and Second Inaugural are bottled up in that prosaic figure."

UNCLE SAM. These Congress gaiters are a bit worn.

PROSECUTOR. "In him we see no sublime rages, no wild aspirations. He is obviously a plain democrat."

UNCLE SAM. I plead guilty to that.

PROSECUTOR. "When stereotyped thinking and cheap prejudices are cast on the rubbish heap, the belief that an infantile folk image like Uncle Sam has any meaning will follow."

THE COURT. How says the defendant?

UNCLE SAM. Sometimes when a fellow likes a job real well he outgrows his usefulness without realizing it. Maybe I'd better hang up my old stovepipe hat, wrap these tattered stripes around me, and lie down to pleasant dreams. But who can dream during this Berlin thing? Not me. Anyway I've got to attend a couple of christenings, in Alaska and Hawaii. Somehow my family keeps growing.

THE COURT. How says the jury?

JURY. We find the defendant guilty of patriotism, devotion to duty, Yankee thrift, native shrewdness, stubborn pertinacity, mechanical ingenuity, bighearted generosity, hard work, calluses, and raising a free nation out of a wilderness.

THE COURT. Uncle Sam, I sentence you, at 12:01 a.m., on July 4, 1959, to raise a flag containing 50 stars above Fort McHenry, Md., to hang there in your charge day and night, so long as you shall live.

## The Good Old Days

EXTENSION OF REMARKS

OF

### HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. HARRISON. Mr. Speaker, a constituent has sent me a document which is a mute but effective commentary on the state of our Federal finances. It is a Federal income tax form for 1913, the first year for which such a tax was levied, pursuant to the 16th amendment to the Constitution.

In contrast to the involved forms with which we have to struggle today, the 1913 return was fairly simple. The personal exemption was $3,000 in the case of a single person and $4,000 in the case of a married individual. All dividends were deductible. The basic tax rate was 1 percent on net taxable income. The surtax rate was 1 percent on net taxable income over $20,000 but not exceeding $50,000; 2 percent on net taxable income over $50,000 but not exceeding $75,000; 3 percent on net taxable income over $75,000 but not exceeding $100,000; 4 percent on net taxable income over $100,000 but not exceeding $250,000; 5 percent on net taxable income over $250,000 but not exceeding $500,000, and 6 percent on net taxable income over $500,000.

As a sidelight on tax history, Mr. Speaker, I include the first page of the Federal income tax return form for 1913:

TO BE FILLED IN BY COLLECTOR.

List No. ----------

Date received ----------

Form 1040.

INCOME TAX.

THE PENALTY

FOR FAILURE TO HAVE THIS RETURN IN THE HANDS OF THE COLLECTOR OF INTERNAL REVENUE ON OR BEFORE MARCH 1 IS $20 TO $1,000.

(SEE INSTRUCTIONS ON PAGE 4.)

TO BE FILLED IN BY INTERNAL REVENUE BUREAU.

File No. ----------

Assessment List ----------

Page ---------- Line ----------

UNITED STATES INTERNAL REVENUE.

RETURN OF ANNUAL NET INCOME OF INDIVIDUALS.

(As provided by Act of Congress, approved October 3, 1913.)

RETURN OF NET INCOME RECEIVED OR ACCRUED DURING THE YEAR ENDED DECEMBER 31, 191....

(FOR THE YEAR 1913, FROM MARCH 1, TO DECEMBER 31.)

Filed by (or for) ---------- of ----------

(Full name of individual.) (Street and No.)

In the City, Town, or Post Office of ---------- State of ----------

(Fill in pages 2 and 3 before making entries below.)

| | |
|---|---|
| 1. GROSS INCOME (see page 2, line 12) | $ |
| 2. GENERAL DEDUCTIONS (see page 3, line 7) | $ |
| 3. NET INCOME | $ |

Deductions and exemptions allowed in computing income subject to the normal tax of 1 per cent.

| | |
|---|---|
| 4. Dividends and net earnings received or accrued, of corporations, etc., subject to like tax. (See page 2, line 11) | $ |
| 5. Amount of income on which the normal tax has been deducted and withheld at the source. (See page 2, line 9, column A) | |
| 6. Specific exemption of $3,000 or $4,000, as the case may be. (See Instructions 3 and 19) | |
| Total deductions and exemptions. (Items 4, 5, and 6) | $ |
| 7. TAXABLE INCOME on which the normal tax of 1 per cent is to be calculated. (See Instruction 3) | |

8. When the net income shown above on line 3 exceeds $20,000, the additional tax thereon must be calculated as per schedule below:

| | INCOME. | TAX. |
|---|---|---|
| 1 percent on amount over $20,000 and not exceeding $50,000 | $ | $ |
| 2 " " 50,000 " " 75,000 | | |
| 3 " " 75,000 " " 100,000 | | |
| 4 " " 100,000 " " 250,000 | | |
| 5 " " 250,000 " " 500,000 | | |
| 6 " " 500,000 | | |
| Total additional or super tax | | $ |
| Total normal tax (1 percent of amount entered on line 7) | | $ |
| Total tax liability | | $ |

## Payments in Lieu of Taxes

EXTENSION OF REMARKS

OF

## HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 24, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the city commissioners of the city of Fargo, N. Dak.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Commissioner Hagen offered the following resolution and moved its adoption:

*"Be it resolved by the Board of City Commissioners of the City of Fargo:*

"Whereas there is now before the 86th legislative assembly of the United States of America a bill providing for payment in lieu of taxes which would authorize payments to local governments of sums in lieu of taxes and special assessments with respect to certain Federal property, being Senate bill No. 910, upon which hearings have been scheduled for March 19 and 20, 1959, before the Senate Government Operations Committee; and

"Whereas the passage of said bill will be of great benefit to all municipalities of the United States of America, Now, therefore, be it

"*Resolved*, That the Board of City Commissioners of the City of Fargo, N. Dak., hereby strongly endorses said bill and urges its passage, and be it further

"*Resolved*, That a copy of this resolution be forwarded to the Honorable JOHN L. MCCLELLAN, chairman of the Senate Government Operations Committee, to the office of the American Municipal Association, Washington, D.C., and to the North Dakota legislative delegation in Washington, D.C., and that telegrams be dispatched to the above urging the passage of said bill."

## Fair Trade a Misnomer

EXTENSION OF REMARKS

OF

## HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, fair trade, the setting of consumer prices by manufacturers under Federal mandate, is a misnomer. The language is as unfathomable as Washington gobbledygook can contrive. What means "unfair and deceptive acts" or "satisfy the needs of ultimate consumers" or "prices that are adequate"? Unscrambling the meaning and intent will assure all attorneys more business than they can handle and be a field day for the courts, and they do not need the business.

Heavy litigation and court redefining or legislating the intent of Congress will be the end result if Congress passes the fair trade bill, H.R. 1253.

## Fair Trade Anachronism

EXTENSION OF REMARKS

OF

## HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, the fair trade is a legislative anachronism. The language of the bill would do credit to the Government control of socialism. At the least it contains the bureaucratic dictation of the planned economy concept, not free enterprise. What is meant by such phrases as "prices that are adequate to stimulate said distribuion and low enough to enable distributors of such identified merchandise to compete effectively with those market-

ing goods of the same general class and to satisfy the needs of ultimate consumers."

Now, what does this mean? Prices "high enough to"—"or low enough to"—and who is so wise to know what to prescribe by legislative edict? What means the phrase "of the same general class" or "to satisfy the needs?" And who will play the Almighty in giving the answers?

The answers can be found only in the market place where merchandise in competition is selected or rejected for a price or for bargaining between seller and buyer. Thousands of transactions daily provide the answer—not a bureaucrat, nor we in Congress assembled.

## Farmers Union Seeks Agriculture of Farm Families on Family Farms

EXTENSION OF REMARKS
OF
## HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. JOHNSON of Wisconsin. Mr. Speaker, when the National Farmers Union held its 57th annual meeting in Springfield, Ill., this month, the delegates adopted a statement of purpose which sums up their—and my—belief in the dignity of the individual, family-type farmer, a man who seeks nothing but a chance to use his abilities to the fullest in his own behalf as a useful member of our democratic society. This statement has special significance in these confused times when bigness is frequently mistaken for greatness. Under leave to extend my remarks, I would like to include the National Farmers Union's statement of purpose in the RECORD:

THIS WE BELIEVE

The Farmers' Educational and Cooperative Union of America (National Farmers Union) is a private association of farm operating and other rural families. We are joined together to do in combination what we would be unable to do separately.

AIMS AND PRINCIPLES

The basic aims of National Farmers Union are derived from our understanding of the laws of nature and of God. Living in rural America, we live close to nature. Our occupation depends on its life-renewing forces. Our livelihood requires its understanding. Our observation of nature's work gives us a thoughtful respect and a profound regard for the essential dignity of the individual human being. We reaffirm our convictions of the truth and rightness of the ideals expressed in the Declaration of Independence and in the Constitution of the United States and its Bill of Rights. We are opposed to the principles and practices of totalitarian dictatorship whether in Communist, Fascist, or any other form.

*A. Inherent human rights*

We, in Farmers Union, are convinced that all men are created equal; that each is born important in his own right, without distinction or discrimination.

1. Freedom of expression: We shall strive to preserve and expand freedom of thought, freedom of speech, radio, television, and press, freedom of the secret ballot, freedom of religion, freedom of assembly, freedom to organize, and freedom to petition the Government for redress of grievances.

2. Equality of opportunity: We assert the right of each person to an equal educational opportunity, and to an equal opportunity to choose his own living; to spend, save, invest, and own property, to make his working and saving efforts and his property count for the benefit of himself and his family toward the attainment of their aspirations to the extent of his ability to do so without encroaching upon the equal opportunity of others.

3. Adequate standards: We are convinced that in this land of plenty, no person should be compelled by circumstances beyond his control to fall below an adequate standard of the necessities, conveniences, and comforts of life.

*B. Family is basic*

We are convinced that the family is the primary and basic unit of human society and should be preserved, strengthened, and enriched.

*C. Democracy essential*

We are convinced that the inherent rights of man can be attained and protected only in a self-determining, self-restrained democracy. We recognize the need of government, the one cooperative endeavor embracing us all, to protect the rights of expression, to ensure equality of opportunity and to perform such service as can more efficiently be performed by people as a whole, rather than as individuals, private groups, or cooperative business activities.

It is our abiding determination to preserve and further improve the democratic nature of our governments. To safeguard our representative democracy, we believe in government by law, not by men outside of law. We reject completely the idea of government by any elite managerial, scientific, military, or any despotic group or totalitarian dictatorship. We shall continue to oppose all the efforts of all who seek to retain or impose dictatorship government on this or any other nation.

1. Equal voice: Democracy is designed to give each person an equal right to take part in making governmental decisions personally and through representatives of his own selection. We are convinced that all the people should have a voice in determining our laws and selecting the leaders of government. Each person is the best judge of his own best interests.

2. Responsive government: Democratic government is the only form of government through which the people by peaceful means can maintain freedom of expression and equality of opportunity. It is the only form of government that takes on new jobs and drops outmoded activities solely in response to the expressed needs and desires of the people. The checks and balances, the division of governmental powers, are necessary to the preservation of responsive representative government. By such means, we protect the rights of minorities, guard against the development of a totalitarian or despotic elite, and prevent the concentration of economic and political power in a few hands, thereby preserving the opportunity of our people to preserve their rights and freedom.

3. Citizenship: We, in Farmers Union, assert our willingness to assume the full citizenship responsibilities involved in the exercise of our democratic rights.

*D. World affairs and U.S. foreign policy*

We are convinced that the foregoing principles have universal application, that these are aims which reflect the aspirations of people everywhere.

Farmers Union will continue to strive for the earliest possible attainment of a democratic world brotherhood of nations, operated on principles consistent with the Constitution and the Bill of Rights, living at peace with one another in a United Nations that derives its just governmental powers directly from the people of the world and provide the basis and opportunity for constantly increased production and improved living standards.

The trend of world events has thrust the responsibility of world leadership on he United States. We reaffirm our support of United States' efforts to assist in expansion and strengthening of the productive capacity and living standards of other nations in ways that will help them move toward democratic form of government. We emphasize the great importance and decisive role that abundant U.S. food production can play in the implementation of these policies. Until such time as a world brotherhood is fully established, a free democratic nation has the responsibility, through the United Nations, to protect itself and weaker nations against aggression.

*E. Expanding economy of abundance*

We are convinced continuously expanding national and world economies of ever greater abundance are absolutely essential to the improvement, extension, and preservation of representative democracy and to the ultimate atainment of permanent world peace. Democracy must, and ultimately will, extend enriched individual dignity, expanded economic opportunity and increasing material well-being to all people. Governments, private groups, families and individuals should continually promote the ever-greater attainment and ever-wiser use of growing abundance. We need to improve family living conditions in the United States and throughout the world.

*F. The land: Heritage of an entire Nation*

We believe that the land, water, and other natural resources should be used and conserved by its owners and operators in a manner to pass it on undiminished to future generations.

*G. Family farming bulwark of democracy*

We are convinced that farm families on family farms are an esential balancing force in the social and political structure that is vital to the stability, preservation, and improvement of representative democratic government, of an efficient and productive economic system, and of a satisfying world society.

On the family farm, the business and home are one. The family is owner of capital, borrower of funds and accumulator of savings, manager of home and business and the major source of labor. The child grows up with opportunity for well-rounded knowledge of life, nature, business, and home. He learns the meaning of ownership and the security of place called home.

Grave danger to democratic institutions would result if we allow our entire population, including agriculture and small business, to become divided into separate groups of owners, managers, financiers, and workers.

*H. Parity farm income*

We assert the right of farm families to earn and receive income from their work, management, and property ownership equivalent to that earned and received by people in walks of life from similar productive resources.

*I. Enriched rural neighborhoods and communities*

Successful rural family living depends upon the existence of strong rural neighborhoods and communities. We will work for the development in rural areas of adequate cultural centers including: stronger churches and other religious centers, improved local governments, better schools, provisions for local discussion forums for all citizens, rural libraries and art centers, and healthful rural recreation centers.

*J. Cooperatives*

We are convinced that cooperatives and the cooperative technique and other nonprofit forms of private corporate economic organization have a uniquely significant role to play in building a better world and better farm life as well as to strengthen the economic position of farmers and other citizens.

*K. Rural organization*

We shall strive to preserve and strengthen National Farmers Union as a farm organization. We invite all farm families and all groups and persons who share our goals to join us in cooperative efforts to build better rural communities, socially and economically. We assert the right of rural people to set up organizations, under their control, to provide for themselves an informational and educational service supplemental to public schools and other educational activities and to serve as a major channel through which the right to petition government may be exercised.

*L. Summary*

We seek an agriculture of farm families on family farms, prosperous, efficient, masters of themselves, good stewards of the soil they till, standing on their own feet and seeking nothing of any man except a fair and equal chance to use their abilities to the fullest in their own behalf as useful members of a democratic society. We seek a like opportunity in life for our fellow man, both within our own country and in other lands. We believe that these aims can best be attained through combined individual and cooperative private action with and under programs of democratic government.

We seek this manner of life because it answers the need for a world that recognizes the equal dignity of every person as a means of fostering his unique worth and confers upon all alike the right to expression in word and deed without fear of unjust reprisal.

## Movement of Aircraft Across an International Border

EXTENSION OF REMARKS
OF
### HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution recently adopted by the State Legislature of Minnesota, a border State. This resolution represents the best thought of the legislature on the movement of aircraft across an international border:

RESOLUTION 2

Resolution memorializing the President of the United States and the Congress of the United States to take such steps as may be necessary to insure that private aircraft flying into or out of Canada be subject to the same inspection fee regulations of the U.S. Customs and Immigration Services as automobiles

Whereas private aircraft in increasingly large numbers are crossing Minnesota's northern border to and from Canada for business and recreational purposes; and

Whereas private aircraft crossing the border on Sundays or legal holidays are required by the U.S. Customs Service and U.S. Immigration Service to pay special overtime rates for crossing inspections, regardless of whether or not the port of entry is open; and

Whereas private automobiles are not required to pay special overtime rates so long as the port is open: Now, therefore, be it

*Resolved by the Legislature of the State of Minnesota*, That the President of the United States and the Congress of the United States, do all in their power to remove the special charges affecting private aircraft which cross the border, and provide a uniform system treating aircraft and automobiles on an equal basis; be it further

*Resolved*, That the secretary of state be instructed to transmit copies of this resolution to the President of the United States and to each Member of Congress from the State of Minnesota.

E. J. CHILGREN,
*Speaker of the House of Representatives.*
KARL F. RALVAAG,
*President of the Senate.*

Passed the house of representatives this 4th day of March 1959.

G. H. LEAHY,
*Chief Clerk, House of Representatives.*

Passed the senate this 9th day of March 1959.

H. Y. TANEY,
*Secretary of the Senate.*

Approved March 13, 1959.

ORVILLE L. FREEMAN,
*Governor of the State of Minnesota.*

Filed March 13, 1959.

JOSEPH L. DONOVAN,
*Secretary of the State of Minnesota.*

## Proposed Wage and Hour Legislation as It Might Be Applied to Agriculture Labor

EXTENSION OF REMARKS
OF
### HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, I include a letter to me from one of my many esteemed farmer friends, Mr. Herbert Pike, of Whiting, Iowa. In this letter he explains why the proposed increase in farm labor pay would be detrimental to all parties concerned. His letter follows:

WHITING, IOWA, *March 18, 1959.*

Hon. BEN F. JENSEN,
*House of Representatives,*
*Washington, D.C.*

DEAR MR. JENSEN: You asked that I express my views on the proposed wage and hour legislation as it might be applied to agricultural labor. First, may I say that farm wages have strengthened to the point where a farmhand is living better than the operator of a below-average farm, and that will include about half the operators in a given area.

Typically, a farm worker in this area will get $200 a month the year around, plus a modern house, milk, some meat, feed for chickens, possibly vacation time, and a year-end bonus of $100 or more. It easily adds up to a $3,000-a-year job in town. He works probably 60 hours a week in summer, but much less in the winter.

Combination of small farms in Iowa has made many houses formerly occupied by tenants, and even owners, available for hired help, and this improvement in housing is all to the good. Farm employees in this community expect a modern house, and usually get it.

One reason I stay with a diversified livestock-crop program is to provide a year-round job for three married men and keep a crew together for the crop season. Winter chore work is not profitable to me, but I am in a sense paying overtime and housing them for the work they do in the summer.

If I were forced to pay overtime in the summer, I believe I would cut out livestock, specialize on crops, increase my machinery investment, decrease the size of crew, and lay them off in slack seasons as do employers in construction work. Even with unemployment compensation and overtime, I doubt that the workers would be any better off than under a straight year-round wage. Certainly there would be a greater turnover of labor, which would be wasteful to both employer and employee, and unsettling to the workers' families.

Agriculture offers good summer employment and work experience for high school and college students. Parents of city youngsters often ask me where they can place a boy in a good situation for the summer, and we have taken some on an apprentice basis. However, a high minimum wage would make it impractical to use this inexperienced help. Older men, not able to work to full capacity, would tend to be laid off, too, under a high minimum wage setup.

Minimum wages, in general, I think, tend to make the poorest quality, inexperienced labor relatively more expensive than the best and encourage, of course, mechanization at the expense of labor.

Present wage-and-hour legislation has had the effect of raising the cost of everything a farmer buys, even service at his local co-op elevator. At a time when farmers are being asked to tighten their belts and get along with less Government help, I think it would be most unfair to impose restrictive labor legislation upon them. Farmers can't pass these costs on with cost-plus contracts.

If the administration is really serious about balancing the budget and halting inflation, it would seem that a halt in wage increases and wage-and-hour coverage would certainly be in order.

Thanks again for your hospitality while in Washington. I always come home with more respect for our Congressmen and the part they play in making democracy function.

Sincerely,

HERBERT PIKE.

## A Lifetime of Farming

EXTENSION OF REMARKS
OF
### HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. MUMMA. Mr. Speaker, farming is living close to the soil. Ira M. Krall, Route 2, Myerstown, Pa., was written up in the Lebanon Daily News as a longtime farmer who is retiring and perhaps like the story of the retired mailman who still enjoys a long hike, Mr. and Mrs. Krall indicated their continued fondness for farming.

They sold their farm which has a history all the way back to William Penn but as the article states:

He and Mary have their noses in house plans, and they expect to build a little place in the country sometime, where they can hear the rustle of tall corn.

With his experience in farming it is interesting to note also his estimation of governmental intervention in the field he is leaving.

The newspaper article follows:

RURAL RAMBLINGS WITH LEON MILLER

Ira M. Krall has been farming so long he could plow a straight furrow on a foggy night with both eyes shut, if he had to.

But Ira had both eyes and ears open a couple of months ago when opportunity came knocking at the door of his place on Myerstown Route 2, and he sold all 138 acres.

After 30 years in the cow, sow, and plow business, Ira is retiring. He'll stay at the farm for another year, renting it from the new owner, Howard W. Patches.

And after that, move to town? "Not by a long shot," he said. He and Mary have their noses in house plans, and they expect to build a little place in the country sometime, where they can hear the rustle of tall corn.

"Farming was getting to be just too much," he said. "I've been mostly alone since Monroe went to Penn State; it's hard to get help, and I'm not getting any younger."

The decision to sell didn't come easy. He, Mrs. Krall, and son, Monroe, mulled it over a long time before making up their minds. Ira's mother was born there, and his father just across the way, so the roots are deep.

William Penn's name is on the deed, with those of the Krall ancestors, Christian and Mathias Krall. Ira's father acquired the place in 1912.

In spite of the ups and downs (every occupation has them) there are still many opportunities in farming, Ira believes. "And if I were 30 years younger I wouldn't have sold at any price."

Agriculture would be in better shape if the Government would allow it to work out its own problems, he believes. "As soon as Uncle Sam allows us to decide for ourselves what to plant, and how much, the better it will be for all concerned."

And then he made a point to show how large the hand of the taxers has grown:

"The Government takes more from Mrs. Krall's salary in a year than I earned in a month as a teacher back in 1923."

## Management's Mission on the International Scene

EXTENSION OF REMARKS

OF

## HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by T. S. Petersen, president of the Standard Oil Co. of California, before the Harvard Business School Club, of New York, on January 26, 1959, entitled "Management's Mission on the International Scene":

MANAGEMENT'S MISSION ON THE INTERNATIONAL SCENE

(Remarks by T. S. Petersen, president, Standard Oil Co. of California, before the Harvard Business School Club, New York, N.Y., January 26, 1959)

Good evening, and thank you for asking me here tonight to address you members of the Harvard Business School Club, of New York.

This club has provided a forum for some of the most provocative comment uttered on the workings of American industry and finance. I count it a privilege to take part in your discussions.

I also take special pleasure this evening in congratulating you alumni on the 50th anniversary just observed by Harvard Business School. Businessmen everywhere in the world salute your school for its research, for its practical and philosophical contributions, and above all for its trained and able graduates.

Looking back for a moment, we find that almost fantastic changes have taken place in American economic life in the crowded 50 years since Harvard Business School opened its doors.

Fifty years ago, the Pacific coast was 5 days away from you here; it is now 5 hours away. California—if you will bear with the commercial—is on its way to becoming the largest of the 49—perhaps soon to be 50—States.

We are all of us aware that in this past half century, American business has broken regional bounds. It is no longer wholly profitable or efficient to restrict major business to limited geographical regions of the country. Production and distribution systems have been enlarged to enable managements to enter and develop, serve, and expand a nationwide market.

This coast-to-coast view of the American market is taken for granted by most industries—and by most of our citizens; although, to be sure, some lawmakers, and now and then attorneys in the Antitrust Division, express their distaste for the concept.

Indeed, American business, in a mighty surge of development mainly confined to the last quarter of a century, has become global. During this time many of the leadership functions once performed by 19th century British commerce have been assumed, in much altered relationships, by us. And so American management now has an international mission. I shall try to define it.

THE INTERNATIONAL MISSION IS THREEFOLD

Reduced to its simplest terms, as I see it, this international mission is threefold: First, we retain the basic mission and responsibility of any manager—to run successful businesses; to make money. That may seem like stating the obvious, but I want to be explicit so that there will be no doubt concerning my views on the significance of profit-making to progress. We could not accomplish any of the other useful objectives of our mission without first operating successful businesses.

Second, I believe our mission includes the responsibility and obligations to develop the natural resources of less developed free countries, for the joint purpose of assisting their economics, and to make their resources available for the continued economic progress and security of the United States and the rest of the free world. I cannot stress this point too much for, as I shall discuss later, the United States is dependent on foreign sources for many of its strategic raw materials. We are not totally self-sufficient.

And third, we have the mission of strengthening the economies of the Free World countries, in order to advance the development and military security of all free nations, ourselves included.

This part of the mission, I feel, also includes something of a moral responsibility for assisting the Free World's less developed areas to elevate their standards of living. I have in mind the kind of services performed in the Middle East by American oil companies, which have helped the governments there to build roads, hospitals and schools, and establish training and education programs for the people.

As you can readily see, the three parts of this mission are closely interrelated. Our pursuit of these objectives amount to enlightened self-interest. The strengthening of the U.S. economy and defense, the developing of free foreign economies, the making of a profit, all contribute to the mutually desirable objective of peace and prosperity for all. I am perhaps inviting personal criticism in linking the words "profit," "peace" and "prosperity" so closely, in view of the distaste with which the concept of profit is held in some quarters. But nevertheless I'll take that risk; I firmly believe we cannot have one without the other.

The mission that I speak of is one that we have had thrust upon us, whether we like it or not. Even if we wished to, we could not avoid taking part in it. Our Government vitally depends upon the contributions of American management for the realization of its peaceful policies. Without the understanding of management, without the exports of investment capital which management risks, without teh economic trail blazing that management carries on, I believe our Federal Government would be seriously handicapped in attempting to stabilize and hold together the free world bloc of nations.

THE FIELD OF CONFLICT IS INTERNATIONAL BUSINESS

If anyone doubts this—if they would deny that American management has a key role to play in implementing the policies of our Government—let them listen to Nikita Khrushchev: "In the peaceful field of trade we will bury you," he told Western diplomats at a Kremlin reception. In other words, the field of conflict now between the Soviets and the democracies is international business; and management has been drafted to serve.

I welcome this challenge from Mr. Khrushchev: I am hopefully relieved that he has turned his attention to peaceful ways of making war on us. I also welcome this opportunity for a practical showdown between our two systems. The Kremlin proclaims to the world that a slave economy can outproduce a free economy. It promises that the Communist system can realize the hopes and aspirations of the people of less-developed countries in a shorter time than the system of private enterprise can.

Make no mistake, we have to do something more than merely toss our helmet on the field to win this contest. It is easy for us to believe and to tell ourselves that free men in the long run outproduce a slave economy. But we must demonstrate that fact to the one and a half billion people on this earth who still remain skeptical.

In getting on about this business of outdoing the Communists in the international economic arena, we unfortunately find ourselves starting out with a serious handicap. Maybe we don't have one hand tied behind us, exactly, but at least its use is restricted. I refer to the misunderstanding that exists concerning our mission abroad.

It seems decidedly obvious to me that the successful overseas ventures of American businessmen should be praised for their contribution to the economy and security of all the free world. Yet this is certainly not always the case—nor even most of the time.

Instead, what you hear are suspicious mutterings about the supposedly exorbitant profits these ventures bring, about how they threaten the livelihood of American workers, about how they enable corporations to evade just taxation. The average American is fed a great deal of antibusiness propaganda, none of it more distorted, I think, than this false propaganda about foreign profits.

I know something about this from painful experience. The business in which I am engaged, the American oil industry, has far more invested abroad—nearly $10 billion—than any other industry.[1] That's out of a total investment of $25 billion.

Footnotes at end of speech.

Our job is to discover, produce, and market oil for the use of the free world. I could dwell at length for example, upon how the Middle East has advanced to a new scale of economic and social life through the benefits accruing from development of its oil resources. This is not the place for that story, but the record will bear the most critical inspection. It is a splendid record, yet it has been maliciously distorted in some quarters.

The disturbing conviction settles upon the mind of anyone examining the record of American private investment abroad that many people, both in and out of Congress, are somehow blind to the great risks involved; the need for incentives to justify them; and the modest character, on the average, of the profits of overseas investments.

ANTIBUSINESS BIAS IS A HANDICAP TO THE FREE WORLD

These prejudices and distorted conceptions, often fostered by people with an antibusiness grudge or bias, are handicapping the United States and the free world in their competition with the Communist sphere.

We of business, it seems, must shoulder at least a significant share of the blame for this situation. We apparently haven't done enough to tell the citizens of this country what our foreign ventures have meant to the less-developed countries of the free world and to this country itself.

Before we can even begin to accomplish our mission then, it's apparent that we'll have to start explaining ourselves and what we're trying to do. Only through development of public understanding in this manner can we expect to get the kind of understanding in and out of government that we must have to do the job.

Backing off from the generalities, just how do we go about this? It is basically a communications problem and I believe business and industry must begin right now to carry this message to the public through the various media available. You and I, for our part, can contribute by telling this story to our friends, our business associates, anyone who will listen. Public opinion is, after all, only the sum total of what you and I think individually. If we, personally, convince enough individuals, and they in turn convince others, we can alter these distorted concepts now held about this management mission on the international scene.

That then is one of the broad approaches to accomplishment of our mission—the development of public awareness and support for our objectives. More understanding, however, will not accomplish the mission itself. And so I turn now to how I believe this important task should be approached.

There are, I think, two routes to follow. Neither is at all revolutionary; they are quite fundamental. First, I believe we must stimulate foreign investment by U.S. investors, to a considerably greater degree than now exists. Second, I firmly believe we must continue to reduce all the various barriers now restricting international trade.

FOREIGN INVESTMENT UNDERPINS OUR TOTAL EFFORT

Foreign investment, to consider that in detail first, emerges clearly as the underpinning of our total effort. A little over a year ago in San Francisco we had the rewarding experience of playing host to some 600 of the world's businessmen from 56 free countries. This was the International Industrial Development Conference, sponsored by Time-Life, Inc., and the Stanford Research Institute. No one who was present at that extraordinary meeting could fail to acquire a new appreciation of how great is the responsibility of American management on the international scene.

No banker in history, I suppose, has invented more public money in the less-developed parts of the world than Eugene Black, the president of the World Bank. Yet he reminded us at San Francisco that public investment sources, national and international, would not likely provide the steady growth of foreign investment that is needed.

There was general agreement in the conference roundtable discussion on this point: That the economic and political strength of the free world requires a strong partnership between private enterprise, Government and free labor—supported by science, technology, productivity, and the spirit of free people.

In discussions about the economic race with communism, you will frequently hear it said that the Government, both Congress and the executive branch, would like to be able to put primary reliance on private enterprise to win the race.

"The whole free world needs capital, and America is its largest source," said President Eisenhower in a message to Congress on foreign economic policy. "In that light, the flow of capital abroad from our country must be stimulated and in such a manner that it results in investment largely by individuals or private enterprises rather than by Government."

One of the President's specific proposals stemming from his conviction that the flow of capital abroad "must be stimulated" has been for legislation that would provide for a 14-point tax allowance. This means reducing United States taxes on corporation income from foreign sources to 38 percent, where on domestic income the rate is of course 52 percent.

OTHER PROPOSALS TO STIMULATE FOREIGN INVESTMENT

To that proposal I would add these others, which have been endorsed by our company:

1. All United States companies operating abroad, whether directly or through foreign-based subsidiaries, should be permitted to defer payment of United States taxes on foreign income until the earnings enter this country. As things now stand, a United States company operating directly in a foreign country must pay taxes on its income currently, while income earned through a foreign subsidiary is not taxable by the United States until the subsidiary pays a dividend to its parent.

This gives the foreign subsidiary a decided advantage, in that it may choose to reinvest all or part of its earnings tax free, rather than paying a dividend, while the United States company must pay taxes at home whether or not it reinvests.

I do not believe an American investor should have to resort to a foreign subsidiary to be competitive with foreign capital. If we continued to give domestic companies abroad the protection of our tax laws,[2] but at the same time permitted them to defer taxes on foreign income, it would serve as a powerful incentive to foreign investment. We would be putting our domestic companies on a far more competitive footing with their foreign competitors in a foreign jurisdiction.

2. The United States should allow a credit for taxes waived by a foreign country, where the purpose of the waiver is to stimulate business in the foreign country. Under our present tax structure the waiver in effect is absorbed by the United States and the incentive is eliminated.

3. Another area where remedial legislation is needed is in the section of the Internal Revenue Code (367) governing reorganization of foreign corporations. These corporations are presently severely limited in the moves they can make to reorganize or consolidate foreign holdings, because of the heavy taxes on liquidations or transfers of ownership that apply.

By contrast, wholly domestic companies are free to make such moves without incurring a tax liability. I feel therefore that if these same tax benefits were extended to foreign corporations, it would provide an important stimulus to further investment abroad.

It is gratifying to note that these proposals, as well as the 14-point reduction recommended by the President, have been incorporated in a bill submitted to the present Congress by Representative HALE BOGGS of Louisiana. This is H.R. 5, the proposed Foreign Investment Incentive Tax Act; I believe it is most deserving of our support.

IMPORTANT TO KEEP INCENTIVES ALREADY ON THE BOOKS

I might stress, also, that it is vital to keep on the books those already existing tax provisions which are now helping importantly to stimulate foreign investment. These include the credit for taxes paid to a foreign country, percentage depletion for extractive industries, and the so-called Western Hemisphere trade corporation provision of the tax law. This is the provision which grants a 14-point tax reduction to U.S. corporations engaged in trade or business outside of the United States in the Western Hemisphere. It has served effectively to promote trade between the United States and other countries of this hemisphere; in fact, extending its provisions worldwide would have an extremely salutary effect on investment.

Foreign countries, of course, must likewise contribute to the encouragement of U.S. investment abroad. The waiver of taxes is one way to do this; in general they should adjust their tax rates to compensate for the risks that may be run by the foreign investor.

It is essential that they provide means for the repatriation of capital and profits without undue penalties in the form of currency restrictions; and they should provide safeguards assuring that control of the management will remain in the hands of the investors.

An obvious incentive to investment, too, is a demonstrably high standard of business ethics. Those countries which scrupulously adhere to their agreements with foreign investors, whether written out or tacitly understood, are most likely to attract the capital they need. Conversely, an investor, once burned by a country which fails to live up to its part of a bargain, will probably seek other climes.

Now, as I remarked earlier, there are two clearly marked routes to the accomplishment of management's international mission. One of these is through further stimulation of foreign investment, as I've attempted to point out, and the other is through freer trade, a subject which I would like to focus on now.

ENCOURAGEMENT OF FREE TRADE IS ESSENTIAL

The stimulation of freer trade fits very precisely and logically into the total fabric of our mission. There is nothing mysterious or particularly technical about it. Obviously our allies need access to our markets in order to encourage their economic growth and enhance their standards of living—and in the process strengthen the economic sinews of the free world as a whole. Perhaps less obviously, we need—and, it appears, are going to need more and more—their markets as an outlet for our own economic energies.

Here again we are confronted by often discouraging obstacles—obstacles which are as old as international trade itself. Just how do we go about establishing this mutual accessibility to each other's markets.

The answer involves thorny issues that have been, and will be, debated in the U.S. Congress, British Parliament, and in other legislative bodies for generations to come. But it is heartening to witness that a start

---

Footnotes at end of speech.

has been made. Our own Reciprocal Trade Agreements Act, which has provided a sort of "road back" from the depths of McKinley protectionism, is part of that start. While some of us, perhaps, might have wished for something more, the renewal of this act in the last Congress provided more than a little encouragement.

More recently, we Americans have been watching with varying degrees of anticipation and approval the steps being taken by the Western European countries toward freer trade. One cannot help but experience a feeling of gratification and new hope as a result of the currency exchange decisions taken by 10 Western European nations.[3]

Here were the leading trading nations of Western Europe asserting their confidence in their economic future by allowing external convertibility of their currency, or in other words permitting nonresident foreigns to convert into dollars and other money the currency which is earned in those countries.

This liberalizing of European currency exchanges should be helpful in enlarging purchases from the United States by European businessmen.

Best of all, these economic developments in Western Europe should have an instructive effect in this country. They should help to deflate the arguments of those who have been reluctant to see the United States lead the way toward freer world trade.

EUROPEAN COMMON MARKET—AN ACT OF ECONOMIC STATESMANSHIP

The adoption of the European Common Market on January 1 was a rational and farsighted act of economic and political statesmanship.

The six[4] countries of the Common Market have a population almost equal to that of the United States, a gross national product of about $180 billion, and a potential capacity to absorb imports that may be even greater than the huge import capacity of the United States.

Those Europeans who have long been accustomed to walling themselves up behind barriers, in order to secure the imagined benefits of protection of national industries, are coming to the realization that these walls are the very obstacles that have stood in the way of economic advance.

It is possible that this realization will result in the working out of a free trade area among the nations surrounding the Common Market countries, so that we shall ultimately see a 17-nation[5] bloc concerting their trading arrangements.

The obstacles remaining to be overcome before this 17-nation economic union can be achieved are formidable ones. But it is encouraging that the nations involved have been making a very determined effort toward that end.

We were told at the International Industrial Development Conference at San Francisco that the 17 countries of Western Europe do set up such a free trade area, it will become possible for American business to establish a plant anywhere in the 17 countries and enjoy free trade over the whole market area, including parts of Africa.

And these markets are attractive ones. Consumer demand has been growing rapidly in Western Europe since that region's recovery from war dislocation was completed along about 1950. It is a familiar fact to you, I'm sure, that labor productivity has risen there at a higher annual rate than in the United States. Europeans have money to spend for cars, TV sets, radios, and refrigerators.

LIBERALIZATION OF TRADE BARRIERS MUST BE MUTUAL

All of this offers comforting prospects to American business, but it also poses something of a challenge. This liberalization of trade restrictions, it goes without saying, must inevitably be a mutual thing. If we expect to take advantage of Europe's increasingly enlightened outlook, we must prescribe for ourselves some proportion of the same remedy of tariff cuts.

Two basic facts of economic life dictate such a course. First, there is a new factor in the picture that works against the traditional American tendency toward overprotectionism. It is this: The United States, really for the first time in almost half a century since the start of World War I, is about to experience competition and rivalry from a single market area of comparable size to ours, and with a potential approaching ours. We shall find that to hold and develop foreign trade in the face of this European potential will require what Mr. Dulles has referred to in another context as "an agonizing reappraisal."

Remember, as I said at the outset, that our mission abroad includes the development of outlets for our own excess economic energies. We cannot open an advantageous access to Europe's markets for this purpose, unless, to some equitable degree, we reciprocate.

The second of the economic facts-of-life that obtain here has to do with one of the great delusions that has a baffling degree of acceptance in some quarters. This is the delusion of national self-sufficiency. The deadweight of tradition is difficult to throw off, but the fact is that in raw materials we have largely changed from a "have" to a "have-not" nation.

A half century has seen that transition. Where formerly we had relative self-sufficiency in raw materials, we have come to the point that ours is now the greatest importing Nation in the world. Our position has swung 180 degrees around the compass.

Consider some of these imports figures, from the latest international trade statistics compiled by the United Nations:

In 1957 our country's imports totaled about $13 billion, well ahead of the next largest importer, the United Kingdom. We imported $2.7 billion in raw materials, exclusive of fuels, second only to the United Kingdom.

We ranked first again in imports of fuels, lubricants, and related materials, with close to $1.6 billion; first in chemicals, with $390 million. We were well ahead in the nonferrous metals such as aluminum, lead, zinc, and tin—all highly strategic; and, exclusive of machinery and transport equipment, we are also first in imports of manufactured goods.

It has been estimated by Percy Bidwell, the noted economist, that between 35 and 40 percent of the free world's output of raw materials is consumed by U.S. manufacturing industries.

We must, in short, allow and encourage an increasing volume of imports, not merely as a lever to pry open foreign markets for our own products, but because we are deficient in many of the basic raw materials that are vital to our domestic economy.

NOT ALL PROTECTIONISM IS BLIND

Few people, certainly, would propose on the basis of these dual objectives that we totally lower all tariff barriers. A very real need continues to protect within reason certain of our essential industries against the possibility that we be cut off from foreign sources of the same product. Not all protectionism is blind or undesirable per se. We must safeguard such strategic industries as optics, precision instruments and others which, experiecne has demonstrated, often cannot withstand the rigors of competition from abroad.

But at the same time we must, in all realism, make provision for the importation of some commodities and finished products which are competitive with our own domestic output. The degree to which we can safely expose ourselves to this necessary competition from abroad is, obviously, not simple to determine. But we do have the means for such determination, in the machinery of the Reciprocal Trade Act.

As I have pointed out, this is not only desirable but essential in the case of raw materials. By 1975, according to the Paley Commission on raw materials resources, the United States is going to require double the output of goods and services that it had in 1950. The raw materials required for a doubled output of goods and services must largely come from abroad.

In passing, I might mention that oil provides a very immediate and practical example of the problem with which we're confronted. We need oil from abroad to supplement our domestic supplies; also, in our own self-interest it is essential that we maintain friendly relations with oil-producing countries in the Middle East, Far East, South America, and elsewhere, and this means buying some of their oil. At the same time, it is in our own self-interest to maintain a healthy domestic oil industry.

How to compromise this dilemma is a troublesome question. But compromise it we must, for a decision tending toward either extreme of the question can only be destructive of our Nation's best interests.

Such are some of the opportunities and some of the problems confronting management as it seeks to achieve its international mission.

THE CHALLENGE HAS BEEN ISSUED

If I may restate that mission for you, it is to develop foreign resources to the mutual benefit of the United States and the free world; to develop an understanding in the United States of these benefits; and to build an awareness in the United States of the necessity for give-and-take between our Nation and free foreign countries in order to promote mutual security.

Our Communist competitors have issued the challenge. The conflict for the time being—and we hope permanently—is to be in the peaceful realm of trade and commerce. But it is conflict nonetheless. We of the business community are, perforce, deeply involved. Foreign investment and international trade, as I see it, are the most effective weapons in this contest. No one is better equipped to deploy and use these weapons than American business management.

That then is our mission; and it is a vital and historic one.

We are told that we are not far from the day when the United States will put men into space. Upon the achievement of flight by man in space, we shall be tempted to consider that the greatest event in our lifetimes.

And yet I wonder if the supreme drama of the 20th century will truly be the orbiting of a space traveler? Is not the great event of our lifetimes already taking place? Isn't it the tremendous economic revolution going forward in every continent and in the less developed countries?

A whole generation of men and women is orbiting into a better life. Their ancient fate was to remain hopeless, doomed to hunger, privation, disease and early death. By the means entrusted to advanced industrial management, these men and women have been encouraged to turn their backs on that fate.

The spread of private American enterprise into the far parts of the world has helped to alter the terms of life for, literally, billions of people. To participate in the emergence and development of whole human societies of this sort is a wonderful and exciting privilege. The enlargement and expan-

Footnotes at end of speech.

sion of these world developments and potentialities is, I believe, the highest mission of America's economic freedom and strength.

## Jefferson on Public Debate

EXTENSION OF REMARKS
OF
### HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. ROBISON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from my hometown newspaper, the Owego (N.Y.) Gazette of February 25, 1959.

JEFFERSON ON PUBLIC DEBATE

Last week we published some words of guidance uttered by George Washington regarding public debt, Government living beyond its income and related subjects, which we believe to be especially timely in view of the present rate of tax boosts and rising Government expenditures.

The week before we published some of the thoughts of Abraham Lincoln on these same subjects, including the usurping of obligations of private citizens by Government through the medium of Federal assistance.

Today, we would like to present what our third President, Thomas Jefferson, founder of the Democratic Party, had to say on the same subjects.

Let Jefferson speak to our hearts and minds and let us be wise and take heed. Here is what he said:

"I place economy among the most important virtues and public debts as the greatest dangers to be feared. To preserve our independence, we must not let our leaders load us with perpetual debt.

"The same prudence which in private life would forbid our paying money, forbids it in the disposition of public money. We must endeavor to reduce the Government to the practice of rigid economy to avoid burdening the people and arming the magistrate with a patronage of money which might be used to corrupt the principle of government.

"The multiplication of public offices, increase of expenses beyond income, growth of the public debt, all are indications soliciting the employment of the pruning knife.

"It is incumbent on every generation to pay its own debt as it goes."

About everyone will agree most heartily with Jefferson's philosophy, but no one ever does anything about it. And so we continue our merry but crazy policy of tax and spend, spend and tax. Only now, it's reached the point where we're spending even more than we tax.

## USDA Announces Development Program for National Forests

EXTENSION OF REMARKS
OF
### HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. GAVIN. Mr. Speaker, steps to provide more timber, water, recreation, wildlife, and other renewable resources from the Nation's increasingly valuable national forest system were proposed today by Secretary of Agriculture Ezra Taft Benson.

With special letters to the President of the Senate and the Speaker of the House, Secretary Benson submitted a program to advance management and increase facilities of the national forests during the coming years to meet needs of a growing population and expanding economy.

The statement follows:

PROGRAM FOR THE NATIONAL FORESTS: COMMUNICATION FROM THE SECRETARY OF AGRICULTURE, TRANSMITTING A REPORT RELATIVE TO A PROGRAM FOR THE NATIONAL FORESTS

DEPARTMENT OF AGRICULTURE,
*Washington, D.C., March 23, 1959.*

THE PRESIDENT OF THE SENATE,
*U.S. Senate.*

DEAR MR. PRESIDENT: A report entitled "Program for the National Forests" is transmitted herewith for information of the Congress and appropriate reference.

President Eisenhower in his state of the Union message in February 1953 called attention to the vast importance to this Nation, now and in the future, of our soil and water, our forests and minerals, and our wildlife resources. He indicated the need for a strong Federal program in the field of resource development.

On July 31, 1953, the President supplemented that message by sending to the Congress a special message relative to a program designed to conserve and improve the Nation's natural resources.

In referring to the national forests administered by this Department and to other public lands, the President stated in that special message that the Federal Government has a responsibility to manage wisely those public lands and forests under its jurisdiction necessary in the interest of the public as a whole. Important values exist in these lands for forest and mineral products, grazing, fish, and wildlife, and for recreation. Moreover, it is imperative to the welfare of thousands of communities and millions of acres of irrigated land that such lands be managed to protect the water supply and water quality which comes from them. In their utilization of these lands, the people are entitled to expect that their timber, minerals, streams, and water supply, wildlife and recreational values should be safeguarded, improved, and made available not only for this but for future generations. At the same time public lands should be made available for their best use under conditions that promote stability for communities and individuals and encourage full development of the resources involved.

Accordingly, provisions for a marked increase in management activities on the national forests have been made in recent years. These Federal properties have been substantially improved. The flow of values stemming from them has markedly increased. Our management experience clearly dictated the need for still more intensive development and management.

As a result, in 1956 I asked the Forest Service to develop a long-range conservation program for national-forest resources. The first result of this request was a 5-year program, Operation Outdoors; the second is the enclosed "Program for the National Forests."

This conservation program embraces all the renewable resources of the national-forest system—water, timber, recreation, forage, and wildlife habitat. It includes both long-range objectives and interim proposals. The program provides for the continued, orderly use and development of the renewable resources of these Federal lands in accordance with the basic conservation principles of sustained yield and multiple use. What is done in the next 10 to 15 years will largely determine whether these vastly important public lands will contribute by the year 2000 their fair share to a greatly expanded national economy.

The national forests are widely scattered throughout the United States, occurring in all but 10 States and in Puerto Rico. They are of direct benefit to millions of people. From them are derived an impressive portion of the Nation's supply of meat, fiber, shelter, water for irrigation, industrial, and domestic purposes, hydroelectric power, feed for livestock and wildlife, and outdoor recreation.

These national forests belong to all American citizens. Their resources and services are available for use by everyone. In recent years the use of these lands has been increasing steadily. Demands are now such that a comprehensive program for the orderly growth of development and management activities is of demonstrated urgency. Our rapidly growing population and expanding economy indicate mounting and competitive pressures for national forest resources.

Legislative authorities for the recommended program are generally adequate. Supplemental legislation will be proposed as the need arises. Appropriation requests to implement the program will be submitted to the Congress in future years in connection with budget presentations after due consideration of the overall fiscal needs and resources of the Federal Government.

A similar letter is being sent to the Speaker of the House of Representatives.

Sincerely yours,

EZRA TAFT BENSON,
*Secretary.*

PROGRAM FOR THE NATIONAL FORESTS [1]

There are presented herein long-range objectives and a short-term conservation program for the national forests and associated lands. The long-range objectives are related to the year 2000 and the short-term program to what needs to be done in the next 10 to 15 years toward meeting current needs and attaining long-range objecives.

This program has been developed after much study. The Department of Agriculture has recently completed an exhaustive study of the U.S. timber situation entitled "Timber Resources for America's Future." Operation Outdoors is a 5-year recreation program for the national forests. Research needs are based in part on the findings of a departmental committee on research evaluation. The Forest Service has long maintained a project work inventory for the national for-

[1] Prepared by the Forest Service, U.S. Department of Agriculture.

ests. These and other studies are the background for the objectives and program herein developed.

The statutory authorities under which the national forests and associated lands are administered, and under which research is conducted, are generally adequate to permit carrying out the program subsequently outlined. Additional legislation which would be helpful in carrying out the program will be recommended as needed, particularly legislation to facilitate development of an adequate road system.

*The national forest system*

The national forests of the United States are invaluable national assets. These Federal properties, consisting of forest and rangelands and high mountain watersheds, occur in 39 States and Puerto Rico. There are 181 million acres of national forest land grouped into 148 national forests. Eighty-seven percent of national forest lands occurs in the West.

Of the land area of the continental United States, 1 acre out of every 12 is in national forest. In the West it is about 1 acre out of every 5. Every citizen owns a share of the national-forest system. It might be said that every man, woman, and child in the United States owns 1 acre of national-forest land.

The national forests consist largely of land reserved from the public domain by Presidential proclamation under the act of March 3, 1891. These lands have always been in Federal ownership. President Theodore Roosevelt proclaimed 148 million acres of public domain as forest reserves—far more than any other President. In 1905, the forest reserves were placed under the administration of the Secretary of Agriculture and the Forest Service was created to administer them. Later their name was changed to national forests to reflect a conservation policy of resource utilization rather than of preservation.

Most of the national-forest land in the East was purchased under the Weeks law of 1911, as amended in 1924, which authorized purchase of lands to protect the watersheds of navigable streams and for timber production.

Pursuant to the act of June 4, 1897, the 1911 act, and others, the national forests have been administered under the dual policies of sustained yield and multiple use of resources. Research has been conducted mainly under the act of May 22, 1928, as amended.

The national forests yield water, timber, forage, recreation, game and other wildlife, and minerals. Western agriculture and industry are dependent on water flowing from national-forest watersheds; hundreds of thousands of people earn their livelihood processing timber grown on national forests; millions of domestic livestock graze national-forest ranges; and many millions of people seek the national forests for rest, relaxation, and spiritual uplift. All of the renewable resources are to be utilized at a high sustained level of productivity and in harmonious relationship each with the other. This is the basic policy.

Most national-forest resources and services, such as recreation, wildlife habitat, waterflow, and scenery cannot be evaluated in monetary terms. There is no known way to measure the multiple intangible values and services of the national forests; but the timber, forage, and land alone are appraised at well over $7 billion.

The national forests are revenue-producing properties. Twenty-five percent of such revenues is distributed to counties in which national-forest lands are located in lieu of direct taxes. Current annual revenues are about $100 million and more than $1 billion has been received in total from the sale of national-forest goods and services. National-forest payments received by the counties, coupled with Federal expenditures for roads and fire control which States or counties would otherwise make, substantially exceed the taxes that the national forests would pay if subjected to ordinary assessment and levy.

In addition to the national forests, the Forest Service administers some 65 land-utilization projects totaling over 4.5 million acres in 27 States. These are largely forest and rangelands, submarginal for private ownership and acquired by the Federal Government during the 1930's for purposes of conservation and rehabilitation. The lands are administered under title III of the Bankhead-Jones Farm Tenant Act of July 22, 1937, and with the same general sustained-yield and multiple-use objectives as the national forests.[2]

*National forests in a changing world*

Rapid change in the United States is everywhere evident. Highway construction, housing developments, and expanding urban areas are prevalent throughout the land. The two foremost economic indicators of these and other changes are population and gross national product.

In the 13 years since the end of World War II population in the United States has increased 32 percent. An estimate of 332 million persons by the end of the century is more than double the 1950 census. In the same half century, gross national product is expected to increase more than five times. Furthermore, in the West, where most national forests are located, population growth is even more phenomenal. The estimate for the 11 Western States is for a tripling of population in the last half of the 20th century.

Another indicator of special significance from the standpoint of recreational impact on the national forests is the increase in leisure time. The average individual today has about 50 percent more leisure time than in 1920. By the turn of the century an individual may have a third more leisure time than he has today.

The impact of this national growth upon the national forests already has been tremendous as evidenced by recent trends in use. The impact will be even greater in the future. No longer are the national forests the inaccessible and distant hinterlands they were when the system was first established. No longer can the Forest Service be primarily a custodian whose principal function is protection of national forests from fire. Barriers of time, distance, and inaccessibility have been fast fading, especially in the last two decades. The people have found the national forests; and their vast resources are in great demand. Management must become progressively more intense and more adequately supported by research findings if the national forests are to keep pace with economic needs and national growth.

The role of the national forests in the national economy, and especially in that of the Western States, cannot be discounted. Nearly half of all softwood sawtimber in the Nation and more than half the commercial forest land in the West is found in the national forests. About one-fourth of the timber cut in the West comes from the national forests.

Nearly one-fifth of the 11 Western States is national forest land and these lands, because of their mountainous character and generally high elevation, receive one-third of the precipitation and furnish over half the streamflow. Western national forests are major sources of water for 1,800 towns and cities including such major metropolitan areas as Salt Lake City, Seattle, Portland, San Francisco, Los Angeles, and Phoenix. Over 600 hydroelectrical developments depend on the national forests for water.

Irrigation accounts for one-half of the Nation's consumption of fresh water. By 1975 daily use of water is expected to nearly double, an increase which would be equivalent to the daily flow of over 13 Colorado rivers. Inevitably, western national forests will continue their indispensable role as regulators of the kind and amount of fresh water available to western people.

Similarly in recreation the national forests are of increasing importance because of more leisure time, greater mobility of the average family, increased accessibility of the national forests, and the relatively low cost of a national forest vacation.

In the West, despite downward adjustments in the numbers of permitted livestock, over one-fifth of the sheep and one-eighth of the cattle graze national forest ranges. Over one-third of all big game in the Nation is found on the national forests along with 81,000 miles of fishing streams and over 2 million acres of natural lakes and impounded waters.

*National forest progress since 1953*

In his first state of the Union message on February 2, 1953, the President called attention to the vast importance to this Nation now and in the future of the soil and water, the forests and minerals, and the wildlife resources. It was recognized that the Federal responsibility in the field of resource development called for a strong program.

Since that time, substantial and gratifying progress has been made, both financially and physically, in the development and management of the national forests and associated lands.[3] Some of the outstanding achievements that have been accomplished since 1953 should be mentioned.

In timber resource management, the funds available for sales administration and management have risen from $5.9 million in fiscal year 1953 to $13.5 million in fiscal year 1959, and those for reforestation and stand improvement have risen from $1.2 million to $3 million. In 1953, 5.2 billion board-feet of timber with a stumpage value of $70.6 million were cut. After reaching a previous peak in 1957, 8 billion board-feet with a stumpage value of more than $100 million are expected to be cut in 1959. At the same time, the number of timber sales rose from 24,300 to an estimated 36,000 in 1959. In 1953, the area planted or seeded to trees was 51,200 acres. Almost double that amount is now being planted annually. Timber stand improvement work was done on 387,300 acres in 1953. Today this work is being carried out on approximately 800,000 acres annually.

In 1953, the sum of $2.4 million was available for range resource management: $1 million being for range management, $763,000 for range revegetation, and $658,000 for range improvements. In fiscal year 1959, the sum of $4.8 million is available, $1.7 million being for range management, $1.5 million for range revegetation, and $1.6 million for range improvements. During this period, reanalyses and revised range management plans were completed on 2,150 or nearly one-fourth of the 8,790 range allotments. The rate of range reseeding has practically doubled the 53,600 acres reseeded in 1953. During the period 1953 through 1958 nearly a half-million acres have been reseeded. During the period 1953 to 1958 inclusive, about 1,600 range water developments have been constructed. Annual rate of construction is double what it was in 1953.

[2] The statistics used in this report relate only to the national forests unless otherwise specified; but the objectives and program presented apply to both the national forests and associated land-utilization projects.

[3] Hereinafter referred to as the national-forest system.

The Federal financing of the construction, rehabilitation, and maintenance of recreational developments has increased from $3.1 million in fiscal year 1953 to almost $10 million for fiscal year 1959 and the amounts for wildlife habitat management increased from $223,000 to $805,000. During this same period, the recreation visits rose from 35.4 million in 1953 to 68.5 million in 1958, one-fourth of these being visits from hunters and fishermen. The number of developed campground and picnic sites in 1953 was approximately 4,600, containing 41,100 family units. Most of these were constructed in the mid 1930's and were badly in need of rehabilitation. Although the work of rehabilitating these areas had begun a few years earlier, the program for the recreational development of the national forests called "Operation Outdoors," was prepared and initiated in 1957. As a result, good headway has already been made in the rehabilitation of the developed campground and picnic sites and some new sites have been developed. There are now 5,100 developed campground and picnic sites containing 46,700 family units.

For soil and water management the sum of $137,000 was available in 1953. This has been increased to $1.4 million in fiscal year 1959. The number of national forest watershed rehabilitation projects increased from 12 in 1953 to 145 in 1958. This work is done specifically to improve and protect watersheds, lessen flood damage, or restore damaged and eroding lands, over and above that normally being done in connection with other national-forest activities.

In fiscal year 1953, there were $22 million of Federal funds available for the construction and maintenance of forest development roads and trails. The amount for fiscal year 1959 for this purpose is $35.4 million. In 1953, there were constructed with Federal funds 728 miles of forest development roads. In the 1953 through 1958 period, 5,289 miles have been constructed and it is estimated that 1,062 miles will be constructed in fiscal year 1959. In addition, purchasers of national-forest timber during the period 1953 through 1958, constructed 12,570 miles of forest development roads, with allowances therefor in timber appraisals.

One of the most troublesome problems was the need for housing, particularly to provide suitable housing for field personnel. In 1953, the amount available for structural improvements for fire and general purposes was $3.1 million, practically all of which was for maintenance. This has more than trebled and for fiscal year 1959, the amount is $10.6 million. Since 1953, there have been constructed 602 dwellings and related improvements, 769 service buildings, and 139 lookout structures.

In 1953, the total receipts from the sale of timber and from the use of the range and other surface resources was $76 million. It is anticipated that these receipts for fiscal year 1959 will be about $110 million. With these anticipated receipts for 1959, almost $600 million will have been received by the Federal Government since the close of 1953. This is almost 60 percent of the first billion dollars of national-forest receipts reached on November 21, 1958, after the national forests were placed under the administration of the Secretary of Agriculture in 1905. Twenty-five percent of these revenues were distributed for the benefit of schools and roads in the counties.

Federal financing of research bearing on national-forest problems in 1953 was $6.2 million. In 1959, it was $16.5 million, including $2.5 million for construction of research facilities. Any precise allocation of the benefits of forestry research to the support of management and development of the national-forest system is difficult. Generally, research projects benefit anyone who protects and manages forest resources regardless of landownership. Thus it serves private as well as public forestry. During this period, forestry research has made substantial and significant contributions to the development, management, and protection of the national-forest system. These include, to name only three, (a) development of a new aerial forest fire control method, with the result that in 1958 more than 1.4 million gallons of chemical fire retardant were dropped on 320 fires in the national forests with a high degree of success; (b) a new technique for fumigating tree nursery soils was perfected in 1957, increasing the efficiency and effectiveness of seedling production; and (c) a patch-type of cutting for lodgepole pine timber was developed for high, mountainous national-forest areas of the Rocky Mountains which increases late spring water yield by 25 to 30 percent because of its influence on snow accumulation and rate of melt.

There have been many other major conservation accomplishments in the management of the national-forest system. New or revised policies have been adopted since 1953 in order that the management of the national forests would be more responsive to the needs of the users. As a result of cooperative effort with both the forest and mining industries, authority was enacted in 1955 and procedures developed to provide for the multiple use of the mineral and surface resources. In 1958, "Timber Resources for America's Future," the most comprehensive study of the timber resources of the Nation, was published and as a result the timber goals for the national forests have been raised substantially. Changes have been made in national-forest grazing policies to give permittees increased stability in the utilization of the grazing resources. The number of public advisory committees at State, regional, and local levels, advisory to the Forest Service on activities covered by this program, has been increased to 170.

The national forests are clearly national in significance because of their impact on our people in both their work and their play. Wood and livestock products from the national forests enter into the commerce of every State; waters flowing from the national forests cross State boundaries; and the millions who hunt, fish, camp, picnic, and ski on the national forests come from every State and every walk of life.

The national forests are federally owned and their multiple-use management to produce a sustained yield of services and products is a Federal responsibility. Despite the splendid progress that has been made since 1953, these properties with their current assets and enormous potential must be responsive to national needs. In addition, there are opportunities for development primarily of localized significance in collaboration with non-Federal groups, both public and private.

Past trends, present use, and future expectations indicate clearly the need for a planned program of development and use supported by essential research. Resource development is a long-time proposition. What is done in the next 10 to 15 years will largely determine the heritage that our children and their children will receive from the national-forest system.

*A national-forest conservation program*

The program presented herein is geared to meeting the needs of this short-term period and to preparing the national-forest system to contribute its fair share to the national well-being at the end of the century.

The program is described in terms of both long-range resource objectives to be accomplished by the year 2000, and the specific work which will need to be done in the short-term period to attain these objectives. The program will be carried out as rapidly as possible within the overall budgetary requirements and financial resources of the Federal Government.

Resource Development and Management

The basic renewable natural resources of the national-forest system upon which the Nation will rely to an increasing extent in the years to come are the timber, water, range, and the recreation and wildlife habitat resources. Their intensive development and management is truly a conservation program of great significance to the continued development, prosperity, and welfare of the Nation.

Timber Resources

The long-range timber goal for the national-forest system is an annual harvest on a sustained-yield basis of 21.1 billion board feet of sawtimber by the year 2000. This goal is about 3 times the 1957 timber cut. Total sawtimber growth estimated to be needed in the year 2000 to meet national demands is 105.4 billion board feet. The national-forest goal is that portion of the national need which the national forests could reasonably be expected to produce under intensified management.

The objective is to reach this goal by: (a) Intensifying the management of existing stands, including measures to assure stand improvement and regeneration; (b) growing more and better trees on the lands that are not producing their full capacity today; (c) reducing losses from disease, insects, and fire; and (d) improving utilization. The short-term program steps to further items (c) and (d) are covered later under the headings "Protection and Research."

The program proposals for the short-term period are:

1. Harvesting will be increased toward the goal of full sustained-yield cut on all working circles so that annual cut will reach 11 billion board feet.

2. Harvesting will be developed in a manner that will, to the extent possible: (a) Accelerate cutting of stagnant stands, release advance reproduction by removing overstory of old growth, and increase the salvage of dead, dying, and diseased trees; and (b) encourage reasonable distribution of sales among small, medium, and larger operators.

3. Develop and apply on sale areas higher standards of regeneration, hazard reduction, salvage, and erosion control.

4. Up-to-date inventories will be obtained for all commercial forest lands and timber management plans will be completed for all working circles. When completed, they will be maintained by periodic reinventories and revisions.

5. Approximately three-fourths of the 4.4 million acres of nonstocked and poorly stocked plantable lands will be seeded or planted.

6. The productive condition of over 11 million of the 30 million acres of less than saw-log-size stands will be substantially improved by plantation care, pruning, weeding, thinning, release cutting, reinforcement planting of lightly stocked areas, and planting new burns in these stands.

Water Resources

In continuing their role as regulator of waterflows, national forest watershed will continue to be managed in accord with two principal long-range objectives: (a) Protection of the watershed by stabilizing the soil and thereby preserving and improving water quality; and (b) management of the area to increase the quantity of water.

Protection of the watershed and water quality will continue to be a primary objective. Quantity of water yielded will receive major consideration in the multiple-use management of national forests.

To accomplish these objectives, an accelerated program of watershed management, rehabilitation, and protection will need to be

carried out, including the application of new methods and practices as they are developed and proved.

Program proposals for the short-term period include:

1. More intensive management activities to assure full protection of the hydrologic condition of watersheds in the management and use of other resources. Management plans for other resources that involve manipulation of plant cover will adequately consider watershed management needs.

2. Reasonable protection to, and minimizing damage from the greatly increasing number of water development projects in and adjacent to the national-forest system.

3. Preparing and maintaining watershed management plans for areas which are the sole or major source of municipal water supplies.

4. Initiating field inventories of water supplies and yield with comparative data as to effects on water yield and quality of range, timber, and other uses and management practices.

5. Complete soil surveys on about 33 million acres, or 22 percent of the total area in need of survey.

6. Watershed rehabilitation measures to stabilize gullies and channels, control sheet erosion, stabilize dunes and earth slides, control erosion on roads and trails, and accomplish water spreading will be done in varying degrees ranging from one-tenth to one-third of the total work needed. Work scheduled includes 10,000 miles of gully and channel stabilization; 1.3 million acres of sheet erosion control; 20,000 acres of dune and blowout stabilization; erosion control on 14,000 miles of substandard roads and trails; 5,600 acres of water spreading; 535 structures for flood prevention; and 170 stream pollution control projects.

Range Resources

The development and management of the 68 million acres of rangeland in the national-forest system has two major long-range objectives:

(a) Proper stocking and improvement of the range resource to achieve desirable watershed conditions and sustained high-level production of forage. Over many years the Forest Service has attempted to bring livestock numbers into balance with available forage. This is being done by building up forage production through reseeding, other range-improvement measures, and better management. Where this is not sufficient, necessary adjustments to grazing capacity have been made in either numbers of permitted livestock or season of use.

(b) Making lands suitable for livestock grazing available for use under conditions that promote stability for communities and individuals, and encourage full development of the range resource with due regard to other resources and uses.

These policies can be furthered by intensifying management of all range allotments; obtaining and maintaining desirable forage to high capacity; constructing, rehabilitating, and maintaining range improvements needed to attain intensive management on all ranges; and making adjustments in numbers of livestock or seasons of use when necessary.

In order to make substantial progress toward the long-range objectives, the short-term program proposals are:

1. Complete and thereafter keep current range analyses and management plans on all range allotments.

2. Where stocking adjustments are necessary to balance utilization and available forage, these will be carried out as rapidly as practicable bearing in mind the needs of the range and other factors.

3. Separation of cattle and sheep grazing on common use areas, and substantial reduction of livestock trespass.

4. Properly cordinate all range use with other resource use.

5. Revegetation and control of noxious or poisonous range plants and farm weeds will be undertaken on about 4.4 million acres of rangelands needing one or both treatments.

6. Reconstruction or rehabilitation of presently deteriorated range improvements will be completed; other improvements will be maintained.

7. Construct 18,000 miles of fences and 9,500 water developments to initiate programs of intensive range management for control of livestock and more efficient use of forage.

Recreation and Wildlife Habitat Resources

As previously described, the growth and development of the Nation already has had a terrific impact on the national forests in increased use of the recreation and wildlife habitat resources. It is estimated that these uses will rise from the 68.5 million recreation visits of 1958 to 130 million visits by 1969, with a continued rapid annual increase to a possible 600 million visits by the year 2000. This expected increase to nearly double the present use by 1969 and about nine times the present use by the year 2000 is far in excess of the expected rate of increase in population.

The long-range objective is that: (a) National-forest recreation resources will be so developed and managed that the kind, quality, and quantity of their development and maintenance will be sufficient to keep abreast of this tremendously increased demand; and (b) the wildlife habitat will yield a fish and game population adequate to meet the equally tremendous increase in sportsmen use.

The program proposals for the short-term period are:

1. Complete part 1 of Operation Outdoors, which is a 5-year program initiated in 1957 to reconstruct and rehabilitate the then-existing recreation facilities consisting of 4,700 campgrounds and picnic sites containing 42,400 family units, construct additional facilities, and adequately maintain and service these facilities to meet the existing and predicted situation.

2. Complete inventory and evaluation of recreation and wildlife habitat resources. This will be done partly in cooperation with the Outdoor Recreation Resources Review Commission, and with respect to wildlife habitat resources, in cooperation with the States.

3. Revise and complete recreation management plans for all administrative units and thereafter keep them current.

4. Prepare and execute development plans on 10,000 new campground and picnic sites containing 102,000 family units.

5. Repair and reconstruct dams and spillways as necessary in order to place them in a safe condition for recreational use.

6. Provide adequate sanitation, cleanup, safe water, fire prevention, and public safety at all developed recreation sites and in heavily used unimproved areas.

7. Protect and manage wilderness-type, roadside, and other special areas.

8. Review at least 30 of the remaining 41 primitive areas as to their wilderness characteristics and reclassify them accordingly.

9. Revise and complete wildlife habitat management plans for all administrative units, assuring proper coordination between uses of wildlife habitat resources and other resources.

10. Participate in planning, inspection, and control phases of all habitat improvement projects conducted on lands of the national-forest system by States and by other Federal agencies to insure that the projects will benefit wildlife and be in harmony with other resource values.

11. Improve food and cover on 1.5 million acres of key wildlife areas.

12. Develop wildlife openings, food patches, and game walkways in dense vegetation by clearing or controlled burning on about a half million acres.

13. Improve 7,000 miles of the 81,000 miles of fishing streams and 56,000 acres of lakes by stabilizing banks, planting streamside cover, and constructing channel improvements.

*Protection*

The total adverse impact of disease, insects, fire, weather, destructive animals, and other forces on the uses and values of forest resources is not generally recognized. They kill and destroy, retard or prevent reproduction and growth, impair and damage values, and disrupt uses.

The total growth impact on sawtimber from destructive agencies in the continental United States and coastal Alaska in 1952 was estimated to be equal to 92 percent of the net sawtimber growth. Cause of the impact on sawtimber growth was distributed 45 percent to disease, 20 percent to insects, 17 percent to fire, and 18 percent to all others.

These destructive forces also have a seriously adverse effect upon the watersheds and their life-supporting waterflows, and upon the other renewable forest resources.

The long-range objective is to hold the damage from destructive agencies below the level which would seriously interfere with intensive management of the national-forest system under principles of multiple use and high-level sustained yield of products and services. This can be accomplished substantially by a continued trend toward better facilities and techniques for fire control and more resources to cope with critical fire periods, and a more intensive application of a program of prevention, detection, and control of insect and disease infestations. In addition to direct protection measures, more intensive management of timber resources will result in reduction of losses from insects and disease.

Protection From Insects and Disease

In the short-term period, it is proposed that insect and disease control on the national-forest system be stepped up to a level of prevention, detection, and control of insect and disease infestations that will substantially reduce the occurrence of large infestations toward the end of the initial period. This will require about a 50-percent increase over the present level of protection. The work will consist of:

1. Intensification of present activities through (a) quicker, more extensive, and more thorough surveys to detect incipient outbreaks; (b) more reliable evaluation of the potential of initial outbreaks to cause widespread damage; (c) quicker and more effective control action in the initial stages to prevent a large-scale epidemic. The initial suppression activities would cover about twice the acreage currently being treated.

2. Continuation of present blister rust control work plus extension of control to 250,000 acres not now protected but which should be managed for white pine production. The objective is to achieve sufficient effectiveness of control on all of the area now under treatment plus the additional acres so that after the initial period only maintenance control will be needed.

3. Initiating a program to control dwarf-mistletoe on several hundred thousand acres of selected better stands of young softwood sawtimber on better growing sites.

4. Coordination of timber harvesting with pest control objectives in order to reduce the loss from high-risk old-growth trees and to reduce the possibility of old-growth stands serving as a focal point of infection.

Protection From Fire

It is proposed that by the end of the initial period all commercial timberlands, all critical watersheds, and other lands in the national-forest system developed or proposed

for intensive use will be given protection from fire adequate to meet the fire situation in worst years and under serious peak loads. This will include 125 million acres compared to 23 million acres now receiving such protection. An additional 15 million acres will be given a lesser degree of protection but adequate to meet the average fire situation.

Meeting these levels of protection from fire calls for:

1. Expansion, modernization, and development of fire control to a proficiency and strength of force which will prevent as many fires as possible and suppress fires before they spread beyond permitted standards. This is to be accomplished by nearly doubling the present level of preventive effort, detection, skilled firefighting crews, training, supervision, and equipment.

2. Development and use of new and modern techniques for prevention, for suppression of fires while small, and for stopping large fires while running and burning intensely.

3. Reduction of hazardous fuel conditions to minimize the chances of large fires developing and spreading to high-value areas. This work will cover the most serious one-fourth of all land needing such treatment, and will consist of burning 300,000 acres of highly hazardous debris concentration, felling snags on 320,000 acres of high lightning-occurrence areas, prescribed burning on 3.5 million acres, removing roadside fuel on 37,000 acres, and clearing and maintaining 12,000 miles of firebreaks.

Protection From Other Damage

Rodent control work for the short-term period will be aimed at control of the most serious infestations of harmful rodents, such as porcupines and mice, on high-value areas of forage and commercial timberlands. These areas comprise about half of the total area of rodent infestation on the national forests. Approximately 1.8 million acres of rangelands and 9.4 million acres of timberlands would be treated in this period. Control would be limited to those rodents for which economical means of control are known.

*Roads and trails*

The road and trail system which serves the national forest lands is a complex of highways and access roads and trails under various ownerships and jurisdictions. This transportation system is vital to the multiple use of all the resources of the national forest system.

For administrative purposes, the road and trail facilities are grouped into a forest highway system and a forest development road and trail system. All these facilities benefit the national forests. There are now 24,400 miles of forest highways; 149,700 miles of forest development roads, and 112,200 miles of trails. When fully installed, there will be about 70,000 miles of forest highways; 542,000 miles of access roads, and the trail network will be reduced to about 80,000 miles.

The forest highway program is administered by the Bureau of Public Roads in the Department of Commerce. The forest highways are therefore not included in the program herein outlined.

An adequate system of roads and trails is essential to proper management of forest lands. The presence or lack of access roads has a direct and controlling influence on many phases of forest management, such as the volume of timber that can be marketed; the size, duration, and distribution of sales within working circles; the level of salvage cutting; protection of national-forest resources from fire, insects, and disease; and recreational and forage use.

Financial losses occur every year to the Federal Government through inability to market mature timber now inaccessible but in need of harvesting, and to promptly and completely salvage losses resulting from fire, windstorms, insects, and diseases. As the road and trail system is expanded the revenue to the Government increases, primarily through expanded timber sales. Timber access roads for the national-forest system are investments which will pay for their own way over a period of years.

The long-range objective is to have and maintain a system of roads and trails to service the national forests adequately at the levels needed to meet expected demands. Such a system will not only make that possible, but will at the same time enhance the value of the timber and other resources being utilized.

Construction of about 392,600 miles of new roads and 6,000 miles of new trails will ultimately be needed, along with reconstruction of about 112,600 miles of roads and 11,300 miles of trails. Also about 41,400 miles of existing trails will be replaced by construction of new roads.

In the short-term period the program proposals are:

1. Complete construction and reconstruction of about 90,000 miles of access roads and 8,000 miles of trails. This constitutes about 19 percent of roads and trails included in the long-range objectives. Approximately half of the value of the work on timber access roads planned for this period will be constructed by national-forest timber purchasers, but paid for by the Government through adjustment of stumpage prices.

2. Provide maintenance to full standards on the 261,900 miles of existing development roads and trails and on 58,600 miles of new construction.

*Land adjustment and uses*

Effective management of the national-forest system requires reasonable consolidation of ownership where there are intermixed public and private lands. Accomplishment of these ownership adjustments will contribute much toward meeting resource demands by the year 2000 and will be largely accomplished by that time.

In the initial period, national-forest boundary and ownership classification studies will be completed for all national-forest lands as the basis for landownership adjustment. Such adjustments will be brought about mainly by exchanging on a land-for-land basis approximately 1.4 million acres of scattered or checkerboard national-forest parcels for other lands needed to consolidate the national-forest land pattern. This will (a) enable national-forest boundaries to be modified to exclude about 11 million acres of private and State land from within national-forest boundaries; and (b) materially reduce the checkerboard pattern of ownership. Special attention will be given to completion of consolidation of national-forest ownership in the boundary waters canoe area and in certain key watersheds of the Cache National Forest in Utah. In addition, about 217,000 acres of land utilization project lands will be exchanged in the initial period to promote more effective management of such projects. Thereafter there will be a continuing program in the national forests and related areas to adjust ownership problems and further consolidate these public properties.

There must also be accomplished in the short-term period: (a) Development of an improved and more adequate land status record system with provision for continuous maintenance; and (b) establishment and marking of public property corners and the surveying and posting of over 100,000 miles of property lines between national-forest and other lands which now are inadequately located and marked.

The uses of national-forest lands for many special purposes, including the extraction of mineral resources, will continue to increase at a rapid rate. The supervision of these uses will need to keep pace in order that such uses can be properly correlated into multiple-use management of the national-forest system, and to prevent unauthorized use. The program for the determination of surface rights which has been underway since the approval of the act of July 23, 1955, will be completed.

*Administrative structures and equipment*

To facilitate the resource management and development work, construction and maintenance of administrative and fire-control improvements will need to be provided at an increased rate in the short-term period. This will consist of completing the present backlog of housing needs for field officers and of administrative and fire improvements, and the construction of additional housing and improvements. New construction needs include 2,730 dwellings and related improvements, 2,710 service buildings, and 530 lookout structures. Completion of the communications system needed for protection and management of the national forests will require 2,000 additional radios and replacement of 9,000 radios and 3,000 miles of telephone lines. The increasing use of aircraft as an efficient and economical means of transportation for protection and management of wild lands will require an additional 25 landing fields and reconstruction of 37 existing fields.

*Research*

Forestry and allied research is needed to keep the national forests and the utilization of their resources moving ahead on an efficient, effective, and economical basis to play their proper role in the progress and development of the Nation. Resource managers and administrators need answers to their everyday problems. Resource development, management, protection, and utilization have an additional need, and organized research has an additional objective to achieve significant breakthroughs that will show the way to new methods and new horizons in the management of timber, soil and water, forage, wildlife habitat, and recreation resources. The short-term research program is needed to yield both quick results of applicability during the initial period, and information of value in attaining long-range objectives.

The research proposals for the initial period embrace work that should yield information of wide application of high value. These proposals include—

1. Accelerated research in forest genetics to produce trees superior to present ones—in growth rate, wood quality, resistance to insects and diseases, and other special qualities—for use in the needed planting programs on national forests.

2. Development of new cultural practices to increase the production of high-quality seed through establishment and management of seed orchards; better methods of harvesting, storing, and processing of seed; and more efficient planting practices, including direct seeding with aircraft.

3. Better implementation of the national-forest pest control program by developing a broader knowledge of the life histories of damaging insects and diseases and of new methods for controlling them through use of diseases and predators of the pests themselves, as well as through improved selective chemicals for use in direct control action.

4. Better implementation of the national-forest fire control program by developing a better understanding of fire behavior and new techniques and equipment needed to eliminate the runaway fires now responsible for 90 percent of fire losses in the national-forest system.

5. Development of new and improved practices required to facilitate good watershed

management so vitally important to the management of national-forest timber and range resources. This will include studies of water yields, both quality and quantity, and management of snowpacks at high elevations and soil stabilization.

6. Design and evaluation of new and improved equipment for logging without damage to watershed values—as by an overhead cable system in order to extend harvesting operations into steep mountainous slopes not now operable by ground skidding methods; and equipment to increase the efficiency of woods utilization of forest products.

7. Improvement of volume and yield tables, rotation age data, and other information for regulating timber growing-stock levels for use in the national-forest timber-management plans.

8. Development of silvicultural bases to guide timber harvesting and regeneration practices in new forest types and areas, particularly in Alaska and the more remote areas of the western national forests to be newly reached in sustained yield operations.

9. Continuing investigations of the physical and chemical properties of wood and of processing methods to increase the efficiency of forest products utilization from national-forest timber sale areas.

10. Development of new uses for the large volume of low-quality timber, for logging and milling residues, and for thinnings in order to broaden the utilization and market base, and to facilitate timber sales and sustained yield management.

11. Development of log and tree grades and other information needed in the marketing of national-forest timber.

12. Development of improved livestock grazing management practices on the national forests to increase forage yields and to protect watershed values.

13. Develop methods of improving national-forest wildlife habitat through modified timber and range management practices, as well as through development of special measures such as propagation of browse and other game foods.

14. Determination of the needs and preferences of recreational uses of the national forests, and of the carrying capacities of campgrounds and other recreational areas in order to guide the development and management of the recreational resources.

15. Provision for laboratories, greenhouses, and other facilities, including modern scientific equipment, required to adequately implement the research program. This will consist of expansions through new construction and betterment of existing facilities. The needs include 17 specialized laboratories and related greenhouse and service facilities for the basic research on forest insects and diseases, tree genetics and physiology, forest soils and hydrology, forest fires, and forest products, and for development of new equipment for firefighting and for harvesting timber; 5 office-laboratory buildings at regional headquarters of forest and range experiment stations; 25 office-laboratories at centers of field research, and minor structures, fencing, stream gages, and other research installations that will be required on about 100 experimental forests and ranges.

*Program benefits*

Under the proposed program, management and utilization of national-forest resources will keep pace with population growth and national economic development and needs.

Many of the benefits from the program for the short-term period will carry over or will be delayed until after the end of the period. Investments in such measures as roadbuilding, tree planting, range reseeding, water conservation, research, recreation, and other improvements proposed in the initial period are geared not only to short-term needs, but also to the longer-range objectives of meeting expected demands on the national forests during the remainder of the century.

Benefits include direct financial revenues, secondary benefits, and intangible values.

Direct financial revenues from the national-forest system will rise to about $210 million annually by the time the short-term conservation program is completed, or double current receipts. Over 90 percent of such revenues will continue to come from the sale of standing timber. By the year 2000 national-forest timber sales should reach 21 billion board-feet of sawtimber worth $350 million at 1958 prices.

Payments from national-forest revenues for county schools and roads will increase correspondingly. These increased payments to counties coupled with increased national-forest expenditures for roads and fire control, will exceed the taxes that the national-forest system would pay, if subject to local taxation, by an even greater margin at the end of the initial period than at the present time.

The capital value of the timber, forage, and lands of the national-forest system will have increased by about a billion dollars as a result of the short-term conservation program.

In addition to direct financial income to the United States as a result of the national-forest conservation program, there will be both substantial secondary benefits and very real intangible benefits.

Secondary benefits include such things as numbers of people employed in the harvesting of national-forest timber and other products and the value added to those products by manufacture, distribution, and marketing.

In timber alone, it is estimated that for every dollar of national-forest stumpage sold the end products wil be worth $20 by the time they reach the ultimate consumer. This means that the annual sale of 11 billion board-feet of sawtimber expected to be reached by the end of the short-term period will have a total consumer value of $3.7 billion.

Furthermore, some 620,000 people will derive their livelihood from the harvesting, processing, hauling, and merchandising of national-forest timber and the products made therefrom. This wil be an increase of 60 percent over the current level.

Similarly, the value of meat, hides, wool, and other livestock products increases with reprocessing and handling as do the numbers of dependent people.

It is estimated that reactional use of the national-forest system will reach 130 million visits by 1969, in contrast to the 68.5 million visits in 1958, and a probable 600 million by 2000. The recreationists making these 130 million visits will put into trade channels a total of nearly a billion dollars for sporting equipment, transportation, licenses, lodging, and other items.

Most of the truly intangible values of the national forests are experienced by those millions of people who use the national forests for reasons other than commercial utilization of resources. No measure of value expresses the worth of the relaxation, pleasure, rest, spiritual satisfaction and improvement in health derived from the national forests.

No realistic dollar value can be placed on water from the national forests. Water is already the most precious commodity in the West and over half of all waterflow in the West originates on the national forests. These lands will continue indefinitely to be indispensable regulators of the kind and amount of fresh water available to western people. The national-forest conservation program will improve soil stabilization, result in more regular streamflow, and enhance water quality. It will foster infiltration of water in underground storage. These results will lessen the need for construction of surface reservoirs, settling basins, and other water construction works.

Nor can there be any complete assessment in dollars of the lives saved, damage prevented, and resources preserved by improved accessibility, suppression of insect and disease epidemics, fires prevented or controlled when small, and reduction and prevention of floods. All of these are benefits of the conservation program proposed for the national forests.

Substantial progress has been made. The foundation for progress is in place. This program builds on that foundation. The result will be full development of these extensive and valuable public properties.

## If You Want the Services, Someone Has To Pay

EXTENSION OF REMARKS

OF

### HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. ROBISON. Mr. Speaker, while all of us in this Chamber are wrestling with problems of the Federal budget, I believe attention should be called to an editorial appearing in today's issue of the Baltimore Sun.

This editorial points up the sensible Republican approach to budgetary problems in my State of New York. We often hear that the public is demanding the additional services and programs we are asked to enact. This demand may or may not be factual, but assuming for the moment that it exists, then the bill has to be paid by someone and the municipalities, other governmental units, and individuals who seek benefits of some sort from the Federal Government should be made to realize this simple fact.

In New York State, the fact is being brought home rather dramatically that because of the continuance of programs during the past administration in Albany without a commensurate tax increase to cover additional cost, the State of New York was faced with prospects similar to those now plaguing the State of Michigan. Therefore, on the theory that the people want the additional services and are willing to pay for them, the New York State budget will be balanced this year.

If the day comes when the individual taxpayer believes that their heavy taxes are too great a cost for the services he receives, presumably this demand will be changed to a demand for less services resulting in less taxes.

NEW YORK MODEL

Still betting that the people want unbalanced Federal spending and more inflationary depreciation of the dollar, a group of House Democrats have put in a bill for another billion-dollar program outside the Eisenhower budget plans. This would go for loans at low interest to municipalities, mostly for water and sewage systems. The plan would supersede the present Housing and Home Finance Agency program, which, to be sure, has only $100 million lending power. The House Democrats would lend

the new Federal money at 2⅞ percent interest.

But on the very day that these new spending plans were reported, the Government itself was borrowing money. What's more, it had to offer 4 percent for it—4 percent on $1.5 billion in 4-year notes and 4 percent on $500 million in 10-year bonds. In other words, the backers of the House bill ask the Treasury to lend money at 1⅛ percent less than the money costs to borrow. This, obviously, is no way to balance budgets.

The wistful explanation of the House bill's backers is, however, that many municipalities want services which they can't supply out of present revenue. That is undoubtedly true. But there are ways of meeting the problem other than new assistance from Washington. One such way has just been demonstrated all over again in the General Assembly of New York. There a new State tax program of $277 million has been enacted to support the new and costlier services demanded by the people of the State. And the assembly also approved an additional $125 million in New York City taxation for more municipal spending.

It is true, of course, that New York State and city are rich communities. And, rich or poor, communities have to have water, sewage, and other such services. But also important is firm Federal budget practice, with the stable dollar and the secure handling of the prodigious national debt which only firm budget practice can assure. Certainly localities should never be permitted to forget the steady—and still preferred—alternative to leaning on Washington. That is, leaning on themselves.

## Marketplace, Not Manufacturer Nor Congress, Sets Prices

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, what Congressman, bureaucrat, judge, or jury can tell you the "prices that are adequate to stimulate—and low enough to enable"—page 2, H.R. 1253, fair trade bill.

They cannot. It takes thousands, even millions of buyers, a free people in a free society freely bargaining for competitive merchandise at a mutually agreeable price. The price naturally results then like water seeking its level.

Now comes Congress to tell the public that from now on by Federal decree, we will let manufacturers tell the retailer what price they must charge. Are manufacturers all-knowing? Can they set the prices substituting the resale price maintenance of the fair trade bill for the spontaneous price setting of people in the market place through supply, demand, and competition? Yes, anyone can set a price, but who will buy if the price is too high? And if they do not buy who is hurt—the consumer?

Possibly so, but most hurt will be the retailer for whom the fair trade bill is intended. Meanwhile, the big competitor chainstore or department store with his own brand merchandise cleans up. Fair trade indeed.

## West Virginia's Request for a North-South Route To Be Included in the Interstate High System

EXTENSION OF REMARKS
OF
### HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mrs. KEE. Mr. Speaker, last week, on March 19, it was my privilege to attend an important conference here in Washington with reference to West Virginia's urgent request for the addition of a north-south route to be included in the Interstate Highway System.

Present for this conference, which was conducted under the chairmanship of Representative ARCH A. MOORE, JR., of West Virginia, were Commissioner E. L. Armstrong and other officials of the U.S. Bureau of Public Roads; State officials and citizens of the State of West Virginia under the leadership of Gov. Cecil H. Underwood, officials and citizens of the State of Pennsylvania under the leadership of the Honorable Parke Martin, who attended both as secretary of highways and the authorized representative of Gov. David L. Lawrence; interested Members of the Congress from the State of Pennsylvania; and our West Virginia congressional delegation under the leadership of Senator JENNINGS RANDOLPH and Senator ROBERT C. BYRD.

Representatives and spokesmen from both Pennsylvania and West Virginia were unanimous in recommending an extension of the interstate route from Washington, Pa., to Beckley, W. Va., and to continue to the West Virginia-Virginia border in the immediate vicinity of my home city of Bluefield. This requested extension will connect the Great Lakes and Florida.

Mr. Speaker, I strongly feel that the benefits which may be derived from allocating the some 200 miles requested for this specific route fully justify this request.

In addition to the advantages this route would provide for national defense—the closest available sheltered north-south route in the East, protected by the Allegheny Mountains—the availability of adequate underground area for protecting industrial facilities, and so forth, this route would help West Virginia's present industries to expand and help West Virginia attract new industries and create vitally needed new productive payrolls.

West Virginia suffers more from unemployment and lack of prospective job opportunities than any other State in the Union.

Mr. Speaker, nature has given West Virginia some of the most beautiful scenery to be found in the world. One of our brightest economic spots lies in the attraction of tourists. One of our difficulties today is the lack of adequate roads and highways. This proposed route would provide an accessible avenue which would greatly benefit our entire State. Even with the present handicap, tourism now ranks in dollar value as the third most important income producer in West Virginia, following mining and manufacturing. I understand that $240 million was spent in our State by tourists during 1958.

Additional highway construction would provide employment for thousands of our presently unemployed. Private industry would then be able to develop facilities to better accommodate the traveler who would enjoy the great natural beauty of our State of West Virginia.

While I deeply appreciate the careful consideration that will be given by officials to this request—in the event mileage should become available in the interstate program—the fact remains that 41,000 miles have been allocated, with the exception of a small amount reserved for contingencies. Therefore, I am happy to introduce in the House a bill to amend the Federal-Aid Highway Act of 1958 (72 Stat. 89) to provide additional funds for the construction of highways in labor surplus areas. This measure is identical to S. 423 which is presently pending in the U.S. Senate.

Mr. Speaker, it is my hope that similar legislation will be passed by this Congress, and I am grateful to be privileged to give this proposal my full and complete support.

## Free People Need Free Prices for Progress

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, it is argued that the fair trade bill, H.R. 1253, will give the price protection needed because there are other forms of Manufacturers' control of prices at retail such as selling on consignment and manufacturer-owned retail stores. If a manufacturer is really interested in controlling the retail price, then maybe that same manufacturer should assume some of the risks which manufacturers assume when selling on consignment or when owning the retail outlet. Risk and responsibility are part of consignment selling and owning retail outlets, but what are the additional responsibilities and risks which will be assumed by the manufacturer under this resale price maintenance bill?

The rise of the so-called discount house is used as an argument for enacting a Federal fair trade bill, but a study of the discount house indicates rather strongly that State fair trade laws stimulated its growth. A high, well advertised price with a wide profit margin naturally stimulates such competition. Since when is Federal law designed to assure a guaranteed fat profit?

The truth of the situation concerning the entire fair trade genesis may be

found to be resistance to better merchandising, a fighting of the progress in more efficient merchandising and distribution. But progress we will, with or without the Federal mandate of a fair trade bill, conceived in shortsightedness. Customers will demand greater efficiency, better production, distribution, and merchandising—that is, so long as they are a free people.

## Brave Men and Great Captains

EXTENSION OF REMARKS

OF

### HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. ADDONIZIO. Mr. Speaker, Mr. Eugene F. Kinkead, of South Orange, N.J., has kindly sent me the following extract from the review of "Brave Men and Great Captains" in the New York Times, March 12. I agree with Mr. Kinkead that this is worthy of a place in the CONGRESSIONAL RECORD. Perhaps some reader of this RECORD will know the identity of this hero still unknown. I am also asking the Department of the Army whether their efficient record system can produce any information on him.

At any rate, let us hope that this man was given in peacetime the opportunity so freely given him in war to demonstrate his qualities of leadership, courage, and tenacity. As Mr. Kinkead observes:

We must aid our colored citizens in securing the place in our country to which they belong.

The excerpt reads as follows:

Well, the theory and the art of war have had many manifestations in our history. One of the most moving examples cited by the Dupuys concerns an episode during the Battle of the Bulge in World War II when two regiments of the 106th Infantry Division were having a rough time of it in the Schnee Eifel hills.

A HERO STILL UNKNOWN

"A group of infantrymen," the Dupuys tell us, "shocked by the sudden burst of enemy fire all about them, huddled in a daze. Out of the woods behind them stalked one lone, large, Negro soldier, tommygun nonchalantly tucked under an arm laced by a corporal's chevrons.

"He approached a wounded officer,

" 'Colonel, sir, you-all seem to be alone here. I'm from the 333d Field (an artillery unit also smashed in the action). Anything you want me to do?'

" 'Get that platoon organized, corporal. Move north, covering the flank.'

" 'Yes, sir.'

"And magically, it seemed to that watching officer, to the booming voice of a corporal who knew when he was in command and knew his trade—leadership—the demoralized platoon fanned out and moved forward, fighting men once more."

The corporal's deed epitomizes, the Dupuys add, the will to win. They would like to know his name. Surely, somewhere in the mountainous records of the War Department, in the memories of men who were in those outfits, it can be found. We may need a good many men like that still nameless corporal in the years ahead.

## What Are the Farmers Really Getting?

EXTENSION OF REMARKS

OF

### HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. JOHNSON of Wisconsin. Mr. Speaker, the Washington Spotlight column in the March 1959 National Grange Monthly made a number of telling points in answering some of the most common pieces of misinformation that are currently making the rounds about farmers. For example, the columnist pointed out that while the cost of eating has increased in the past 10 years, the cost of food has risen very little.

In 1948, farmers received 51 cents out of every dollar spent by the consumer for food, with the other 49 cents going for processing, transportation, retailing and other farm-to-market costs. By 1958, the farmer's share of the food dollar had shrunk to only 39 cents, while marketing costs had increased to 61 cents. Figures like this dispel the myth of the farmers getting fat at the expense of the consumers.

Under leave to extend my remarks, I would like to include this column from the National Grange Monthly in the RECORD:

SPOTLIGHT ON AGRICULTURE

A good coondawg is a noble animal and ought never to be kicked in the slats. It discourages him and gives him an inferiority complex, and pretty soon he will just bay at the moon and let the coons be.

Any good coonhunter knows that. And, where do you suppose this country would be today if it had not been for coondawgs. Why, it would be overrun with coons, of course. Even as it is there will always be some coons.

We like to hunt coons; always have. That's one of the reasons why this column is called the Spotlight. When you hunt coons you take along a spotlight, and when the dawgs have treed the varmint you shine the light in his eyes.

Then when you have the critter in range you take dead aim and you pick that ringtail right off the limb. We like to skin 'em and nail their hide to the barn door. Some think that is not a very sporting thing to do, but the coons we've known are no friends of farmers. They raid his chicken coop and stead his hens.

The coons we are gunning for are those who attempt to convince the country that farmers, under present programs, are spending their winters in Florida and robbing the country blind through huge farm subsidies. The woods are full of them.

Some of the big city magazines and newspapers, probably more out of ignorance than malice, have been repeating and enlarging on those falsehoods. The Grange knows that many of our present farm programs are far from perfect, and it has been doing its best to promote sound programs.

Before that can be done we may need to clean some coons out of the woods. We've got plenty of facts for ammunition, if we only use them. Facts are the only thing they are afraid of, and the only thing that can undo some of the damage they are causing.

Congress' job in developing sound farm programs is made immeasurably more difficult by the misunderstandings being created in the minds of people who do not know the facts. The vacuum we leave by indifference to these falsehoods is being filled by demagogs who peddle misinformation.

One of the worst of those canards is the oft repeated statements that the Government is spending $7.4 billion a year to guarantee farmers high prices and huge payments out of the Treasury. That has been repeated so often it is beginning to be believed by too many people.

The fact is Government supports do not guarantee high prices. If farm prices had gone up by as great a percentage as either industrial wages or farm costs in the past 10 years the Nation's food bill would be at least $10 billion a year larger than it is.

The subsidy charge is equally false. The cost of price supports is charged against farmers when, as a matter of fact, the commodities accumulated by the Government have been distributed almost entirely through such programs as foreign aid, the school lunch, and distribution to needy city people in this country.

Direct payments to farmers are almost exclusively for soil conservation; for the preservation of our irreplaceable national resource. That is no more a subsidy than the huge sums spent for improvement of our rivers and harbors are a subsidy to shipping companies, to mention only one example.

We spend billions a year for slum clearance and other programs to help raise the living standards of people in cities. We've never heard a farmer complain that their taxes are going to subsidize poor people in cities.

Our only complaint about the money being spent in the name of agriculture is that it is not doing the job of correcting the situation that exists in agriculture. It would be as foolish to abandon our efforts to develop a sound program as it would be to continue indefinitely the present programs.

There is no need to wreck agriculture in order to get rid of some of the faults in our present programs. It would make just as much sense to abandon our public schools because we think they are not all they should be.

There has been a lot of misinformation spread about farmers, but there is a Wall Street tycoon who writes a daily, front page column for the New York Journal of Commerce who takes the door prize for being out on the longest limb.

He has found a way to blame farmers for the increase in wages of industrial workers. High food costs, he says, are the explanation. If that isn't putting the cart before the horse, it'll do for a start.

The high cost of food has been played up so much that most people are misled. The cost of food has gone up very little in the past 10 years, though the cost of eating has increased, but only because a greater part of our diet is made up of better and more expensive foods and fancy packaging.

In 1948, the USDA reports, the retail cost of the family food market basket (the amount spent for typical foods by a family of four) was $982. By late 1958 that had increased to $1,049, a rise of only a little more than 5 percent.

The farm value of that food in 1948 was $497. By late last year it had declined to $407, a drop of almost 20 percent. During the same period farm prices declined from 100 percent of parity to 80 percent of parity.

In 1948 the processing and handling costs, made up largely of wage costs, of the basket was $481. Latest figures for 1958 show the costs from farmer to consumer was $642, an increase of more than 30 percent.

In 1948 farmers received 51 cents out of each dollar spent by consumers for food, and 49 cents for processing, transportation, retailing and other farm-to-market costs. In 1958 farmers' share had shrunk to only 39 cents, and marketing costs—chiefly higher labor wages—had increased to 61 cents.

To rob a farmer's chicken coop and then try to place the blame on that farmer, is a trick no self-respecting coon would think of. For all their sneakiness, they have some decency.

A four-legged coon is supposed to be a smart animal, but some of the two-legged breed are imposing their ignorance on others. There can be no excuse for that.

---

## Noise Could "Blind" Enemy Subs

EXTENSION OF REMARKS

OF

## HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. OLIVER. Mr. Speaker, comparing our present oceanic research program with that of the Soviets is similar to comparing a molehill with a mountain. We have recognized the advent of a technological revolution in outer space and have invested vast sums in attempting to unlock scientific secrets. In underseas research, far-sighted scientists have also recognized the importance of new technologiacl discoveries; however, our country has neglected to invest enough funds to finance the effort that is needed to overtake and surpass the Russians.

The following article which originally appeared in the New Bedford, Mass., Standard-Times, fully describes the magnitude of the task that our country faces. Not only are we already behind in this deadly race, but it is estimated that adaptation of new scientific advancements to the fleet's operating equipment takes 4 to 5 years longer in the United States than it does in Russia. Thus our country is like the baseball player who starts out with a count of two strikes against him. If we wish to survive, we can't afford to continue our ostrichlike attitude but must immediately launch an all-out oceanic research program as soon as possible.

I would like to take this opportunity to publicly congratulate Mr. Everett S. Allen, author of the following article, who recently was awarded the National Headliners' Club silver medallion for his series on oceanography. This series of 13 articles was selected as the best domestic news series or feature published in 1958 by daily newspapers in the 50,000 to 100,000 circulation class. Mr. Allen's series deserves recognition not only for its journalistic excellence but also as a service to our country in publicizing the necessity for an accelerated program of oceanic research.

(The article is as follows:)

NOISE COULD "BLIND" ENEMY SUBS

(Whether it be for war or peace, the oceans of the world probably hold the secret to humanity's future. The nation that unlocks those mysteries first will direct the future course of mankind. One of the world's outstanding ocean-study centers is the Woods Hole Oceanographic Institution. There and at other marine-science research centers in the East, the Standard-Times conducted a 2-month study to determine who is ahead. These stories tell the results of that research.)

(By Everett S. Allen)

The United States could overcome the military advantage of 460 Soviet submarines by flooding the ocean with sound to make them "deaf," rather than by attempting to build 460 subs of its own. Any submarine operates principally by listening, from a position of concealment, with its underwater sound gear, until it picks up the noises of a target—the propeller thrash, for example, of a transport or cargo vessel.

Remaining submerged, the submarine uses its electronic, radio, or mechanical "ears" to check the course and speed of the target. The data it obtains by listening governs the torpedo settings.

Fill the ocean with sound, just as Russia now jams the airwaves behind the Iron Curtain to interfere with Voice of America broadcasts, and the submarine's "ears" would be rendered useless. It would have to surface to find its targets, and once it has done that, it has sacrificed its principal advantage—the ability to operate in concealment.

OTHER DEFENSES SEEN

A lot of official thinking, by both marine scientists and military planners, has gone into this matter of how to meet the Russian sub fleet effectively if it becomes necessary. Making them deaf is just one of the approaches that could be used. Here are some of the other related topics that very likely were discussed at the National Academy of Sciences conference in Falmouth in 1956:

Not long ago, there were those in high places who believed the surface ship was finished, because of its vulnerability to air attack. Indications now are that this view has been shelved and there are good reasons why the surface vessel still has a major role to play in any future war.

Although the Navy very likely will lay emphasis on going underseas, the sub has some fairly serious Achilles heels. It cannot, for example, carry as big a weight of weapons and countermeasures as can a surface ship.

But if the surface vessels are going to manage to get ahead of the submarine, they are going to have to know a lot about the probable tactics of the sub, tactics that depend on and are related to environmental factors. That's where oceanography and meteorology can help the Navy, if given a chance.

NEW DATA NEEDED

In terms of undersea knowledge, the game of subchasing in the United States still is being played largely according to what was known at the end of World War II. What is needed is much more data on what exists and happens in the deep sea, so that new subchasers can be built with design and equipment aimed at making use of this knowledge.

The environmental factors are vital in several weapon systems and in several aspects of military operations afloat. American sea transport systems must be maintained; nothing is cheaper for this job of supplying allies than surface ships. Undersea transport is 30 times as costly—nearly as expensive as air.

Marine scientists can get the information, given time and support, that will enable the military to make this transport system work most efficiently. As an example, if science found out a ship following the axis of the gulf stream could make an average of 3 extra knots, it would be of inestimable value to Navy convoy and routing officers.

Could surface ships defend themselves against aircraft?

Those who know ships best say they can. The basis of a good ship defense against planes might well incorporate short-range antiaircraft weapons with atomic warheads, homing devices and a good detection system.

STRATEGY CRITICIZED

Some authorities believe the defensive use of atomic weapons has not been considered adequately because so much emphasis has been placed upon deterrent warfare by the U.S. Government. In other words, the whole armament technology has been channeled into offensive weapons which we don't really need, because we don't intend to start a war. If we had spent as much time and money on a good defense, we might be much better off.

How much time do we have to overcome the Russian lead as represented by its submarines?

The big key is how fast the Navy can go undersea—not only in its own subs, but in acquiring vast amounts of knowledge of what goes on in the deep ocean. Figuring how much time we have to catch up with the Russians also involves leadtime, that is the time it takes to get an idea from the laboratory into the fleet's operating equipment.

Informed authorities say in Russia, this is 5 to 6 years; in the United States, it is 10 years. This is not a science lag, but the result of procurement and training policies. Americans believe in making everything safe—the Russians aren't so particular. It is estimated lead time in the United States could be cut down to 7 years, if we had to.

WEATHER KNOWLEDGE VITAL

Basically, the faster the Federal Government strenghtens and buttresses the marine science sources that must provide it with the information needed to give it an undersea Navy, the faster Russia's lead in ocean war potential will be diminished.

Weather knowledege is one of the biggest factors in this picture. Oceanographic laboratories should pay an increasingly important role in weather research. Marine meteorology should get more money and more attention.

You can't beef up oceanography abruptly, because there are only 300 oceanographers in the country and you would run out of qualified persons. But there are perhaps 5,000 persons in meteorology, some of whom could be made available for this type of project.

U.S. inability to predict weather is regarded as absurd. We have licked many harder problems. In war, particularly, weather is critically important. All detec-

tion systems are weather limited in one way or another. The whole antisubmarine warfare business is dependent on weather. As it deteriorates, ships get deaf on their listening devices, and aircraft see whitecaps instead of the sub's snorkel in their radar.

FORECASTS NEEDED

The commander of a task force needs the best weather forecast possible, not only tomorrow, but maybe for 2 weeks from now. He needs to know what the weather will be, not only where he is, but maybe 500 miles away, where his sonar buoys (sound-emitting buoys utilized in sub detection) will not work if it's too rough. Wave forecasting alone is an important factor for the antisubmarine warfare aircraft system.

Beneath the sea, there is a kind of weather, too, that plays an important part. You can hide in it, and so can the enemy, and therefore, you need to know about it. Even now, when our subs go to a strange area, oceanographers brief the skipper and navigator, so they will know what to expect.

But even the Navy isn't always appreciative of this important job of oceanography. Many Navy officers above the rank of commander still think they can bull through by brute force, and many admirals are former aviators and therefore think only of weather above 30,000 feet.

In reality, however, the air and ocean act as a heat engine, deriving its energy low down, near the water surface; it is this relationship of air and water that makes the sea a major factor in weather influence.

OTHER VITAL FIELDS

There are other vital fields in which marine scientists can help this country get ready for, or prevent, world war III by aiding the Navy's progress in going undersea.

In World War II, sea fighters were concerned with the top 1,000 feet of the water "column" in the oceans. When undersea warfare becomes established, the problem is much more complex, because the entire water column, and the ocean bottom, are involved.

Hearing, by devices, is the key to tracking down subs, or, if you are in a sub, tracking down ships. Sound is bent in water because of differences in temperature, salinity, and pressure. If you don't know these factors as they pertain to wherever in the ocean you may be, you can't correct for the error of bending—therefore, when you get ready to fire at the enemy, your bearing and range calculations will be off.

In World War II, an antisubmarine vessel literally threw depth charges on top of a submarine to attack it; the lethal range of such charges is only about 30 feet, and you almost have to hit the sub to destroy it.

By contrast, if future seafighters put an atomic weapon within a halfmile of an enemy sub, it probably will mean a kill.

Further, it will be necessary to throw the atomic weapon much farther than this because you do not want to be too near it yourself. Thus, subs and destroyers of the future will be fighting each other at ranges of 30 miles or more.

Since ocean fighting will take place at much greater distances, small errors become increasingly important, and precision of greater necessity; seafighters must, therefore, know everything possible about the water in which they are operating.

Marine science must provide all of this data referring to undersea conditions all over the world, so that it can be "cranked into" undersea weapons of the future to make them effective.

This takes time. It would take less if America gave marine scientists more to work with. Whether we can afford the luxury of the leisurely pace we now are forced to adopt is highly debatable.

## Who Is Freeloading on Central Valley Project Power Output?

EXTENSION OF REMARKS

OF

### HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. MOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I present an editorial from the Sacramento, Calif., Bee of March 16, 1959 relating to the proposal of the Pacific Gas & Electric Co. to buy the falling waters of the Trinity River project from the Federal Government.

This timely editorial, in my estimation, is indicative of the way a majority of the residents of the great Central Valley of California feel about the brazen and continued efforts of the P.G. & E. to exploit this federally owned project under the guise of a misnamed "partnership."

The editorial is as follows:

WHO IS FREELOADING ON CENTRAL VALLEY PROJECT POWER OUTPUT?

In introducing new legislation for the misnamed Trinity River power "partnership" with the Pacific Gas & Electric Co., Congressmen CHARLES S. GUBSER, of Santa Clara County, and JAMES B. UTT, of Orange County, charged the Sacramento Municipal Utility District has been freeloading on the Central Valley's project.

GUBSER and UTT must be sadly misinformed about the facts of Central Valley project operations. For if there has been a freeloader in respect to getting Central Valley project power at low rates, it has not been Sacramento Municipal Utilities District but the Pacific Gas & Electric. On this the record is abundant and official.

When Central Valley project came into power production in 1944, only the Pacific Gas & Electric was in a position to take the hydro output. This was due in large measure to the fact the power lobby in Washington had been able to thwart the construction of transmission lines to carry the electricity to the centers of population.

The Pacific Gas & Electric got this power at low rates, some of it at dump prices, for the Government was caught in the bind of either delivering the energy to the Pacific Gas & Electric at a price the utility was willing to pay or letting it go to waste.

Subsequently Sacramento Municipal Utilities District arranged to buy Central Valley project power. In 1956, according to a report of the Comptroller General of the United States, Sacramento Municipal Utilities District paid 4.26 mills per kilowatt-hour for 23.8 percent of the Central Valley project energy. The Pacific Gas & Electric paid 2.97 mills per kilowatt-hour for 30 percent of the project output.

In 1957, the last year for which full figures are available, Sacramento Municipal Utility District paid 4.08 mills for 1,126,000,000 kilowatt-hours and the Pacific Gas and Electric paid 3.66 mills for 1,071,000,000 kilowatt-hours.

If buying power at 4.08 or 4.26 mills makes a free loader of Sacramento Municipal Utility District, what would GUBSER and UTT consider buying energy at 3.66 mills or 2.97 mills makes of the Pacific Gas and Electric?

Moreover, the comptroller general in an audit report to Congress stated the Pacific Gas and Electric has received several hundred thousand dollars worth of Central Valley project energy above the amount it has paid for. He also said the company receives free energy from the project by overcharging for losses on its transmission service. He further stated the company has been excessive in its wheeling charges.

The crowning absurdity voiced by GUBSER and UTT is their statement Sacramento Municipal Utility District seems to be getting more than its share of handouts from the Federal Treasury and from water users of the Central Valley project.

The fact is power sales account for 97 percent of the net revenues of Central Valley project, water sales somewhat less than 3 percent. On this basis it appears Sacramento Municipal Utility District currently is providing about 60 percent of the project's net revenue and in reality is subsidizing the cost of water. Oddly enough, no complaints are forthcoming from the water users.

## Crop Surplus: Pathetic, Fantastic

EXTENSION OF REMARKS

OF

### HON. ALEXANDER PIRNIE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. PIRNIE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the March 19, 1959, edition of the Rome Daily Sentinel.

This editorial expresses succinctly and forcefully a deep concern regarding the high cost of governmental storage of our mounting farm surpluses:

CROP SURPLUS: PATHETIC, FANTASTIC

"Fantastic," Secretary of Agriculture Ezra T. Benson himself calls the Government program of buying and storing crop surpluses. Uncle Sam will hold by July 1, outright or through loans, over $9 billion worth of farm products. Of the total $3.2 billion represents wheat, $2.4 billion corn, $1.2 billion cotton.

The Government wheat would supply all the Nation's consumption, export and carryover needs for a whole year if not a single new bushel were harvested. Storage alone on all Government crop holdings is costing close to $1 billion a year.

In every way he can devise Secretary Benson tries to dispose of the hoards: Donations to school lunch programs, institutions, persons on relief rolls, relief programs at home and abroad—barter and sales deals with other countries—barter with U.S. firms providing foreign strategic materials—domestic sales that won't depress market prices.

Yet the surpluses grow and grow and grow. The chief reason is that our agriculture becomes more productive all the time. For only two examples: Cotton yield per acre is 10 times that of 30 years ago, the average cow produces one-fourth more milk than 10 years ago. And a well-off family doesn't consume twice as much milk, or steak, or bread if its income has doubled.

It's all pathetic as well as fantastic. There's pathos in the underfed peoples of the world needing the U.S. surplus food, and more, if only it could be got to them feasibly. And there's pathos in realizing that if even all our own people had adequate incomes, we'd probably consume 10 percent or so more food right at home. But long-range factors don't solve an immediate crisis.

## Favors Consigning Uncle Sam to Rubbish Heap

EXTENSION OF REMARKS
OF
### HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. BOSCH. Mr. Speaker, I view with alarm the ever-increasing work of those who would destroy our traditions, patriotic symbols, and love of the principles on which this Nation was founded. Uncle Sam is familiar to every citizen of the United States, and I am sure that his symbolism is recognized throughout the world. I can no more visualize any other symbol for the United States than I can a flag of the United States without a red and white stripes and the stars upon a blue field.

A recent article entitled "Let's Disown Uncle Sam" appeared in the magazine section of the March 1, 1959, edition of the New York Times, and to say that I was astounded is to put it mildly. Under leave to extend my remarks, I include a letter which appeared in the March 7, 1959, edition of the Tablet answering the aforementioned article. I commend this letter to the attention of by colleagues:

FAVORS CONSIGNING UNCLE SAM TO RUBBISH HEAP

DEAR SIR: True to the reputation which the New York Times has acquired in many circles, the paper printed an article in the magazine section of March 1, 1959, which should add considerable to this reputation. It is entitled "Let's Disown Uncle Sam," by Allan Nevins, a former professor of American history at Columbia College.

A shocking article with this slant would have been taboo in most any reputable publication in the country not too many years ago. In it, Uncle Sam is attacked and torn into shreds. Since Uncle Sam is, in a way, symbolic of our country and our past traditions, and in an endearing way has stood for our "American way of life," a phrase we seldom hear today, he has represented, figuratively speaking, practically what our flag has symbolized.

Here are some of the attacks on Uncle Sam: "He encourages loose thinking the world can no longer afford." We pause here to ask, Is the "loose thinking" done by Uncle Sam, or by those who try, through such articles as this, to undermine our American traditions? Now other quotes are, "It is time the most complicated Nation on earth disowned this crude stereotype * * * he is totally archaic * * * he is altogether too much the rural Yankee * * * he is obviously the same breed as the men who marched on Concord." As to the last quote, we ask what the author means by "breed" in this reference? "The men who marched on Concord" were the valiant men who won our American independence during the Revolutionary War. Is that a breed to belittle and disown? I'm afraid the author may be challenged on that one, by a large segment of our American people.

The article further states, "He is out of date because his world has gone." Does he infer that our American Republic is gone, or should be finished? What other interpretation could one give? "He" (Uncle Sam), the author says, "seems to carry too much Yankee cuteness * * * too much rural limitations, too much marked air of manifest destiny jingoism." Then after continuing about Uncle Sam being outdated, gone, past, archaic, he complains that he does not represent the southern gentlemen of the old school, and thereby contradicts his own objection. It is evident Nevins has no love for the Yankee.

Nevins then says Uncle Sam does not suggest the cosmopolitanism and internationalism that marks the American outlook today. So it seems, we must scrap our beloved Uncle Sam, like so many other traditions, and adopt an international symbol because Mr. Nevins says so. The answer he says is obvious, and then adds that when a nation wishes to distill its finest attributes into an emblem, it selects a female figure. It could be interesting to learn what the author's concept would be, if a female figure such as he might suggest, should replace Uncle Sam and also represent internationalism. For early in his article, Nevins refers to Uncle Sam as a "libelous caricature" out of date in an era of television, airplanes, and United Nations. Must we then disown Uncle Sam and adopt a symbol of the United Nations?

Mr. Nevins states that "American democracy has long been an object of suspicion in Europe," yet our forefathers established a Republic here, and any such thing as suspicion, is a product of the human mind. Suspicions or malicious distortions to which he refers, are bound to be rampant as long as there are people in the world to create them. But a falsity, a suspicion, or malicious distortion, never alters the truth one iota. Any such distortions concerning Uncle Sam are conceived in the minds of people, and do not in the least change the true ideas of Uncle Sam. They are but the product of the person who expresses them.

"When stereotyped thinking and cheap prejudices are cast on the rubbish heap, the belief that an infantile folk image like Uncle Sam has any meaning, will follow," Mr. Nevins says. To sum up, this diatribe seems to advocate casting on the rubbish heap American traditions symbolized by Uncle Sam. He refers to his garish and flamboyant garb of striped trousers and star-decked vest. Are the Stars and Stripes depicted in Uncle Sam's garb so distasteful to Mr. Nevins? If so what about those in our flag of red, white, and blue? And why should he have had any interest in helping write a booklet, "The Untold Story of Our Flag?" Mr. Nevins is also one of the editors of the expensive magazine, American Heritage. What kind of heritage does he represent judging from this article?

I prefer the kind of heritage expressed in a writing by Elias Lieberman who said, "I am an American. My father belongs to the Sons of the Revolution; my mother to the Colonial Dames. One of my ancestors pitched tea overboard in Boston Harbor; another hungered with Washington at Valley Forge. Every drop of blood in me holds a heritage of patriotism. I am proud of my past. I am an American. 'See,' my father said, pointing to the flag that fluttered there, 'that flag of Stars and Stripes is yours; it is the emblem of the promised land'."

Our Uncle Sam shares with our flag in all this, and to Americans, like millions today, he still is and always will be the same Uncle Sam, regardless of propaganda to the contrary.

HELEN P. LASELL,
*Chairman of the U.S. Flag Committee.*
JACKSON HEIGHTS.

## Great Potential in Northwest Navigable Waterways

EXTENSION OF REMARKS
OF
### HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mrs. MAY. Mr. Speaker, recent hearings of the Corps of Engineers review of the 308 report have brought forth overwhelming support, but also some statements of opposition to navigation recommendations of the report. Because I believe this opposition has based its arguments on some faulty reasoning, I would like to call the attention of my colleagues in Congress to an excellent analysis of the situation which was written by Mr. Herbert G. West, executive vice president of the Inland Empire Waterways Association of Walla Walla, Wash. Mr. West has devoted many years of service to the development of our waterways in the Pacific Northwest. The following article appeared in the Log, a publication of the association:

INLAND EMPIRE WATERWAYS ASSOCIATION
(By Herbert G. West)

For the past several years, the tempo on revision of transportation laws and criteria has stepped up gradually to the point that in 1957 congressional hearings were held and even more extensive hearings were held by the Surface Transportation Subcommittee of the Committee on Interstate and Foreign Commerce of the U.S. Senate in 1958.

A great deal of information has come over my desk regarding waterway transportation, rail and truck. Many times, in the past, I have been rather confused in an attempt to digest logically the arguments that have been presented on all sides. I thought if I were confused that, possibly, some of the members of the Waterways Association would, likewise, be confused. Therefore, this is an attempt to bring about some clarity to the situation as it affects our Columbia-Snake River Water Resources Development program.

The Dalles-Celilo Canal was completed and put into operation in 1915, and I quote from the official program as follows: "Removing the last barrier to free navigation of the Columbia River and its tributaries from the Pacific Ocean, 500 miles inland, will be formally opened during the week of May 3–8, 1915, in a series of celebrations from Lewiston, Idaho, to Astoria, Oreg."

At the time of the completion of the Dalles-Celilo Canal, we had relatively few ports—in fact, only four from the mouth of the Columbia River to Kennewick, Wash.; namely, the Port of Portland organized in 1891; Astoria, Oreg., 1910; Vancouver, Wash., 1912; and Kennewick, Wash., 1915 (undoubtedly the result of the enthusiasm created by the Dalles-Celilo Canal).

The record discloses that during the first year after completion of the Celilo Canal, some 4,000 tons of cargo passed through the canal; and, in the next 17 years of operation, approximately 1,100 tons passed through the canal. In other words, what appeared to be a golden future for water transportation from the mouth of the Columbia River to Lewiston, Idaho, in 1915, did not materialize—due mainly to the fact of disastrous rate wars with land transportation facilities. However, in 1933, when talk of the building of

the Bonneville Dam got underway, tonnage started to come up and total tonnage for the 2 years 1933 and 1934 was approximately 39,000 tons and then dwindled down again to 4,000 tons in 1935. Again, most of this tonnage originated right on the Celilo Canal itself. This is the record of disastrous rate wars on the Columbia River.

River transportation has been threatened many times by the advent of disastrous rate wars and attempts at abortive legislation. Nevertheless, each year has seen a substantial increase in tonnage and an increase in the formation of port districts. Until January 1, 1958, there were 22 port districts in Washington and in Oregon from the mouth of the Columbia River to the confluence of the Columbia and Snake rivers at Walla Walla, Pasco, and Kennewick, Wash. With the creation of these port districts, we saw inland waterway transportation on the Columbia River somewhat stabilized for we then had 22 municipal corporations in Oregon and Washington charged with and dedicated to the development of industry and commerce and the construction of public port facilities for the interchange of cargo.

Only five port districts had been in operation prior to the opening of Bonneville Lock and Dam in January of 1938. However, in the year 1958, with 10 port districts located above Bonneville Dam, a total tonnage of 1,750,528 tons was locked through the dam. That period from 1938 to 1958 represented a fabulous 20 years for the Pacific Northwest. Industries started to grow on the banks of the Columbia River through the deepsea tidal area and upstream on the inland waterways of the interior. More tonnage was being carried by northwest railroads—more tonnage carried by our trucklines.

There are now 36 port districts—one organized under Washington State law by special election in May of 1958—and the remainder, in the States of Oregon, Washington, and Idaho, formed in the November elections.

The assessed valuation of the property within the 36 port districts, reaching from the mouth of the Columbia River to the foot of Chief Joseph Dam on the Columbia (approximately 545 miles from the mouth of the Columbia River) and on the Snake River to Lime Point, Idaho (approximately 491 miles from the mouth of the Columbia River) approximates $1,750 million. It is estimated by reliable economists that an investment approximating one-half billion dollars is located on, or near to, the banks of the Columbia and Snake rivers above the tidal area.

The firms investing in this reach of the Pacific Northwest are doing so primarily because of the incentive of low-cost water transportation and are representative of national and international companies, not newly-formed stock companies, but representatives of the blue chips of American industry. Just a few years ago, Pacific Northwest headlines heralded the fact that the aluminum industry was locating in the area—primarily because of low-cost power. I have just read a very interesting article by Prof. Joseph R. Hartley, presented to the annual meeting of the Ohio Valley Improvement Association on October 16, 1958. Professor Hartley had just completed an objective report on the benefits of water transportation, "How Widespread Are These Benefits?" It is most interesting—very factual. Professor Hartley, through his paper, passed on a few words regarding aluminum and I would like to quote, "Aluminum is a newcomer to the Ohio Valley. The story of its arrival is simple: it needed cheap power. In the past 3 years three major smelters have been started under construction along the Ohio, which previously had no aluminum reduction capacity. Kaiser Aluminum's plant at Ravenswood, W. Va., and Olin Mathieson's plant at Clarington, Ohio, are both operating. Alcoa's plant near Evansville, Ind., is in an advanced state of construction. When the three smelters reach full capacity, they will be producing one-fourth of the country's aluminum."

The story repeats itself over and over. Improvement of inland waterways and investment of industrial dollars—mean payrolls, more taxes, employment, and benefits to the Nation, both during peacetime and for national defense and security.

Low-cost water transportation is threatened—not by economics—not by the great technological revolution that we have experienced in the past 20 years. Rather, it is threatened by boring from within the legislative halls of the State legislatures and of the Congress of the United States. The American Association of Railroads has announced a six-point program, two points of which are, (1) "Impose user charges on publicly provided transportation facilities, such as waterways, highways and airways" and (2) "Permit railroads to carry more agricultural commodity exemption from rate regulation or extending the exemption to rail carriers." A third threat is the continued proposal to make changes in the ratemaking relationship between modes of transportation.

Every student of transportation and of history knows that in the interest of national peacetime prosperity and national security all forms of transportation have been subsidized—from the early wagonroads, canals, river improvements, railroads, highways, and airways.

These railroad land grants were first issued in the United States in 1850 and ended in 1871. During this period, a total of almost 153 million acres was granted in the United States. This is equal to an area slightly less than the size of Texas and only slightly less than the total square-mile area of Oregon, Washington, and Idaho combined. It is significant to note that among other reasons these three held a very prominent place in the discussion.

1. The acceleration of the settlement of the country and the development of its natural resources.

2. The enhancement in value of adjacent Government and private land, and the increase of taxable wealth generally.

3. The strengthening of the national defense.

Certainly, no one will argue against the reasons for, or the value received from these railroad land grants. However, I do believe that the grants—not necessarily in land, but in dollars to aid in the development of water transportation, truck transportation and airways are for the same direct purpose—for the advancement of our national defense, the development of our natural resources and the increase of taxable wealth, generally. The basic economic and geographic structure of America was developed with reference to water transportation. The country's historical dependence upon its navigable waters is reflected by the concentration of large cities and communities along the waterways today.

The policy that "Navigable waterways * * * shall be common highways and forever free * * * to citizens of the United States * * * without any tax, impost or duty therefor" was established by compact between the original States and the people and the States. It was adopted along with the guarantees of religious freedom, trial by jury and habeas corpus of 1787.

President Hoover made this comment in an address at Louisville, Ky., on October 29, 1929, on completion of the Ohio River project: "And the new waterways are not competitive, but complementary, to our great and efficient railways. It is the history of transportation that an increase of facilities and a cheapening of transportation increases the volume of traffic."

We all have heard considerable regarding so-called geographic price discrimination. That means in very few words the fact that the railroads are able, in the noncompetitive territory not reached by water transportation either directly or by joint rates, to increase their rates and make up for their losses sustained in a competitive area of water transportation. Naturally, the one having the greatest backlog of noncompetitive traffic is the one which generally wins out. It might take months, sometimes years, but history has repeated itself time and time again.

It is my desire in writing this bulletin to try to be constructive. We are all working for the same purpose, a more prosperous America, a freer America, free from within, as well as from without.

I would suggest that all of you who have not read the hearings before the Surface Transportation Subcommittee of the Committee on Interstate and Foreign Commerce of the U.S. Senate, under date of March 1958, get copies from your Senator or Congressman for it would be very worthwhile reading.

I have read and reread many times the statement of Mr. C. E. Childe, transportation consultant for the Inland Waterways Common Carrier Association, testifying before Senator SMATHERS on March 17, 1958. I should like to quote just a little bit from Mr. Childe's statement: "We now have studies conducted by the Interstate Commerce Commission's Cost Fnding Section, comparing rates and revenues with costs, by regions and for the United States as a whole, which throw new light on the problem. Looking merely at the averages, 75 of the commodity classes, 66 percent of the tons, and 49 percent of the total ton-miles, are carried at a loss. To this should be added the less-carload traffic, which is not shown on the chart, but on which the Interstate Commerce Commission's figures show a loss of approximately $100 million a year. Obviously, it is possible for the railroads to carry such a large percentage of their traffic at a loss only because the remaining traffic * * * pay higher rates than would be necessary if it were not for the losses incurred on the commodities below the costline."

On the question of out-of-pocket cost, this rate is not supposed to return any profit to the railroads, neither is it supposed to be carried for less than actual cost. The items run: explosives, 551 percent ratio to out-of-pocket cost; wheat, 223 percent; oranges and grapefruit, 103 percent; cattle and calves, 90 percent; from anthracite to washers 19 percent of out-of-pocket costs.

These reports can be secured from the ICC, "Statement 5–57, Distribution of Rail Revenue Contribution by Commodity Groups, 1955."

In the days ahead, when you hear so much and read so much about tolls and user charges, and about destroying the national transportation policy which now provides for the ICC "to protect the inherent advantage of each form of transportation," I hope that possibly we may have contributed something to your thinking. I cannot resist the temptation to make a constructive comment—meant in all sincerity The railroad rate structure, in my opinion, is the major reason for inadequate railroad earnings. Study the railroad pricing system looking merely at the averages; 75 of the commodity classes, 66 percent of the tons, 49 percent of the total ton-miles, are carried at a loss. No other important industry in the country, to my knowledge, does business or attempts to do business with such disregard to cost.

Support strongly opposition to destruction of low-cost water transportation and the elimination of the trucking industry which notably provides speed and flexibility of service.

Always remember, any government that is big enough to give you everything you want is big enough to take everything you have got.

## Free Enterprise

EXTENSION OF REMARKS
OF
## HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I commend to the House's attention a provocative speech made by Miss Kay Jackson, an 11th grade student at Crosby High School, Crosby, Miss. Miss Jackson's address was delivered before the Crosby Rotary Club on March 12. The speech follows:

FREE ENTERPRISE

(As presented in speech by Miss Kay Jackson, junior, Crosby High School, before Crosby Rotary Club, March 12, 1959)

Since I was asked to choose my own subject for my talk today I have thought of several but the one I wish to talk on interests me greatly as I'm sure it does all freedom loving Americans. This is the advantages of the American free enterprise system. To me this system covers every field of free enterprise and especially do I think of the medical profession when I think of it—of the many advantages of private medical care. There has been and still is an effort to create public sentiment in support of a Government controlled medical program. A very distorted picture of the health and medical situation in this country has been drawn. It is true that there are problems to be solved but these problems make greater progress each year in being taken care of. To lose perspective is to lose pudgment. Many critics indicate that increased medical costs are proving financially disastrous to families faced with illness or accident. It is true that medical costs, like all other costs have risen in the last few years. The American Medical Association realizes this. They have advocated and strongly promoted the sale of voluntary health insurance as one of the aids to cushion the economic shock of illness. The great majority of American people do want to pay their own way and a certain amount of medical care is an expectable item on any family budget. Services of a doctor to those that were unable to pay has been vigorously promoted by the medical association. Great Britain and France have socialized medicine. In neither country has it come up to expectations. Neither have what we would consider adequate standards of medical and hospital care. Popular opinion of both countries favored government control of health insurance. As a result there has been a broad trend toward a nonfree enterprise system of much more than the health field. We in American couldn't want the Government to control our doctors and hospitals. This would be a grand way to drag our medical profession down to a low level of mediocrity.

There is really no such thing as free medical care or any other free benefits from the Government. Somebody pays for it. Under Government management the medical profession would be greatly impaired. Look at what has happened to the once rugged and independent farmer. He was the backbone of our Nation. The Government's planned economy has almost made a puppet out of him. Today the farmer plants whatever crops the Government decides upon. They market their products in a manner carefully prescribed and rigidly administered by the Government. They have surrendered much of their freedom. The same thing could happen to our medical profession. The Government is also getting more and more control over employment and wages. Our Constitution does not say that the Federal Government acting in the capacity of an economic manner shall promote the welfare of one person at the expense of another. The Government has no right in times of peace to take the fruits of one person's labor and give it to another. The Federal Government cannot make people rich. But it can make the rich poor by taxing away their substance and by stifling their incentive to work and to save. The only thing the Government can distribute evenly is poverty and enslavement. The real destroyer of the liberties of the people is he who spreads among them bounties, donations, and benefits. By their voice and their vote the people of America should insist that our Federal Government cease distribution of bounties, donations, and benefits. There has been no real opposition to the numerous projects the Government promotes—these projects eat up millions in taxpayer's money—worse still it's a giant step in taking away more and more of our freedom. It's time we as a people ask ourselves are we turning our backs upon our system of free, competitive enterprise. Some may deny that we are but our actions belie our words. Under our free competitive enterprise system we have amassed the greatest productive power the world has ever known. No planned economy could do this.

Many of our Founding Fathers fled their native countries to escape the serfdom which such planning imposed. For several years more and more people are becoming alarmed at the tendency of the Government to impose restrictions on business. We don't argue the fact that government has its place in our democracy. We need it for our protection but business should be free to control its own activities except when they violate the rights of others. Many fear that that Government misuse of controls will destroy our free enterprise entirely. Free enterprise provides more benefits for more people than any other system devised by man. It raises the standard of living. It makes no difference whether one believes in free enterprise or not; it works. An excellent example to prove this is the German miracle. In 1948 West Germany had to make an economic choice. They chose the free enterprise economy, and as a result have risen from the rubble of World War II to economic and financial preeminence in Western Europe. Then take a look at what has happened to Great Britain in this time. They do not seem to be able to shake themselves loose from the tentacles of socialism fastened upon their economy under Labor government. Is there moral in this? Yest. Nations which abandon free enterprise are doomed to decline. Nations which adopt it are bound to ascend.

Let us all remember that at the feet of the Statue of Liberty lies a broken chain that is seldom seen, but this broken chain is a symbol of the bonds which chained a people struggling for freedom. The torch of this statue burns bright; shedding light upon the world, proclaiming freedom for the great democracy of America and all the people that want freedom. Here people can live and make their living under the free enterprise system—that is, if they don't allow the Government too much control and remember there is no such thing as "Federal funds." That term is a wolf dressed up in sheep's clothing and it deceives a lot of people into feeling that whatever we get from the Government is free. It is time for all freedom-loving Americans to realize there is no primrose path to easy money or to a more abundant life. Let's safeguard and treasure our free enterprise system, for it is the backbone of our great Nation. Eternal vigilance is the price of free enterprise. Then let's not let the Government take the first great step in destroying it by forcing upon us socialized medicine. If we do, soon we will have lost the freedom that millions of Americans have fought and died for.

## Domestic Enemy No. 1

EXTENSION OF REMARKS
OF
## HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. LIPSCOMB. Mr. Speaker, inflation ranks high among the more serious and pressing problems confronting the Nation today, for, unchecked, it could bring ruin to the people and the Nation.

Under leave to extend my remarks, I submit for inclusion in the RECORD an editorial appearing in the March 23, 1959, Los Angeles Times, written by Mr. Norman Chandler, publisher of the Times, which contains a thoughtful and timely discussion of this problem.

Among the high points of the editorial are the recommendations given for moves to take, and those not to take, to place a checkrein on the forces of inflation. The time for action is now, and I believe Mr. Chandler's recommendations should receive serious consideration:

DOMESTIC ENEMY NO. 1

(By Norman Chandler)

Sometimes a transaction right here in Los Angeles tells us more about a national or international problem than all the spilled ink and oratory of Washington.

I am thinking about the contract our board of water and power commissioners recently awarded to the Brown Boveri Corp. of Switzerland for two turbine generators for the Haynes steam power plant near Long Beach.

QUESTIONS OF SECURITY

This contract and another for similar heavy machinery, made by the Tennessee Valley Authority with a British company, have caused the Office of Civil and Defense Mobilization in Washington to order an investigation. Some people say the national security is involved when such machinery is purchased from foreign companies.

When the power commissioners contracted with the Swiss company the lowest American bid was more than half again as high. The Swiss got the business for $9,260,800.

The lowest American bid contained an escalation clause—and this is very significant to what I am writing about. This clause provided that the bidding price on the first turbine generator could be increased by 30 percent before delivery and the second by 40 percent. For an American company this escalation clause was a necessary hedge against inflation of the costs of materials and labor between 1959 and 1963, when the second unit would be delivered.

The Swiss bid contained no escalation clause and neither did three British bids. But all three American bids did.

It seems plain to me that American manufacturers of heavy electrical equipment—a very important area of production—are being priced out of their own market, and the world market, too, by factors beyond their control.

IN CASE OF WAR

The chief argument against accepting foreign bids on heavy generating equipment is security, and that is why the OCDM is going to look into the matter. The American companies say that in case of war or other serious international difficulties spare parts for the machines which produce a critical amount of our electric power would not be quickly available if the parts had to be made abroad.

The Los Angeles Haynes plant eventually will produce 16 percent of our power. If that were cut out for a considerable length of time, the loss might be crippling.

But I think all Americans can find a greater cause for concern than the security argument important as that may be. Let me get back to that question of pricing ourselves out of markets here and everywhere.

In some lines we have been able to compete in the world because of our mass production techniques and the labor-saving devices which continually increase output per man in the labor force. We can make some things so fast and so well that, in spite of high wages and expensive materials, we can satisfy domestic customers and sell surpluses abroad.

But not everything can be made on a production line. In heavy industry, of which electric power equipment is our example, many items are custom built. When a piece of equipment is engineered and manufactured to special requirements, the labor-saving devices of, say, the automobile industry cannot be applied.

In such heavy industry the manufacturers feel the pinch of the American wage differential and the higher prices of materials. Average hourly earnings in the United States range from 2½ to 5 times those of Europe. Moreover, American wages continue to rise, as witness that 30 to 40 percent escalation clause in the low American bid on the Los Angeles equipment.

Now, certainly nobody in his right mind would propose that American wages be cut to European levels to put our heavy industry back into domestic or world competition.

And nobody who thinks about our delicate position in the world and our expensive nursing of industrial development in the backward countries would like to see our Government embargo foreign manufactures just so our inflation whirl can continue up and up.

THE SUBSIDY PROPOSAL

Some of the more advanced free traders have proposed that we subsidize our own manufacturers so they can compete, but the thought should give the horrors to anybody who has watched our farm price-support programs through a generation.

Some of our manufacturers are building plants abroad to take advantage of lower costs, but that is no solution for this country. What would happen to hundreds of thousands of American workmen if the heavy electric industry, just to name one, took flight to Europe and Japan?

I don't think there is any simple or quick solution of this very serious problem, but I do think something can be done which will improve our position slowly.

When firefighters cannot put out a forest blaze they build a backfire to check the advance. It seems to me the best we can do now is build a backfire against inflation.

Government can help by living within its means, because its manipulation of interest rates and its borrowing are the beginning, or the trigger mechanism, of inflation.

But Government fiscal policy is not the only cause of inflation. There is something called the wage-price spiral.

Productivity of the American working force increases at a historical rate of 2.3 percent a year but wages have been increasing in recent years at about double that rate.

BALANCING THE INCREASES

There is the key. We do not have to abolish wage increases; we have only to get the increases in a just balance with the increase of productivity.

I'm sure Vice President NIXON is thinking very hard on this subject. He is spokesman for the Cabinet committee against inflation, and neither he nor the committee can overlook the things I have been talking about here. If we want to stop inflation, what else is there to talk about?

## Huntington Park Daily Newspaper Editorial Says "A Firm Stand Well Taken" by President Ike

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present for the reading of yourself and all the other Members of this distinguished legislative body an editorial in the Daily Signal, a newspaper serving the greater southeast communities in Los Angeles County, Calif., and including the great 23d Congressional District which I represent in this my 13th year. I know you will agree with me that same is very timely and very pertinent, as well as a very valuable brief comment upon a subject about which all of us are prayerfully concerned:

A FIRM STAND WELL TAKEN

Men who cherish freedom in every corner of the globe cannot but rejoice today in the firm and positive stand taken by President Eisenhower last night in his speech to the Nation on the Berlin crisis.

The President, while he left the door open for reasonable negotiation, made it equally clear that this country is fast in its determination to stand and fight, if necessary, to preserve our pledge to the free people of West Berlin.

"We have no intention," the President said, "of forgetting our rights or of deserting a free people. Soviet rulers should remember that freemen have, before this, died for so-called scraps of paper which represented duty and honor and freedom."

ONLY POSSIBLE STAND

The President's stand on the Berlin crisis is, of course, the only stand this Nation with conscience can take. It is the same stand we had to take in Korea 9 years ago and it is the same position we should have held with firmness in our dealings with the Soviet Union throughout.

Basic Soviet gains, it must be remembered, have been made when the free world weakened and failed to resist. When the bluff has been called the Soviet strategy has been to withdraw and await an easier time.

SOME GRAVE DOUBTS

And while all freemen must rejoice in the stand Mr. Eisenhower has taken on Berlin, grave doubts, despite his assuring words last night, have been raised as to this country's ability to make our position stick.

By the President's own admission a very few days ago the United States is in no position successfully to wage a ground war in Europe. And in his speech last night he made it graphically clear our basic defense is based on our retaliatory power with nuclear bombs and missiles.

The question is yet unanswered by the administration is what this country's response is to be should the Soviet Union decide, as certainly is most likely, to attack in Europe on the ground. Will the United States then wage an all out retaliatory nuclear war? Or will we rely on our admittedly inadequate ground forces and those of our allies to wage what we already concede will be a losing war?

## Farewell, Murderer

EXTENSION OF REMARKS
OF
### HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 26, 1959*

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I wish to include the editorial by David Lawrence of the U.S. News & World Report, entitled "Farewell, Murderer."

FAREWELL, MURDERER

(By David Lawrence)

Anastas Mikoyan was not officially invited to visit the United States. He obtained a visa for the purpose of visiting the Soviet Embassy in Washington.

But, for all practical purposes, the journey was a carefully planned maneuver by the Soviet Government adroitly designed to test out whether the American people, by their overwhelming vote against the Republican Party in the last congressional election, had in fact repudiated the leadership of President Eisenhower in world affairs. If so, then, by driving a wedge between the American people and their Government, the Soviets hoped to pursue their campaign to oust allied forces from West Berlin and gain another victory in the cold war.

A Democratic Senator assured the Soviet Deputy Premier that there is unity in Congress on world policy.

Mikoyan was feted by some businessmen and some labor leaders. He was, on the whole, treated courteously by the people. He was given lengthy audiences by the President and the Secretary of State. The American press gave him headlines and plenty of space, as did television and radio.

But, while our Government officials were scrupulously polite because they had to be, it is a matter of considerable puzzlement that the American press fell down so badly in exposing Mikoyan. Only here and there did editorials appear referring to the record which shows his hands dripping with the blood of Hungarian patriots.

Basil Brewer, publisher of the New Bedford, Mass., Standard-Times, felt so badly about the lack of attention to the facts that he bought advertising space in several newspapers in the East to reprint his editorial entitled "This Monster, Mikoyan." The editorial said in part:

"Deputy Premier Mikoyan was sent to Budapest to take charge for Moscow, when the freedom fighters deposed the puppet regime and set up a new government under Premier Imre Nagy.

"On October 31, 1956, Mikoyan personally assured Zoltan Tildy, minister of state of the new Hungarian government, that Soviet troops would be withdrawn from Hungary. This welcome news was announced over the Budapest radio by General Maleter, defense minister in the new Hungarian government,

and reported from free-world news correspondents on the scene.

"Even as Mikoyan gave his pledge, however, he was calling for Soviet troop reinforcements to mass outside Hungary, in preparation for the attack of November 3–4.

"Having put the Hungarian leadership off guard, Mikoyan arranged a series of conferences between Soviet and Hungarian military leaders, 'to plan the withdrawal.' After several sessions, an emergency parley was arranged for 10 p.m., November 3, at Soviet military headquarters outside Budapest.

"Once inside the conference room, General Maleter and his aides were arrested, and immediately, the signal was given for a massive Soviet tank and infantry attack on Budapest. While Premier Nagy, unaware of the trap, implored over the radio for General Maleter to return to his post, the Soviet forces moved in for the kill.

"A few days later with Mikoyan still in full charge for Moscow, Nagy himself was tricked into leaving asylum in the Yugoslav embassy and taken prisoner.

"Mikoyan's vital role in this bloody chapter of history has not been as widely reported as it should have been. The Soviet Government has never mentioned it, and witnesses who would have testified to it have gone—by death in the fighting, by deportation and by execution. The voices of General Maleter and Premier Nagy were silenced by firing squad. As is his custom, Mikoyan tried to leave no trace.

"It is an insult to the American people for this archmurdered Mikoyan to pretend to be a good-will ambassador to the United States. Only disaster can come from American businessmen and officials fawning over this Machiavellian monster."

Our State Department has confirmed the facts related above.

The Soviet Deputy Premier surely didn't convert many American businessmen. Most of them attended the social functions out of curiosity.

Why, however, was Mikoyan given the red carpet treatment by any private organizations or persons? Why were the few pickets and demonstrators who did appear reprimanded in our press?

Can it be that we haven't enough proof yet of the perfidy of the Communist regime? President Eisenhower did not hesitate to say in his message to Congress just after Mikoyan arrived:

"We have learned the bitter lesson that international agreements, historically considered by us as sacred, are regarded in Communist doctrine and in practice to be mere scraps of paper."

That's why we cannot trust the Soviet regime. That's why we must remain armed to the teeth.

Recalling the tragedy in Hungary, we say to our departed guest Mikoyan: "Farewell, murdered."

## Graduate Fellowship Needed

EXTENSION OF REMARKS
OF
### HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks, I wish to include a telegram from the Honorable Franklin D. Murphy, chancellor of the University of Kansas, in which he clearly and unmistakenly indicates the vital need for the restoration of funds for the graduate fellowship program as provided for in the National Defense Education Act:

LAWRENCE, KANS., *March 23, 1959.*
Representative NEWELL GEORGE,
*House of Representatives,*
*Washington, D.C.*

Have just learned of action of Appropriations Committee in eliminating graduate fellowship program for National Defense Education Act for fiscal 1959. Such action if sustained by Congress would be unbelievably shortsighted and would represent real violence to both short- and long-range developments of scientific and educational resources in this country. The only gainers by such action would be the Communist countries. How complacent can we get? Urgently urge House reversal of committee action.

FRANKLIN D. MURPHY,
*Chancellor, University of Kansas.*

## Federal Tax on Telephone Service—Resolution To Repeal by the Mississippi Public Utilities Commission

EXTENSION OF REMARKS
OF
### HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. WILLIAMS. Mr. Speaker, on yesterday I introduced a bill to repeal the Federal excise tax on telephone service.

This tax was originally imposed for purposes other than the raising of revenue, in a time of emergency when it was necessary to discourage the use of telephone for purposes not related to the war effort. It is my belief that continued imposition of this wartime tax as a revenue measure is, in a sense and to some degree, a dishonest act on our part. If this revenue is needed, and the original purpose of the tax is no longer existent, it should be repealed and subsequently reenacted as a revenue producing measure.

Under leave to extend my remarks in the RECORD I include a resolution on this subject recently adopted by the Mississippi Public Service Commission. The resolution follows:

RESOLUTION

Whereas the Congress of the United States during World War II levied the Federal excise tax on local telephone service and greatly increased the tax rates on other communication services as a temporary, wartime emergency measure to raise money for the war effort and to discourage unnecessary use of services and materials in critical supply; and

Whereas the national emergency created by those hostilities ended more than 13 years ago and the original purposes of the tax have long since disappeared, and there exists no other emergency to justify the continuation of this tax; and

Whereas while historically a Federal excise tax on communication services has never been imposed on the American public except in times of emergency, this tax is still imposed upon and collected from the communications users of this country; and

Whereas in 1958, the Federal excise tax on telephone services took more than $4 million from the pockets of telephone customers in Mississippi alone or approximately $14.50 per telephone; and

Whereas Congress has removed the excise tax on electricity, and since gas and water services have never been so taxed, telephone service is the only household utility service that is subject to a Federal excise tax; and

Whereas the Federal excise tax on communication service is unjustified, unfair, discriminatory, and contrary to the best interests of the communications users of the State of Mississippi and of this Nation, and should be repealed; and

Whereas there are now pending in the Congress of the United States certain bills which would effect the repeal of the Federal excise tax on communication services: Now, therefore, be it

*Resolved*, That the Mississippi Public Service Commission does hereby petition and respectfully urge that the Congress of the United States repeal the Federal excise tax on communications services; and be it further

*Resolved*, That a copy of this resolution be sent to the chairman of the Ways and Means Committee of the U.S. House of Representatives, to the chairman of the Finance Committee of the U.S. Senate, and to each member of the Mississippi delegation in Congress.

This resolution was unanimously adopted by the Mississippi Public Service Commission on this 17th day of March 1959.

NORMAN A. JOHNSON, Jr.,
*Chairman.*
W. E. MOORE,
*Commissioner.*
THOMAS HAL PHILLIPS,
*Commissioner.*
O. B. MARSHALL,
*Secretary.*

## Political Danger

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, the basic flaws of reasoning behind the fair trade bill, which would permit manufacturers to go around antitrust and set retail prices, will come to light sooner or later. Sometimes the obvious is difficult to see.

Imagine asking that antitrust price conspiracy laws, originated to protect businessmen and consumers alike, be set aside. Imagine, trying to eliminate the need for women shopping around. Imagine, eliminating competition in a free enterprise market system.

Fair trade is a contradiction, is self-defeating and will hurt most those it is designed to help. One has but to study the bill and understand marketing and merchandising to see this.

When the fatal flaws are clearly seen, the consumers will not be forgiving of these Federal representatives who put this law on the books. It is not unlikely that even those manufacturers and retailers who thought they wanted fair trade price fixing will turn against those legislators who accepted their earlier advice and passed this law.

## The Constitution: Rights and Duties

EXTENSION OF REMARKS
OF

## HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. LIBONATI. Mr. Speaker, the American Legion, Department of Illinois, has recently through its official oratorical judicial staff, under the auspices of the Americanism committee, made its selection of the 1959 oratorical winner's speech entitled, "The Constitution: Rights and Duties."

The American Legion has fostered and promoted many patriotic movements among our youth, such as Girls and Boys States, Poor Boys Camps and welfare and charitable programs, but none are as far reaching as the oratorical and essay contests.

The thousands of youngsters throughout the public and parochial students of the primary and high school grades in Illinois compete for this high honor.

The hours spent in research of patriotic subjects and historical works stimulate patriotic thoughts and knowledge of both our patriotic leaders and their concept of our Constitution in its use and control of our Government.

We thus give our youth an opportunity to study our Government and the intricacies of its constitutional operation. This training is of tremendous value in molding our future citizens for their civic responsibilities in the future.

The State finals of the department of Illinois were held in Springfield, Ill., on Friday, March 13. My friend, Frank Bottigliero, assistant department adjutant, formerly chairman of the State Americanism committee, formerly trained under my deceased brother, Elliodor, chairman of the Americanism committee for many years before his death, who was responsible for many of the American Legion's Americanism programs, sent me the following letter:

THE AMERICAN LEGION,
DEPARTMENT OF ILLINOIS,
*Chicago, Ill., March 23, 1959.*

Hon. Congressman ROLAND V. LIBONATI,
*Old House Building*
*Washington, D.C.*

DEAR LIS: Enclosed herewith please find the 1959 department of Illinois State oratorical winner's speech entitled "The Constitution: Rights and Duties."

The State finals of the Department of Illinois were held in Springfield on Friday, March 13, and Roger Majak, representing the eighth district of the first division, department of Illinois, attending the Thornton Fractional South High School, 18114 Ridgewood Avenue, Lansing, Ill., was judged the State winner and will represent Illinois.

Would you please be kind enough to have the oration printed in the CONGRESSIONAL RECORD.

Sincerely,

FRANK C. BOTTIGLIERO,
*Assistant Department Adjutant.*

[Enclosure.]

THE CONSTITUTION: RIGHTS AND DUTIES

(By Roger Majak, Thornton Fractional South High School, Lansing, Ill.)

Recently, I read an interesting short story which made a great impression upon me. It was taken from an ancient legend and is called "The Country of the Blind." It seems that nestled among the snow-capped peaks of the majestic Andes Mountains of South America, there was a legendary valley completely apart from all the world of men. The valley was a beautiful place; it was situated in such a way that the surrounding mountains protected it from the weather—thus there was perpetual summer. Bright sunlight during the day and silvery stars at night shone down upon this Utopian paradise, the Shangri La of the Andes.

And yet, there was something strangely wrong with the people who lived in that valley—you see, they were totally blind. A strange disease had run its course among the people so that gradually, each generation saw less clearly than the preceding one. After many years the old became groping and uncertain, the young saw but dimly, and the children born to them never saw at all. Finally, their sense of sight was lost forever.

It is a sad tale, isn't it? And yet, I feel that this story is representative of the greatest danger that exists in America today—a danger which could actually destroy the Constitution of the United States and the way of life which that Constitution represents.

This country of ours is, in a way, a utopia. It is the finest civilization ever created by man. It has been described in thousands of ways by many persons far more eloquent than I; and yet they all say the same thing, "America is the greatest land of all." Like the towering Andes mountains there stands the Constitution, protecting and guiding us in the valley of life. But what about the people? In the "Country of the Blind" the people could not see, and thus the beauty of their valley was wasted, for what is beauty without men to see and enjoy it, and to fight, if need be, to preserve it? Here, ladies and gentlemen, lies the danger against which we must guard. We must be always alert lest we become blind to the greatness of the Constitution and the Bill of Rights, lest we become so intent upon gaining our constitutional rights that we become blind to our constitutional duties, lest we become indifferent toward life in America. For the greatness of America, like the beauty of that legendary valley, is wasted without the true appreciation of its citizens; the Constitution, without men to defend and uphold it, is but a useless piece of parchment; and the Bill of Rights, without citizens who accept its challenge and respect its authority, is but a group of meaningless words.

I often wonder as I observe the workings of this Nation, whether its people are actually conscious of what is going on around them. I often wonder if they see the marvelous system of which they are a part. I wonder if they ever stop to think about the things which make America possible.

I have often thought it would be wonderful to be able to call America to a sudden halt; to have the farmers in the field, the secretaries in the offices, the housewives in the kitchens, and the laborers in the factories stop—for a moment; to silence the wheels of industry and the hum of business; to be able suddenly to freeze the entire panorama of life in America. If I could do that I would ask each man to think about the true meaning of the Constitution and its effect upon his life.

I should ask each man to think briefly about the history of the Constitution, for the past is the key to the present. I would ask him to recall the golden age of American government when a group of colonists, working together for a common cause, constructed a system of government from the lessons of their experience and from their shear determination to enjoy the blessings that God had created for them. They devised a method of government which has lasted, relatively unchanged, until today. There were the Thomas Jeffersons, the George Washingtons, Madisons, Monroes, Adams, and countless others whose dedication and energy were limitless, whose wisdom and personal sacrifice have been unequaled to this very day.

And then I would ask the people of America to note the significance of the Constitution today. I would ask them to consider carefully their inalienable rights and duties under the Constitution. It occurs to me that, in respect to rights and duties, the Constitution and the bill of rights are like a pendulum. Have you ever watched the pendulum of a "grandfather clock"? It is a basic law of physics that the pendulum swings an equal distance to each side of the perpendicular. That is, it swings just as far to the left as it does to the right. And so it is with the Constitution. For every constitutional privilege, there is a corresponding duty. So that, just as we have the right to vote, so we have the duty to vote wisely; just as we have the right of free speech, so we have the duty to extend that same right to others; just as we have the right to worship as we please, we have the duty under the Constitution to tolerate the religious choice of others; and just as we accept the protection and services of the Government, so should we respect our duty to pay our just amount of taxes to make those services possible. Yes, I would ask the people of America to examine carefully their patriotic attitudes and their American sense of values. I would have them ask themselves if they are doing their part in upholding the principles and responsibilities of a free society.

And then, I would have them look at the Constitution of the future. Of course, we cannot know what the future of the Constitution might be. But we can plan and resolve; we can hope and dream; we can invest our faith in the future of constitutional government. The Constitution is more than a political document; it is an act of faith—faith in its people to uphold and defend it. And so to all Americans I would suggest that we stop, renew our faith, and invest our energies in the future of the Constitution.

And then the throbbing, bustling, seething life of America in action could resume.

Of course, we cannot make all Americans pause and think. We can only hope that through improved education, through contests such as this one, through the work of patriotic organizations and civic-minded industries, we Americans will come to an unprecedented knowledge, respect, and confidence in our great Constitution. There is a deep underlying sense of patriotism in the heart of every American, but sometimes that patriotism becomes lost in the personal cares of everyday life. Sometimes our constitutional sense of duty becomes passive, and we forget our responsibilities. Sometimes it takes a Kaiser Wilhelm, a Pearl Harbor, or a Russian sputnik to rekindle our patriotic fire and enthusiasm.

But because I feel that basically we Americans are the most patriotic people in all the world, although at times we do not outwardly show it, I am optimistic in the future of the Constitution, as old Ben Franklin was when he made his famous constitutional prophesy.

It was the last session of the Constitutional Convention. Their work completed, the Delegates had gathered for the final time to sign their names to the document which represented the fruit of months of labor and years of personal thoughts, dreams, and ambitions. The new Constitution of the United States was ready for presentation to the public for its approval. But a strange atmosphere of gloom and despair hung in the air of that tiny courtroom in Philadelphia. For, despite the fact that they felt they had done their very best, many of the Delegates believed that their work was doomed to failure. Their only joy seemed to be in the fact that their work was done and they could now return to their homes and families.

As each Delegate came forward to sign his name, the members talked noisily among themselves about the possibilities of success or failure. Finally, it was Ben Franklin's turn to sign. As he approached the table his eyes fell upon the high-backed chair in which President Washintgon was seated. And there he saw, carved in the back of the chair, a familiar sight to him. It was a half-sun peeping over the horizon. A broad smile suddenly lightened the face of the eldest Member of the Convention, and, having signed his name, he turned and faced his colleagues. Immediately there was a hushed silence and all eyes were turned upon the little man with the fragile bifocals who had so often been the inspirational peacemaker for the group during their long hours of spirited debate. Slowly he turned and pointed at the emblem carved in the oak chair, and he said: "I have often looked at that sun behind the President without being able to tell whether it was rising or setting. But now at length I have the happiness to know that it is rising."

As the sun was rising then, it is still rising today. And constitutional government shall continue to rise in the annals of history as long as men continue to pledge themselves to its cause. It shall continue to rise as long as we cherish our rights and faithfully execute our duties. If we each stop for a moment in our busy lives to recall the importance and greatness of the Constitution, if we briefly recall our golden heritage, if we remember that its future depends upon us, then the Constitution is as safe as anything in this hectic world can be. Yet, lest we become too confident, it is well to remember that ancient legend I mentioned a few moments ago, for should we ever forget the Constitution ours would become the "country of the blind."

With a public attitude of responsibility and confidence in the future, and caution lest we become blindly indifferent, the Constitution, like the rising sun, will continue to climb to new heights of peace and justice, and the government of the people, by the people, for the people shall not perish from the earth.

## Correct List of Those in Attendance at the Mass Media Committee of the Consultative Conference on Desegregation

EXTENSION OF REMARKS
OF
### HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. WILLIAMS. Mr. Speaker, on March 13 I inserted an article from the Jackson (Miss.) Daily News, which contained the minutes of the Mass Media Committee of the Consultative Conference on Desegregation, Wednesday, February 4, 1959. In the first paragraph of this article there was a list of persons in attendance. A printing error occurred in the first paragraph. The correct list of those present should read as follows:

Arnold Aronson, National Community Relations Advisory Council; Gunther Lawrence, Union of American Hebrew Congregations; Henry Moon, National Association for the Advancement of Colored People; Alex Morisey, American Friends Service Committee; Guichard Parris, National Urban League; Alan Reitman, American Civil Liberties Union; Ed White, United Steelworkers of America; chairman, Ali Bernheim, American Jewish Committee; secretary, Harry Fleischman, National Labor Service.

Mr. Speaker, I am glad to make this correction for the RECORD.

## Back to the Summit

EXTENSION OF REMARKS
OF
### HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. BOSCH. Mr. Speaker, on March 16, 1959, we all applauded the President's speech in which he made our position on Berlin clear. He stated that we would "not give an inch." I hope in the talks about a summit meeting we are not encroaching on that "inch." Before we enter any summit meeting there should be a definite agenda set up which reiterates the Atlantic Charter, self-determination for all peoples, reunification, and, at long last, the foundation for a just and equitable peace. Only if these are agreed on can any good, based on past experiences, come out of another summit conference.

Under leave to extend my remarks, I include an editorial from the New York Daily News of March 24, 1959, which is worthy of our attention:

BACK TO THE SUMMIT

The weekend huddle of President Eisenhower and Prime Minister Harold Macmillan brought one major decision. We now seem committed to a meeting of the Big Four (United States of America, Britain, France and the U.S.S.R.) Foreign Ministers. Then, if the foreign ministers are able to agree on topics, Messrs. Eisenhower, Macmillan, de Gaulle and Khrushchev will sit down for a top confab, some time this summer. Macmillan even talks of a whole series of these conferences.

Some such summit event has long been craved by Khrushchev, who yearns for international respectability; and by Macmillan, who possibly could do with a little extra prestige and publicity in advance of Britain's next election.

COMMUNIST DOUBLECROSS

But what will happen, actually? The only precedent came on July 23, 1955. That summit conference in Geneva (Eisenhower, Eden, Faure, Bulganin) agreed in a solemn communique that "the settlement of the German question and the reunification of Germany by free elections shall be carried out. The Foreign Ministers will make whatever arrangements they may consider desirable."

But on November 16, 1955, V. M. Molotov, then the Soviet Foreign Minister, blandly refused to agree to any German vote whatever which might free East Germany from its Red satellite category.

The conference order may be reversed this year. Khrushchev rather than his present Foreign Minister, Andrei Gromyko, may pull the rug from under the West. Only one thing's certain: you can't trust any Soviet agreement, no matter which slippery Commie does the signing.

Added thought for our conference agenda: Even Senator MIKE MANSFIELD, Democrat of Montana, urges that Secretary of State Dulles should stay at the diplomatic helm though he may be physically unable to attend the Foreign Ministers' meeting. We agree, enthusiastically.

## Need for an Overall Science and Technology Agency

EXTENSION OF REMARKS
OF
### HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. ANFUSO. Mr. Speaker, the first sputnik aroused great public and congressional concern over the state of American science and technology. That event served to alert us and to spurt us on to action, with the result that during the past year and a half we have made considerable progress and scored some notable achievements in these fields.

There is some evidence, however, that as a result of our own recent successes in astronautics we are once again lapsing into a state of complacency. The Eighth Annual Report of the National Science Foundation warns us as follows:

We have only made a beginning; the major job is still to be done. As a nation, we appear to forget that we live in a competitive world and shall continue to do so. It seems abundantly clear that we shall rapidly lose in competition, unless we can show more determined and constructive efforts than we have during the past years.

This is a warning we should heed. It deserves our fullest attention. I have given it considerable thought and it is as a result of this warning that I was prompted to take the action described in the succeeding paragraphs.

A vital element in an adequate science program is, to my mind, the creation of a single agency in which the National Science Foundation, the National Aeronautics and Space Administration and other existing Federal science agencies can be gathered together under one roof. This would make for efficiency, economy, better coordination and cooperation, and above all for greater achievements in less time.

At the present time, our Government administers a vast and highly diversified research and development effort in science. This, in itself, is a task of almost incredible complexity. Considering the dimensions of this task, it is not surprising that we have as yet not been able to devise the most effective ways and means for managing such a gigantic and varied program. To be sure, there have been attempts in the past to relate the research and development activities of various government agencies to each other, as well as to research activities being carried on outside of the Government. These efforts, however, have had limited objectives and even more limited results. Consequently, the fundamental problem, that is, to devise effective means to manage our scientific research program, remains unsolved.

In order to help solve this problem and to establish the means whereby effective management of our science program could be obtained, I have introduced a bill, H.R. 5612, which calls for the creation of a Science and Technology Agency. It is to be known as the

"Science and Technology Agency Act of 1959."

The bill would create an independent Science and Technology Agency for the coordination and improvement of Federal functions relating to the conduct and support of scientific training and research. It takes the first necessary step of reorganizing and integrating the various science programs of the Federal Government. The Science and Technology Agency is to be headed by a Director appointed by the President with the consent of the Senate.

To this new Science and Technology Agency shall be transferred certain existing agencies and functions of the Government, together with their personnel, property, records, et cetera. Specifically named in the bill are the following agencies: National Science Foundation, National Aeronautics and Space Administration, National Bureau of Standards, and such other agencies as the Congress believes should be incorporated in the overall agency.

Such additional matters as the processing and distribution of scientific information, educational grants and loans, national institutes of scientific research and cooperative international programs may later be incorporated in the bill, or discussed in the committee's report to the House, as the recommendations of the Executive agencies and the testimony at the hearings on the measure would demonstrate their need. The bill was referred to the House Committee on Science and Astronautics, and I trust the committee will place it high on its calendar for early hearings and due consideration.

## Lesson From Vassalboro

EXTENSION OF REMARKS
OF
### HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. McINTIRE. Mr. Speaker, government by the people is evidencing itself in Maine towns currently holding their annual town meetings. Recently at the town meeting of Vassalboro a young father of three preschool daughters eloquently, courageously, and with strong conviction presented to his fellow townsmen a plea to curb unnecessary spending.

The Daily Kennebec Journal of Augusta, Maine, the newspaper serving the area, dealt editorially with that aspect of the town meeting in its edition of March 11, 1959. The editorial which follows merits the attention of every American:

LESSON FROM VASSALBORO

Is the Ship of State in real distress?

Well, is a national indebtedness of $280 billion anything to shake a stick at—or is it not?

The voters in Vassalboro saw these questions graphically presented and dramatized at their town meeting.

They saw the American flag displayed upside down, as it would be flown by a vessel in distress. And they heard criticism of such use of the flag—and were given an explanation.

The explanation was that nothing in the way of disrespect was implied, but that the idea was to dramatize the need to economize on expenditures of their own town money. The point was that the ship of state, wallowing in a sea of debt at a time when this country is engaged in a literal death struggle with international communism, really is in distress.

Where is the place to call a halt to the spending spree that adds constantly to our astronomical national debt?

The place to start—the Vassalboro town meeting was told—was right there.

And, wherever you live and exercise your voter's right, you could amend that, merely by substituting the name of your own city or town.

The place to start calling a halt to further reckless spending, deeper indebtedness, higher taxation—is right where you have your own small voice in local government.

This doesn't mean that towns and cities must or can't call all necessary spending. They can't, of course, and they won't.

But the Vassalboro voters heard this—and it is a truth which also applies everywhere else:

There are some things the voters need and must have and pay for. There are some things they need but can postpone buying for awhile. And lastly, there are some things—luxury-spending measures—which they do not really need but which merely appear desirable to some (it could even be a majority) of the voters.

We won't get out of debt, we won't live to see tax bills reduced, if at every opportunity we continue clamoring and voting for those things which are desirable but which we can do without.

That was a worthwhile lesson, from Vassalboro.

It was a lesson we should like to see equally well dramatized in every State capital in the land, in every city hall—and in both Houses of Congress.

## Reducing the Staggering Federal Debt

EXTENSION OF REMARKS
OF
### HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. KING of Utah. Mr. Speaker, many Americans see our staggering Federal debt as an ominous threat, not only to our Nation's fiscal integrity, but to the very survival of our free enterprise system and our democratic way of life. I can appreciate their concern. I share it. I am especially concerned over the magnitude of our debt, rather than the fact of the debt.

Mr. R. S. Shade of Tulsa, Okla., has drafted a provocative proposal for retiring the Federal debt. His proposal will, I believe, interest every American who shares the honest desire to reduce the debt. His proposal follows:

OUR $280 BILLION NATIONAL DEBT—IT IS OVER $485 BILLION CHEAPER TO PAY IT OFF THAN TO PAY THE INTEREST

When we consider our national debt, we wonder how and when it can ever be paid. No voice has been raised in the Halls of Congress, or among the financial leaders of our country, proposing any specific plan for its liquidation.

The average man realizes that if he has a mortgage on his home, or any other type of debt, that there must be a plan for the regular payment on the principal and the interest due, in order to pay it. If this is not done, he knows that serious trouble will ensue, with bankruptcy in the end. His history has taught him that numerous nations have fallen into decay and ruin through their blithely ignoring sound financial principles.

There is a plan which our great nation can follow which will pay this national debt, and at the end of 29 years the amount required for payment on the principal and interest would be less than the annual interest we are now paying. This plan would cover a period of 100 years, which in the life of our Nation is much shorter than an individual carrying a mortgage of 25 years, or a corporation with one of 50 years.

A payment of 1 percent of the principal would be paid each year, plus the interest due. At the end of the first year, we would pay 2.8 billion on the principal, plus 9.8 billion in interest. At the end of the 100th year, we would pay 2.8 billion on the principal, plus about 98 million in interest. The average amount of the interest over the 100 years would be 4.949 billion per year, or 494.9 billions for the 100 years. This amount, plus the debt of 280 billions, would make a total of 774.9 billions, and the debt would be completely wiped out.

Now, if we continue our present policy of paying the 9.8 billions in interest each year, we will then have paid 980 billions in the 100 years, and the debt of 280 billions would still be there. These two amounts represent a total of 1,260 billions, which is 485.1 billions more than the 774.9 billions required to pay both the debt and the interest. This is a saving of 4.851 billion per year, or enough to pay the principal payment of 2.8 billion and have 2.051 billion to pay on the interest each year. What prudent nation could overlook such a golden opportunity to save 485.1 billions, and still pay off its debt?

Our Nation is now, and has been, in a cold war with an implacable enemy, who would delight in destroying us, and the other free nations of the world. We are gradually winning in this gruelling struggle, but we can do much more. Lenin and Stalin taught their dupes that they would compel us to spend ourselves into bankruptcy and ruin. In the last 18 years our dollar has depreciated over 50 percent in value, and is now selling at a discount in several nations of the world. However, we can spread dismay in the ranks of our enemy when we proceed to balance our national budget and set up a sound plan to retire our national debt.

The Russian Government induced its people to purchase its savings bonds for their future welfare, but under Khrushchev they heartlessly repudiated them all.

By putting our plan in effect:

It would be a shining example to all the world as to what our Government considered to be its sacred obligation to its people.

It would restore confidence at home and abroad in the stability of our dollar.

It would convince our people that we are no longer drifting past the point of no return in our national fiscal affairs.

It would slow down the scared flight from the dollar into stocks and other equities.

The Treasury would be able to sell long-term bonds, and thus avoid the prevalent danger that is so inherent in short-term securities.

With such a plan in operation, each succeeding administration would be under obligation to the people to keep it in effect.

Let our great Nation quit its drifting and face up to its responsibilities; otherwise, what was set up by our Founding Fathers and others, through blood and sacrifice, will sink into ruin and end up in communism itself.

## Population Explosion

EXTENSION OF REMARKS
OF
### HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. LEVERING. Mr. Speaker, it appears that the United States is the first, and apparently the only, country in the history of the world to consider its agricultural abundance as a curse instead of a blessing. I wonder if all the public weeping and wailing about our farm surplus is a very complimentary tribute to our national intelligence in the light of the facts that two-thirds of the world's population goes to bed hungry every night. I am not referring merely to an inadequate diet from the nutritional point of view, but hunger-of-the-belly kind that makes kids cry. I have seen this kind of hunger on the march in the Orient, where the life expectancy is from 28 to 30 years.

We know that communism travels on empty stomachs. The Congress now is being asked for some $3 billion to be added to some $6 billion already authorized but unexpended as foreign aid for the alleged purpose of winning the minds of men and women in foreign lands. I wonder how effective these dollars, wrung from the taxpayers of this country, can be when the people starving overseas hear of the food rotting in our storehouses? How long will it take us to learn that food has a universal appeal that breaks through any language barrier? A few days ago I appeared before the House Committee on Agriculture and urged an extension of Public Law 480, believing that we could turn our agricultural resources into an American asset in international economic and political relations.

The following article entitled "Population Explosion," by Neal Stanford from the March 21, 1959, edition of the Christian Science Monitor points up the appaling figures of the world's population growth, suggesting, I submit, it may not be many years until our great problem will not be one of food abundance but one of scarcity and want. I trust my colleagues in reading this factual account will find encouragement to consider a more realistic attitude toward the great blessings of our land:

POPULATION EXPLOSION
(By Neal Stanford)

What about this "population explosion" which President Eisenhower considers just as challenging and threatening as the military power of the Sino-Soviet bloc, and the fanaticism of international communism's conspiracy?

As the President told Congress in his message on the mutual security program: "As a result of lowered infant mortality, longer lives, and the accelerating conquest of famine there is underway a population explosion so incredibly great that in little more than another generation the population of the world is expected to double. Asia alone is expected to have 1 billion more people than the entire world has today."

Yes; it is difficult to grasp the immensity of this population explosion and few people are aware of it. Yet during 1957 and 1958 some 90 million people were added to the world's population. This is about equal to Japan's present population, and twice that of France.

The Population Reference Bureau here in Washington has made a study of this coming "population explosion" that is without doubt the basis for the President's comments and warning. Says the bureau: At the rate the world's population is growing there will be nearly 7 billion people on earth by the year 2000. Today there are some 2,800 million.

The population of both the world and of the United States is growing at the rate of 1.7 percent a year. Most underdeveloped countries have a growth rate of 2 percent or more—and some 3 percent.

According to the Bureau's study it is not so much any increase in birth rates that accounts for this zooming growth rate. It is rather the rapidly falling death rates. Concludes the study: "This sudden and sharp drop in mortality has set off the jet-propelled surge in population growth since World War II."

China's population, it is estimated, is growing at the rate of 2 percent yearly. With a population base of some 650 million, that means that there are each year some 13 million more Chinese on the mainland.

In the period between 1959 and 2000 the marked growths in population will occur in Asia, Africa, South America. By 2000, it is estimated, Asia will have nearly 62 percent of the world's population; Latin America will have 9.4 percent; Africa 8.2 percent. North America's percentage will decline from 6.7 percent now to 5 percent. And Europe's percentage (the U.S.S.R. included) will drop from 23 percent to 15 percent.

It is the implication of these figures and growth rates that is so impressive—if not alarming. Involved are present world trade patterns, raw material, and finished products markets.

This population problem becomes even more astonishing and alarming when viewed from the perspective of history. It took 200,000 years for the world's human population to reach 2,800 million. Yet in another 40 years that may more than double. With the present rate of increase, it is not difficult to figure that give the world another 600 years or so and there will hardly be standing room on this planet—about one square meter per person.

Of course such a situation is fantastic—and unimaginable. Something will have to happen to break or resolve this population spiral that has President Eisenhower listing it as one of the four major social or political realities of the present world.

Then there is the related problem of feeding this expanding explosive population. That is one reason why the fast-growing underdeveloped countries continue to remain underdeveloped. In the race between population and development, these new countries have a hard time making any progress.

Already some two-thirds of the human race is underfed. The population explosion threatens to make it impossible for the world to produce food increasingly fast enough to keep up with the population growth.

Some people think that flight into space may be the answer to the population problem and algae farms will be the answer to the food problem. But while those afford fascinating subjects for speculation, they are not seriously considered as real answers to these serious problems.

## M Men Basketball: Bulwark of Spirituality and Clean Living

EXTENSION OF REMARKS
OF
### HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. KING of Utah. Mr. Speaker, the senior tournament of the largest basketball program in the world is being played this week in my district, on the campus of the Brigham Young University, at Provo, Utah. Its junior counterpart was played last week in Logan, Utah.

These tournaments are the annual all-church basketball tournaments of the Church of Jesus Christ of Latter-day Saints. The participants represent the best of more than 2,500 teams and 25,000 players scattered throughout the 49 States, Canada, and Mexico.

However, Mr. Speaker, it is the ideal and the program behind the tournaments, and not their size, which compels me to call them to the attention of my colleagues. In a Nation deeply disturbed over the growing menace of juvenile delinquency, this program represents a shining example of wholesome and constructive youth activity which has taught thousands of young Americans a respect for good health, clean living, morality and chastity, and, at the same time, has given them a deeper love of God.

This program is carried out by the Mutual Improvement Association of the Church of Jesus Christ of Latter-day Saints, which was founded by Brigham Young. This great western colonizer, who was the second president of the Latter-day Saint—Mormon—Church, saw the teen-age problem in his own day. In 1869 he called together his teen-age daughters and, through them, established an association to give effective supervision and direction of young women of the church in their use of leisure time. In 1875 he founded a similar organization for the young men.

The wisdom and vision of Brigham Young were apparent in the associations from their beginning. An early issue of the magazine which the young men established soon after they were organized observed:

> The organization spread with astonishing rapidity, and in a few months, towns where there had been crowds of uncouth boys loitering around the stores, holloaing in the streets and breaking horses on the Sabbath day, a change was seen. In some cases, the roughest of these boys had been chosen presidents of associations.

In this century, as the delinquency problem has grown, these organizations have grown in both size and influence. Their total membership has passed 355,-

000 in some 2,000 wards and branches of the church throughout the world.

The scope of the program has broadened over the years, but the purpose has remained constant: the constructive use of leisure time in wholesome recreation, study, social, and athletic activity, and, above all, in religious training.

A lack of religious training has been a major cause of delinquency. This fact has been asserted repeatedly by J. Edgar Hoover, a peerless authority on the problem.

This celebrated director of the Federal Bureau of Investigation has said:

The churches are in the front trenches of America's crime prevention crusade * * * I have been profoundly impressed with the fact that the churchgoing people are the most substantial group of citizens in the Nation. Church attendance and crime appear to be like * * * oil and water—they do not mix. * * * The greatest single factor in crime causation among juveniles today is the disintegration of the American home.

Mr. Hoover has also observed:

Juvenile delinquency is always rooted in adult delinquency, and only through general acceptance of higher moral values can we solve the problem entirely. The easiest way to bring this about, in my judgment, is through a return to religion. For several decades the general trend has been away from the age-old belief that man is God-centered and responsible for his thoughts and behavior to a higher power as well as to his fellow man. The resultant materialism has emphasized the values of expediency, shirking responsibility, and selfishness.

The Mutual Improvement Associations offer instruction and supervision for every teenage group, and for young men and women. It also encourages the participation of parents.

At the local level, the associations meet weekly throughout the year—usually on Tuesday nights. The meetings open with a song, prayer, and with other appropriate devotional exercises. Later the members separate for classwork, project activity, and special events.

Variety and flexibility are cornerstones in the program's success. Members have ample opportunity to express and cultivate their special interests and talents—including athletics, public speaking, and the cultural arts.

In the winter months, the young men organize basketball teams. The winners in league play advance to division tournaments, and the division champions become the participants in the all-church tournaments.

The senior tournament, which is being played this week, is held annually in the spacious George Albert Smith Fieldhouse at Brigham Young University, which is the largest church-operated university in the Nation. With pride and enthusiasm, Dr. Ernest L. Wilkinson, Brigham Young University president, and the school's 10,000 students serve as hosts and provide cheering sections for the 32 teams. Thousands of spectators annually see the tournament, whose championship game traditionally is televised to western audiences.

In other seasons the young men and boys play softball and volleyball. MIA athletics are a year-round program which stresses the blessing of good health and the value of physical fitness. The all-church championships are cherished prizes. But the emphasis lies not alone upon winning. In every all-church tournament a prize more coveted than the championship itself is the sportsmanship trophy, whose winners are rousingly applauded as the real champions in their own right.

In the local league play, and in the tournaments, the players invariably convene in prayer. Under no circumstances is profanity countenanced.

Only the boys who are morally clean and who live a strict health code—known among the Latter-day Saints as the word of wisdom— are eligible to play. The code permits no smoking and no drinking and urges members to practice temperance and moderation in personal habits as well as in diet. Chastity is a strict requirement.

The former middleweight boxing champion of the world, Gene Fullmer, himself a product of the program, has said that MIA athletics and the word of wisdom are all that a young man needs to keep in good physical condition.

Perhaps the best measure of the success of the MIA is the appeal it holds for outsiders. Visitors are encouraged to participate—and often do. They are welcomed into every activity and are eligible for basketball, softball, volleyball, provided they respect the word of wisdom.

In Japan the MIA meetings have attracted more nonmembers than members. In 1956 the average attendance at the meetings in Japan was 760 Latter-day Saints and 1,500 nonmembers.

Rebecca Franklin, writing in the New York Times Sunday magazine in 1955, gave the program this tribute:

Undoubtedly one of the most efficiently organized youth movements in the world, MIA provides spiritualized recreation for its members through music, drama, speech and athletics, a never-ending round of carefully supervised activities. For 100 years the Saints have been keeping 'em busy and out of mischief.

In concluding, Mr. Speaker, I find the reason for the success of this program very clear—it holds the key of genuine happiness and has given that key to young Americans. It has shown them that lasting success and happiness do not lie in the pleasures and temptations of the material-rich world which surrounds them, but lie instead in the spiritual treasures in which home and church and faith and service abound.

## Pricing Ourselves Out of Business and Jobs

EXTENSION OF REMARKS
OF
### HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. McINTIRE. Mr. Speaker, it is a cause for great concern that every day we are finding more and more evidence that America is succeeding in making its economy very nearly untenable in the international competitive world.

An example of this is reflected in this editorial item from the March 21–22, 1959, issue of the Bangor Daily News, which I am submitting to the RECORD.

PRICING OURSELVES OUT OF BUSINESS AND JOBS

Various national business leaders recently have been warning that American goods are pricing themselves out of the market.

An example of what they meant was evidenced close to home this week, when the low bidder for the U.S. Navy radio station project at Cutler offered to reduce its figure $200,000 if it could use Italian-made steel for the towers. This isn't an isolated case: A large amount of Japanese and Italian steel went into building the St. Lawrence Seaway project.

American steel is not the only industry hurt by the lower prices of foreign competitors. The housewife need look no further that her favorite shopping places to find a variety of foreign goods on sale—Japanese sewing machines, textile products, cigarette lighters and many other articles.

A British firm's $13 million bid was $6 million below the lowest of American firms bidding for a contract to build generator equipment for the Tennessee Valley Authority.

If foreign firms can undersell U.S. products in this country, it is a sure thing they can do so abroad, and with greater ease. They have us going and coming.

The resultant loss in American sales means reduced production, which in turn means increased unemployment. This should be of serious concern to U.S. union leaders who currently are campaigning for a new round of wage increases.

It is understandable that labor chiefs want the best contracts they can obtain. But their responsibility today goes far beyond this single, narrow objective. They should be doing something about preventing American goods from being priced even further out of the market. They should recognize that production cost determines price and that by far the greatest production cost is the payroll.

What use wage boosts, shorter working hours, and increased fringe benefits if American industries are forced to curtail production and lay off workers because their products are too high priced to meet foreign competition even in our own land?

## CVP Profits Climb to Record High

EXTENSION OF REMARKS
OF
### HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. MOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a factual and highly significant news story from the Sacramento (Calif.) Bee of March 19, 1959, entitled "CVP Profits Climb to Record High." This story points out that net earnings from the famed Central Valley project in California reached an all-time high in 1958 of $9,233,396.

The article states that Bureau of Reclamation officials estimate the total net income to date from CVP operations has reached $82,181,520. This money, as you know, goes into the Federal Treasury to be applied toward repayment of the

cost of Federal construction of the project.

In view of the current insistence of the Secretary of the Interior that a so-called power partnership with a local California utility would save the Federal Government considerable money on the Trinity Power project, it is most illuminating and interesting to note in the figures released by the Bureau of Reclamation that CVP power sales grossed $13,227,240 last year, while power sales in 1957 total $11,442,835.

The report shows 1,689,487,361 kilowatt-hours of electric energy produced at the Shasta, Folsom, Keswick, and Nimbus plants was delivered to more than a score of public agencies, entitled by law to preferred use of CVP power, including the Sacramento municipal utilities district.

In comparison, the Pacific Gas & Electric Co. got 1,794,677,132 kilowatt-hours of the output. Additionally, the Bureau of Reclamation paid the Pacific Gas and Electric Co. $524,171 for transporting CVP power to preferred customers over the power company's lines.

The text of the news story follows:

CVP PROFITS CLIMB TO RECORD HIGH

Net revenue from Central Valley project operation in 1958 was $9,233,396, the highest net earnings in the 14 years the giant reclamation works has been serving the people of California and the Nation.

B. P. Bellport, Sacramento regional director of the Federal Bureau of Reclamation, which operates the CVP, noted the net revenue was 34 percent higher than the $6,895,131 earnings of last year.

TOTAL TOPS $82 MILLION

Total net income to date from CVP operations, Bellport reported, has reached $82,181,520. This money goes into the Federal Treasury to be applied toward repayment of project construction costs.

Gross revenue from all sources totaled $17,966,444 for 1958, bringing the gross revenue since the start of operations to $146,943,306.

MEETS EXPECTATIONS

The financial picture of the CVP was described by a Bureau official as meeting all expectations.

"The wealth production capacity of Central Valley project is its greatest asset," Bellport said in his annual report.

"The availability of water for irrigation, municipal, and industrial use and lands protected from floods makes the Central Valley one of the Nation's great agricultural and industrial areas.

"The increased wealth of farm and orchard products and the associated general increase in the economy of the area, is a gratifying result of project operation.

"Over 800,00 acres of valley lands received a full or supplemental water supply from the Central Valley project. In addition, 629,500 kilowatts of electric generating capacity are producing low-cost power to supplement the growing needs of the area."

The wide flung CVP system in the Sacramento and San Joaquin Valleys includes 5 dams and reservoirs, 10 pumping plants, 364 miles of canals, 25 miles of wasteways, 390 miles of operating roads, and radio and telephone communications systems. Operating and maintenance costs in 1958 totaled $5,623,162.

ELECTRIC ENERGY UP

Bellport reported power sales grossed $13,227,240 last year. The electric energy production, highest since the Shasta Dam powerplant began operating in 1944, totaled 3,880,603,800 kilowatt hours.

Power sales in 1957 totaled $11,442,835. The increase last year was attributed to the fact that an idle generator was restored to operation at Shasta and there was a generous supply of water for generating electricity.

Irrigation water deliveries total 2,541,837 acre-feet, a record, and brought in $4,194,418 compared to $3,743,613 in 1957.

Municipal and industrial water revenue was $455,676, approximately the same as in 1957.

TO PUBLIC, PRIVATE USE

The report shows 1,689,487,361 kilowatt-hours of electric energy produced at the Shasta, Folsom, Keswick, and Nimbus plants was delivered to public agencies, entitled to preferred use of CVP power, including the Sacramento Municipal Utility District.

However, the privately operated Pacific Gas & Electric Co. got 1,794,677,132 kilowatt-hours of the output.

In addition, the bureau paid the PGE $524,171 for transporting CVP power to preference customers over the power company's lines.

The bureau's report shows construction advanced rapidly during 1958 on the Trinity River division, which will add 865,000 acre-feet of water annually to CVP supplies and produce 369,850 kilowatts of power.

POINTS TO GROWTH

Bellport noted one of the greatest westward migrations of population in U.S. history is now taking place and the ability of California to absorb this increase will depend, in large measure, upon the provision of an adequate water supply.

He emphasized the bureau is investigating several additions to the CVP works intended to stabilize water supplies in areas of ground water overdrafts and to conserve surface water supplies as well as provide flood protection and opportunities for hydroelectric power generation.

"Of primary importance," he stated, "are studies of progress to develop plans for meeting the increasing needs for water in the east side of the Sacramento and San Joaquin Valleys extending from the Yuba River on the north of the Tehachapi Mountains on the south.

"Requests for water totaling approximately 1,500,000 acre-feet have been received from organized districts in that area which extends from the Sierra Nevada foothills to the trough of the valley and covers some 3,500,000 acres."

## American Education in the Space Age

EXTENSION OF REMARKS

OF

### HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. KING of Utah. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the speech which I delivered March 20, 1959, to the first meeting of new Space Law and Sociology Committee of the American Rocket Society. The speech, entitled "American Education in the Space Age," follows:

AMERICAN EDUCATION IN THE SPACE AGE

It is no secret that there has been a good deal of dissatisfaction with American education in recent times.

The question as to how much of it may be warranted is, no doubt, open to dispute. But the dissatisfaction is there, and I believe it merits a long, hard look. Let us take a moment to explore the reasons for this phenomenon.

Educators say that this era of scholastic sour-searching has been consistently picking up steam ever since World War II, which—like all wars—initiated a strong trend toward social introspection. World War II and the Korean war disclosed weaknesses and soft spots in many phases of our civilization. And so we became conscious of certain rips and tears in our educational fabric. This is one reason for the dissatisfaction.

Another is that we have reached a point in the evolution of history where rates of change and the tempo of events have speeded up tremendously, and are steadily gathering more speed. What was good enough yesterday will not be good enough tomorrow. Scarcely any social facet of our civilized world either was or is prepared to adjust rapidly enough to match the whirling pace of invention, of science and of population. Education is one of those social facets.

A third reason, of course, has been the overnight appearance of the specter of Soviet science, which—like the genie from the bottle—materialized on the world's political horizon with the launching of Sputnik I. This sudden realization that the Soviets were not only playing in the same technical league as the United States but, in some respects, were leading us by a disturbing margin was a rude shock to our superiority complex.

Such was the picture as we entered the space age 17 months ago. I need not describe the berating which American education has taken since then. At times the flaying has assumed almost hysterical proportions. And, while subsequent spectacular demonstrations of our own aptitude for space have quited the clamor to a degree, it can still be heard. Our educational system remains under a blanket of heavy criticism, and the conviction is still general that we must do something about it.

This leads to the key question: Is all this concern and criticism a healthy thing?

Generally speaking, I believe that so long as we do not undermine public confidence in our school system the answer is, yes. The reasons for the conclusion will be presented later. First, however, let me say that I do not hold myself out as a professional educator or education expert. However, I have taught school. My native State has a fine reputation in education. And I have always been deeply interested in the general problem.

More important, perhaps, I have listened ot many scores of hours of testimony from those who are educational experts in this matter of where-we-stand on education today, and from them I draw certain conclusions.

One of those conclusions is that the present disposition of the American public to cast a critical eye on its educational process is more than justified. Improvement would seem essential to our continued role of leadership in the world community.

At the same time, my plea is for balance. If, for example, we go on a nationwide educational binge which favors only the natural sciences—we shall almost certainly be as poorly off as if we totally ignored the need for more and better scientific training. Clearly we cannot do the latter. Nor can we do the former.

All the science in the world will not achieve the fine destiny most of us visualize for our country if we do not also continue to nourish our gifts of philosophy, law, and effective self-government—to show sustained progress in the social sciences and the humanities and, above all, in spiritual values. These are

areas in which we have a strong lead, I believe, over all but a very few of the homogenous, highly civilized small nations; and the gap between the Soviets and ourselves in these areas is pronounced.

Nevertheless, the social sciences are no more static than the physical ones. They call for continuing research and application of trained effort. Otherwise, we shall not be able to make maximum use of them in the cause of world leadership.

This is something the Russians seem to have learned very well in regard to the natural sciences. While it has become trite to call attention to the great efforts the Soviets are making in education, I am, nonetheless, impressed with the uniform observation of American educators, scientists, and lawyers who have recently spent time in the U.S.S.R., studying their institutions, an observation to the effect that education has become almost a fetish in the Soviet Union.

"Education," says U.S. Commissioner of Education Lawrence Derthick, "is paramount in Russia. It is a kind of grand passion—this conviction that children, schools, and hard work will win them their place in the sun, and on the moon. We are tday in competition with a nation of vast resources, a people of seeemingly unbounded enthusiasm for self-development, and fired with conviction that future supremacy belongs to those with the best-trained minds, those who will work hard and sacrifice."

I am not one of those who believes we must emulate the Soviets in all things. So far as education is concerned, it seems clear that they are, in many ways, trying to emulate us—whether or not they know it or will admit it. As one recent visitor to the U.S.S.R. put it: "Everywhere in Russia are evidences not only of passionate love of country but of a burning desire to surpass the United States in education, in production, in standard of living, in world trade, and in athletics. The slogan we saw most, in posters, films, and everywhere, was 'Reach and overreach America.'"

In this quest, Russia has followed the United States example. It has adopted philosophy of mass education, to attempt to raise the knowledge level of all its people, and not simply to educate a chosen few.

But if the Soviet emphasis is different from ours, and if (as our experts allege) it is topheavy in the physical sciences, stereotyped in the arts, and rigidly controlled in other ways for political purposes—still we cannot afford to ignore what is proving effective in their system.

Obviously the Soviets are making prodigious strides in science, in mathematics, physics, biology, astronomy, chemistry, nucleonics, electronics, and other sciences. And their great achievements in rocketry and the aeronautical and space sciences leave little doubt of a growing proficiency in engineering and technology. So while I believe in balance and scope for American education, a look into the future assures the high strategic importance of physical science to our national security, our prosperity, and our international preeminence. We cannot afford to lag in this direction.

After mulling over Soviet school curriculums and the reports of competent educators who have made careful studies of the Soviet educational system—what it is accomplishing and how—I am convinced that we can find in the Russian effort much that is worth serious reflection. We might even take a few leaves from their book on such points as these:

1. Provide wider and better basic scientific training at the elementary and secondary school level, using revised and up-to-date text and learning aids.

2. Emphasize languages at these same levels. I am informed that by the time a Russian youngster completes his 10th year in school, he not only reads but has conversational competence in a foreign language. Significantly, 45 out of every 100 students at this level know English, 35 know German, and 20 know French. Common sense suggests the great advantage of this in reaping the benefit of knowledge which others have acquired in other tongues.

3. Step up rapidly the translation of foreign scientific writing into English, especially Russian ones, and insure their dissemination. We may as well face the fact that Americans do not have the same everyday necessity for foreign language as Europeans, and therefore we will probably never have the same language proficiency no matter how much educational emphasis we place upon languages. We must offset this with translations. Some are being done now at Government level by the Library of Congress, the Central Intelligence Agency, and the Department of Commerce. But for the most part our translations seem to be a matter of too little and too late, with a circulation that is far too limited. The Russians' astounding progress in science is undoubtedly due in part to their assiduous work in translating scientific publications. They translate our scientific articles, journals, and textbooks into Russia soon after they are published. And their translations of our work are widely circulated among their scientists. We accept a serious handicap in the technology race when we fail to take similar advantage of their scientific publications. Naturally, not all of their scientific publications are available to us, but we are making no consistent effort to translate and distribute those which are.

The best example of this was the sputnik surprise. In scientific publications available to us, the Russians announced, some 90 days before they shot their first sputnik into orbit, the very date on which the satellite would be launched. Because we had failed to translate this information, the sputnik caught us by surprise.

4. Elevate the stature of our teaching profession. This is probably the most important and, at the same time, the most difficult of all our educational problems. Somehow it must be done.

Perhaps the root of the problem lies in the public attitude toward education. I sometimes wonder whether we Americans have the respect for education and educators that we imagine we have. If our respect were as great as we imagine, our teachers already would enjoy the professional stature they deserve. Instead, we often find them in the embarrassing plight of being their own best advocates, of waging their own fight for a comfortable living standard which would allow them to give their undivided attention and energy to training our children.

I firmly believe that in the lives of our children, education should have first priority. But in American homes I find that schoolwork is seldom given proper priority—that it must compete for time and attention with television, radio, and recreation, with social engagements, and with the preparations for those social engagements. Too much emphasis is placed on fun. Not enough emphasis is placed on the orderliness and stern self-disciplines without which there can be no significant progress in any academic field of endeavor.

In an age when the volume of man's knowledge is growing at a fantastic rate, at the time when our need for intellectual discipline has never been as great, we surround our children with temptations and distractions which obscure the importance of learning and the value of a cultivated mind. Yes, any reformation of American education, if it is to be successful, will have to begin at home.

In Russia the teacher is at the top of the professional ladder, on a par with the scientist and the party leader. He is more highly regarded than the doctor, the lawyer, the journalist, the entertainer or the artist. No doubt this is why the Soviets now operate 484 teachers colleges not counting their universities.

In the United States there are 332 accredited teachers colleges, public, and private, including the universities. While I am rarely moved by comparative figures, this, I submit, is a rather significant fact. We are having real trouble getting enough good teachers. The Russians are not. And we cannot put the blame on our educational system per se when it belongs to us, the public. So long as we make personal distinction and recognition synonymous with acquisitiveness, so long as we place teachers low on the success scale by paying them low professional salaries (far lower than comedians, ballplayers, and nightclub singers), we are going to continue to have difficulty recruiting good ones. In view of the immense importance of the teacher in our modern world and of his even more critical role in the future, this is, truly, an agonizing situation.

In conclusion, I reiterate my belief that our current penchant for criticizing American education is a good thing. It shows a flexibility in our makeup that is highly utilitarian; and it does not mean that we are not proud of our educational process which, on a broad scale, neither the Soviets nor any other people have yet been able to match.

If I may borrow words from one of this country's most experienced and penetrating educators, Byron Hollinshead:

"It would be strange if an educational system designed to carry out the democratic idea or ideal did not have defects and difficulties. No nation at any time in earlier history has ever tried to give everybody educational opportunity. But it is not only that we have tried to follow a great ideal. We can be genuinely proud of what our schools and colleges have accomplished, proud of their present efficiency, variety, and scope, and particularly proud that the professional conscience of our educators has given them the humility to see faults and the desire to correct them."

## The St. Lawrence Seaway

EXTENSION OF REMARKS
OF

### HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. LEVERING. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an editorial from the Mansfield (Ohio) News-Journal for Saturday, March 21, 1959, entitled "Landlubbers No Longer."

This editorial relates to the St. Lawrence Seaway, which has been called the engineering feat of the century. As my colleagues know, the seaway will be opened to seagoing traffic in June, with impressive ceremonies in which President Dwight D. Eisenhower, England's Queen Elizabeth II, and Prince Philip, and Canadian Prime Minister John G. Diefenbaker will participate. The seaway will make it possible for ships from the principal cities of the world to dock at Cleveland, which is, as this editorial points out, only a relatively short distance from Mansfield, and other cities and towns in my congressional district.

We are convinced that in the long future, the St. Lawrence Seaway will

prove a boon not only to the great Middle West, but to Canada, and indeed to the whole world, in that it will increase communications and trade among all people.

The editorial follows:

LANDLUBBERS NO LONGER

Beginning next month, Mansfield and Richland County and their environs will be within 75 miles of the seacoast.

The St. Lawrence Seaway will open.

Deepwater ships, our of world seaports like Liverpool and Hamburg, will find Cleveland is suddenly closer than Baltimore; Chicago, Milwaukee, Detroit, and Duluth will be as handy to Europe as Miami and New Orleans.

To shippers and manufacturers in the United States and Canada, it means the sudden addition of 8,300 miles of coast accessible to large ocean vessels—a stretch longer than the whole U.S. Atlantic seaboard.

Together, Canada and the United States poured more than a billion dollars into the 4-year undertaking. At peak effort, 22,000 men worked on the venture.

Men marshaled along the river the most fantastic array of excavating, hauling, and construction equipment ever brought together for a peaceful enterprise. With $70 million worth of machines, they cut canyons through earth and rock, and moved whole villages to make way for a broad new lake.

They dredged mountains of muck and glacial till, and pumped dry the raging Long Sault Rapids that have been the scourge of the St. Lawrence since colonial times. One 19th-century visitor remarked that he would rather cross the Atlantic thrice than travel the rapids.

In addition to making the St. Lawrence navigable for big ships, the river has been harnessed for electric power. The energy comes from 246,000 cubic feet of water which flows out to sea each second through the St. Lawrence. That is enough water to give every man, woman, and child in the United States 61 large baths a day.

The Moses-Saunders power dam below Long Sault—a single structure built half by the United States and half by Canada—is already delivering about 50 percent of its total planned output of power. When all generating units are installed, it will normally drop the whole flow of the St. Lawrence through 32 turbines and develop up to 1,880,000 kilowatts of electricity.

In June a gleaming yacht will lead a procession of ships into the new waterway at Montreal. Aboard the *Britannia*, will be Queen Elizabeth II and Prince Philip, on their way to the international section of the St. Lawrence. There the Queen plans to join President Eisenhower and Canadian Prime Minister John G. Diefenbaker.

By then, a new era in history for mid-America will have begun.

## Mutual Security Gives More Security at Less Cost Than Standing Alone

EXTENSION OF REMARKS
OF
**HON. WALTER H. JUDD**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Roscoe Drummond:

ALLIANCE VERSUS FORTRESS—DECISION ON MUTUAL AID CALLED MOST FATEFUL

(By Roscoe Drummond)

It is time to get ready for the most significant debate and the most fateful decision which will be taken at this session of Congress.

The debate is: Whether to seek survival by helping our allies do what they cannot entirely do themselves or to turn into a Fortress America and try to do it all alone.

The decision is: Whether to approve the President's minimum mutual security program of $4 billion or to hack it to pieces in order to spend it some other way.

The opponents of the mutual security appropriation are counting on you to be adequately gullible, uninterested, and misinformed, so that it can be slashed with impunity.

The unanimous conclusion of the Draper Committee, a panel of distinguished and knowledgeable Americans who have earned the right to be heard, is that nothing could be more wasteful and so imperil the national interest than to enfeeble the mutual security program so that it can't do the job.

I am not suggesting that the President's military and economic aid request should slide through Congress without being questioned and without being argued. There should be debate, very earnest debate. It seems to me that the debate is coming at a good time and under circumstances which will enlist the largest public interest.

It comes at a time when the Communist military threat is greater than ever before and when, because of events in Berlin and Iraq, the Communist threat is more visible than ever before.

The debate comes at a time when we must either rescue the mutual security program from being gradually choked to death by inadequate funds or given the resources equal to the need.

It comes at a time when the Democratic leaders of this Democratically controlled Congress—who almost unanimously say they want to put more into our defenses—can show whether they really mean it. The mutual security appropriation puts the issue squarely and fairly before the administration's defense critics. If they want stronger defense as they avow they do, they must either support the President's mutual security appropriation or be prepared to spend at least three times as much as they cut from it in order to get the same military result.

Let us not forget that the mutual security program brings into being many times as much military strength as the United States pays for and—despite some admitted waste, despite some bad administration—is the economizer's way of getting the greatest security for the free world at the least cost.

At stake is not whether a half billion or a billion dollars will be struck from Mr. Eisenhower's request. For several years now Congress has so cut back and truncated the mutual security program that it can neither be planned well at home or used to best advantage by our allies.

At stake is not a little trimming here, a small cut there; at stake is the basic decision whether the United States is going to seek survival in isolation or in a common effort with our allies. On this point the Draper committee says:

"The choice our country faces is very real and near at hand. In our fascination with our own mistakes, and the constant use of foreign aid as a whipping boy, we may be gradually choking this vital feature of our national security policy to death.

"What we do this year is an important step in one direction or the other. By forthright and affirmative action we can set the example expected of us. The penalty for failure to do so can well be the beginning of the end of the free world coalition."

Those in Congress who are willing to bring about this result are counting on you not to care.

## M. W. Thatcher: National Farm Champion

EXTENSION OF REMARKS
OF
**HON. GEORGE S. McGOVERN**
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. McGOVERN. Mr. Speaker, one of the most remarkable and courageous men that I have been privileged to know is Mr. M. W. Thatcher, general manager of the Grain Terminal Association of St. Paul, Minn. He has been a tower of strength in the agricultural heartland of America.

Some of the highlights of Mr. Thatcher's inspiring career have been presented in an article by Russell Asleson, Minneapolis Tribune staff writer, which were reprinted in the Aberdeen American-News of Sunday, March 8, 1959. I ask unanimous consent that this article be printed in its entirety at this point in the RECORD:

DURABLE GTA EXECUTIVE SURROUNDED BY CONTROVERSY

(By Russell Asleson)

MINNEAPOLIS.—The durability of M. W. Thatcher, 75-year-old dynamo of the sprawling Farmers Union Grain Terminal Association, is a boon to his boosters and an enigma to his enemies.

Steeped in controversy for nearly half a century, Thatcher can point to a fine assortment of both. On Bill Thatcher, nobody is neutral.

But because of his personal charm, most of his critics must be counted in the economic and political philosophy fields.

A crusader by his own admission, the snow-haired cooperative leader has triggered many tempers in his economic battles of the past 20 years as he piloted GTA from a borrowed $30,000 into a giant marketing organization worth nearly $40 million.

His fights with the private grain trade, the National Tax Equality Association, and, lately, Secretary of Agriculture Benson have kept the public eye focused on his activities for two decades.

Few can be neutral about GTA's general manager. His grain trade competitors—and severest critics—admit he is an extremely able businessman. They also characterize him as a cynical opportunist.

But if he has a secret in dealing with co-op patrons, it is this: he promises the future.

Somewhat more than a year ago, it appeared Father Time might have caught up with the controversial co-op figure.

He became increasingly nervous and jumpy, tired easily, especially during his emotion-charged and frequent speeches. He was ailing with high blood pressure, chronic bronchitis, asthma, and laryngitis that wasn't helped by his daily smoking of three packages of cigarettes.

Under a revised health and personal schedule, however, Bill has bounced back.

"My health has improved and I feel great again," he told a cheering band of stockholders at last December's GTA convention in St. Paul. "I hope to go on for a long time, God willing."

NEW THATCHER

The new Thatcher had to learn to take it easy—and it was a difficult task.

On the business front, he dispersed some of the key responsibilities in running the giant GTA and also trimmed drastically his speechmaking.

In his personal life, he quit smoking, began taking short rest periods during the day, revised his diet, managed some daily exercise—and began a studied effort toward relaxation.

Thatcher also has limited his speaking engagements to half a dozen yearly.

"I speak emotionally and get all worked up," the GTA manager maintained. "I can't relax before or after a talk but I can have fun while I'm talking."

Thatcher likes to speak, however, and is sensitive to audience reaction. One of the few remaining oldtime stump speakers, he has a deep, resonant voice that is pleasant and carries well. He also is adept at playing an audience.

He knows all the intimate tricks of oratory: The pointed finger seeking out someone in the audience to call by his first name, the dramatic pause for emphasis, the gestures that entertain but do not detract.

He speaks unhurriedly, building up to shouting climaxes, asks questions of the audience which, at a Farmers Union gathering, invariably bring audible responses.

At 75, Thatcher is a man of medium build and craggy face who wears dark-rimmed glasses, favors bow ties, dresses immaculately, and talks in a confidential manner.

On the rostrum—or behind his big kidney-shaped and glass-topped desk—he appears much bigger than his 5 feet 9 inches and 180 pounds. He also looks younger than his years.

"My torso is big but I have short legs," he said, rocking back in his huge leather-covered office chair. "I try to keep my weight at 179–180 pounds and watch it like a hawk."

He's careful about what and how much he eats, has his rare beef sprinkled with yeast to "insure getting all the B-complex vitamins".

Thatcher was born in Valparaiso, Ind., not long after his father, Samuel, had left the farm and moved to town. Although born in the city, all his Scotch-English-German relatives were farmers and he grew up in close contact with a rural economy.

Thatcher was christened Myron and his twin brother named Marvin, names which neither fancied. One of his farmer-uncles had a span of horses, Tom and Bill, which the Thatcher twins loved dearly.

"We hated our given names and insisted people call us Tom and Bill just like the horses," he recalled.

So Bill it was—and still is. Later, he incorporated the borrowed Bill into his legal name and made it Myron William Thatcher.

It also was on one of these trips to a relative's farm that Thatcher's basic farm philosophy began to take shape—although he was but 7 and would not recognize it for many years.

The youngster asked his father why he'd forsaken the farm for the city and got this reply: "I quit because I was tired of raising crops when I had no idea what I'd get for them. Contracting and selling in town offered some security."

Thatcher contends that his father's statement has become one of the motivating factors in his work the past 30 years.

"I'm not mad at anyone," he explained. "But I feel the farmers have had a lousy deal."

He might except Ezra Taft Benson from that benevolence, however.

BENSON ANTAGONISM

His antagonism toward Benson stems from a bitter disagreement between the two over national farm policy when Benson was secretary of the National Council of Farm Cooperatives.

"I put him down as a no good rascal in 1942 and haven't changed that opinion," he said, vehemently. "I've got no use for him."

In fact, Thatcher took a public vow 2 years ago never to mention Benson by name in his speeches; now calls him "that man." But he has no such self-imposed limitations in private conversation.

Thatcher's farm philosophy is in direct contrast to that of Benson's. He believes in more Government control in both production and prices to insure farm income.

"We must recognize that the consumer benefits as much as the farmer in having reasonable stability in farm prices and this can be done only by recognizing that farm prices are made in Washington.

"We must preserve the family-farm type of agriculture. It is a way of life, the backbone of America, and must be protected. Farmers are entitled to a standard of living on a par with others.

"The future? Farmers are going to have a tough 2 years ahead but those that can weather the political and economic crisis will have made the grade because there's bound to be a healthy upturn in 1961.

"I believe the farm future depends on how successfully the farmers organize politically and economically, just as big business and big labor. And co-ops provide a means for this economic organization. Those who stay around in farming are going to be organized."

On the subject of GTA, Thatcher envisions it as a total thing, conceived to improve the lot of the family farmer.

"GTA is a machine with resources that can make a whole fight for the rights of the farmer—and be a power in the marketplace," he continued.

It is those resources that have ruffled competitors in grain trade circles.

Like most big cooperatives, a considerable portion of GTA's yearly patronage refunds are returned to farmers as stock for future redemption and the funds retained by the co-op for use as capital.

Although this is legal under present laws, private businesses score it as a special privilege and unfair competition, and are fighting to have these retained dividends taxed as income.

It is no secret that GTA competition was one of the factors resulting in formation of the National Tax Equality Association, which once was headed by Ben McCabe of the McCabe Co., Minneapolis. Last fall, GTA bought the McCabe Co. for nearly $5 million.

"Thatcher was able to see how you build up his business without paying income taxes," declared one Minneapolis grain man. "He's used the profits of business to accomplish things politically and keep the cooperatives' economic advantages."

These grain men admit, however, that GTA's business organization is made up of capable men, and is an extremely effective marketing organization.

TERMED SHREWD

Thatcher they term a smart, shrewd, business operator who exploits every advantage in dollars and cents operation of the grain business, and an important factor in agriculture.

But they don't like his policies or methods of operation.

In his dark-paneled office on the top floor of the GTA building at the corner of Snelling and Larpentuer Avenue, St. Paul (which one opposition editor once labeled Kremlin Korners to denote what he regarded as the radical views of GTA) Thatcher doesn't disdain talk of these cooperative economics—or politics.

He considers himself a liberal independent in politics although he has voted for Democratic Presidents since Franklin D. Roosevelt ran for a second term.

The GTA's convention dinner (7,000 persons) last December had the aspects of a giant Democratic rally with Thatcher fondly referring to Minnesota Senators Humphrey and McCarthy, Representative McGovern of South Dakota, and Governor Freeman—stanch Democrats all—as "my boys."

"Sure, they're my boys," he defended. "They vote for the programs that reflect our views, don't they? But you'll notice that in North Dakota, we've supported Senators LANGER and YOUNG and they're Republicans. You can't find a better man for the farmer than YOUNG."

"We support these friends of the American farmer," Thatcher added. "It's just a matter of votes. I was in Washington long enough to know that talking and orating don't mean much when the chips are down. It's how a man votes that counts."

The only picture on the wall of Thatcher's office is one of President Roosevelt, autographed with a personal note. Thatcher is a fanatical admirer of Roosevelt, considers him one of the Nation's outstanding Presidents and that it was providential he came along when he did.

Those views represent a change in Thatcher's thinking. Before F.D.R. was elected President, Thatcher considered him a phony.

"I was living in Washington in 1932 and was strong for Hoover," he recalled. "Hoover was smart on a lot of subjects, a decent, high class guy."

After the election, farm groups were advised that Roosevelt would call a special session of Congress to enact a Federal farm program—if farm groups could get together on such a program.

"Everyone would have to agree—and we did. The Grange, Farmers Union, Farm Bureau, National Council of Cooperatives, the Farmers National Grain Corp.," Thatcher pointed out. "It probably was the last time these groups ever got together on anything."

F.D.R. delivered on the promise, kept his word—and Thatcher was in the fold.

"It was not long before he wanted to see me and I got to know him well," he said with reverence. "And I was in on many of the same fights he was from then on."

Reports from Washington are that F. D. R. liked Bill Thatcher's original ideas on the farm problems and the President consulted him often.

When President Eisenhower and Robert Taft were contesting the Republican nomination in 1952, Thatcher campaigned actively for Taft in South Dakota and Wisconsin because he did not like the idea of a military man in the White House.

TAFT GOT BACKING

And Taft got the backing in both of these States. Thatcher has in his files a personal letter of appreciation from Taft for his help in the campaign.

Had Taft won, would Thatcher have voted Republican?

"No," he maintained. "I liked Taft but still preferred Stevenson."

Any thoughts of compromise with the new administration were dispelled when Benson was appointed Secretary of Agriculture.

Thatcher admits reluctantly that Benson is a battler—just like he—and fights for his program even if it is the wrong one, one that will break farmers.

Thatcher first sighted the Midwest more than 50 years ago. Working as a public accountant in Chicago, he was sent to Minneapolis to audit the books of a milling firm and got his first taste of Minnesota hunting and fishing.

Returning in 1909 to install an accounting system at the Radisson Hotel, Thatcher again was attracted by the fertile lands and abundant wildlife.

He went back to Chicago and resigned his job. He got a new one the same morning he arrived in Minneapolis for the third time.

One of his first duties was at Osceola, Wis., where a grain and mill firm was in trouble, Northwestern National Bank asked him to reorganize the firm. It was his first venture in the grain business but one that firmed his imagination for his later career.

Later, he established his own public accounting business in Minneapolis. He was hired by the North Dakota Industrial Commission and worked in Bismarck in 1920 and 1921. At that time, the Nonpartisan League movement was strong and Thatcher played a part. He also got his start in co-op work.

One of the early co-ops that found the going rough was the Equity Cooperative Exchange. As an accountant, Thatcher was called in to oversee the receivership.

As an outgrowth, the Farmers Union Terminal Association (not to be confused with the GTA) was formed, only to be absorbed eventually by the Federal Farm Board and later, the Farmers National Grain Corp., a quasi-governmental marketing agency.

Thatcher went to Washington in 1931 as legislative representative for the FNGC and remained there until 1937 when he came back to Minneapolis as branch manager and to help in its liquidation.

That was completed May 31, 1938. The next day, by previous arrangement, the GTA was set up in business with $30,000 invested by Farmers Union Central Exchange and with loans by the farm credit administration.

With the nationwide grain marketing venture collapsed, a number of regional grain cooperatives like GTA came into being. Fifteen of them voluntarily joined as the National Federation of Grain Cooperatives.

They elected Thatcher president—and have every year since.

But as Thatcher goes on year after year, one question is causing considerable speculation both within and outside GTA: Who is his heir apparent? And will GTA maintain its political militance under a new general manager?

It is generally agreed that in an emergency, J. E. Wells Jr., one of three executive assistants, would step into the gap.

Thatcher will admit privately that he's given the successor matter a lot of thought and discussed it frequently with the board of directors.

But the usually voluble Mr. Thatcher leaves the big question unanswered.

## Mutual Security

EXTENSION OF REMARKS
OF
### HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter I received from Mr. George Meany, president of the AFL–CIO:

AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS
*Washington, D.C., March 20, 1959.*

Hon. JAMES G. FULTON,
*House Office Building*
*Washington, D.C.*

My DEAR CONGRESSMAN: In behalf of the AFL–CIO, I strongly urge you to support the mutual security program for the fiscal year of 1960, as proposed by President Eisenhower.

Considering the seriousness of the international crisis, the sum requested by the President is by no means excessive. Communist imperialism is an enemy that must be fought with all our means and resources on the economic and political field, in every walk of life. The most vital interests of our country demand an adequate mutual security program and the strongest national defense. To have one without the other, or at the expense of the other, would undermine both and gravely jeopardize the security, freedom, and well-being of all liberty-loving peoples.

Moreover, the President's program is urgently necessary for meeting the stepped-up economic offensive by the Kremlin aimed at Communist infiltration and subversion especially in the industrially underdeveloped countries.

Realizing that mass poverty and hunger constitute a potentially dangerous threat to freedom and peace everywhere, we of the AFL–CIO have consistently urged our Government and other democracies to offer the underdeveloped countries sufficient help to insure their national freedom and security. In view of what is at stake in this historic struggle, American labor believes that our country must render adequate economic and technical assistance to all nations devoted to human freedom and peace.

I sincerely appeal to you to support wholeheartedly the President's mutual security program as indispensable to our Nation's efforts to meet the Soviet threat in Berlin. Prompt and overwhelming support by Congress would be of the greatest help to our country and its allies in overcoming the crisis which Moscow has provoked over Berlin and in meeting whatever other tests our Nation might face in consequence of the mounting menace of Soviet aggression.

Very sincerely yours,
GEORGE MEANY, *President.*

## Women Will Rebel

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. ALGER. Mr. Speaker, fair trade is the setting of prices by manufacturers and will occur if and when Congress sets aside antitrust price-fixing protection by an alleged fair trade bill—H.R. 1253. Some retailers blame discount houses as the cause of retailers pricing troubles. Not so. Discount houses may well be a manifestation of a change in our whole distribution apparatus. Discount houses, in short, are a recognition of a fact of life, not the cause of it.

Fair trade is unenforcible in the courts and in the marketplace. It is unenforcible because people can see for themselves that it is not fair, but unfair. Price setting is in the retailers province, price acceptance in the buyers—neither is the manufacturers choice at the retail level. Either this is so or we do not have a competitive economy.

In this Nation people cannot be regimented by economic controls—not yet anyway. Just wait until the shoppers of this Nation, the women, realize the import of the fair trade price setting under H.R. 1253, or similar bills.

## Resolution by Railway Labor Executives' Association Expresses Grave Disapproval of House Committee Action on Railroad Retirement and Unemployment Insurance Bill

EXTENSION OF REMARKS
OF
### HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. DENTON. Mr. Speaker, I received the following resolution protesting action by a House committee on important legislation.

I have been requested to present same to the House for consideration:

RESOLUTION BY RAILWAY LABOR EXECUTIVES' ASSOCIATION EXPRESSES GRAVE DISAPPROVAL OF HOUSE COMMITTEE ACTION ON RAILROAD RETIREMENT AND UNEMPLOYMENT INSURANCE BILL

The Railway Labor Executives' Association, at a special emergency meeting today in Washington, adopted the following resolution on pending legislation to amend the railroad retirement and railroad unemployment insurance systems:

"The Railway Labor Executives' Association, speaking for the chief executives of the 23 standard railway labor organizations, unanimously expresses grave disapproval of the action of the House Interstate Commerce Committee on pending legislation to revise the railroad retirement and railroad unemployment insurance system. The effect of the amendments to H.R. 1012 adopted in the committee and incorporated in H.R. 5610 would be to wipe out many entirely reasonable benefits which unemployed railroad workers have long received.

"H.R. 1012, which the committee emasculated, is identical with the bill which passed the Senate last year, and its provisions on unemployment insurance were also approved by the same House committee at the last session. That bill represented a major compromise of the original legislation sponsored by the RLEA. We agreed to accept this compromise only because the need to aid the men, women, and children of railroad families who are suffering from the current recession and rising living costs was—and continues to be—so pressing. It must be remembered that, in failing to enact this legislation last year, Congress already has discriminated against the needy of the railroad industry, since it did not neglect to pass legislation affecting unem-

ployed and retired workers in other industries at the last session, although it voted no aid to rail workers even though rail unemployment is at one of the highest levels in history.

"H.R. 5610, as reported, would introduce widespread disqualification provisions which will result in depriving railroad workers of benefits now provided in the law. At the same time, the bill would substantially reduce benefits to many others. These and other changes will mean a loss to railroad workers of over $30 million a year in benefits provided in H.R. 1012.

"We are frankly shocked and dismayed at this callous disregard for the plight of the many thousands of railroad workers who are the victims of the failure of the railroad industry to provide continuing employment to its personnel. The bill, as reported out by the committee, is unacceptable to the standard railway labor organizations, because it represents a serious retrogression from long-established principles of social insurance at a time when improvement, rather than destructive action, is essential.

"Amendments voted in the House committee this year would knock out many provisions which have been part of the railroad retirement and railroad unemployment insurance system from the year of its establishment, as well as other benefits, particularly provisions for coverage of sickness, which have been provided since the system of sickness benefits was created in 1946. We deplore such indifference to human need.

"In such circumstances, the Railway Labor Executives' Association calls upon the House of Representatives to reject the action of its committee and to adopt H.R. 1012 without major amendment."

## Excise Tax on Telephones

EXTENSION OF REMARKS
OF
### HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. WOLF. Mr. Speaker, I have received many letters from my constituents urging the repeal of the excise tax on telephones. The following resolution recently adopted by the Iowa Independent Telephone Association expresses very well the sentiment of many of the people of the Second District of Iowa in regard to this tax which was originally levied as an emergency measure:

Whereas the members of the Iowa Independent Telephone Association are concerned with the tax burden on telephone service; and

Whereas the Federal Government levies an excise tax on telephone services; and

Whereas such tax was levied during World War II as an emergency measure to help defray the costs of the war and to discourage unnecessary use of such services; and

Whereas the wartime emergency has expired and there is no justification for imposing such tax for the purposes for which it was originally levied; and

Whereas an excise tax on telephone communication is discriminatory since it singles out the telephone from other essential household utility services; and

Whereas the tax on telephone services imposes an undue hardship upon individuals and businesses throughout the Nation in the conduct of personal and business affairs: Now, therefore, be it

*Resolved*, That the Iowa Independent Telephone Association respectfully urges the Congress of the United States to repeal the Federal excise tax on communications services; and be it further

*Resolved*, That a copy of this resolution, expressing the views of this association, be sent to each U.S. Senator and Representative from the State of Iowa.

## A Good Job Well Done—Congratulations to the American Red Cross

EXTENSION OF REMARKS
OF
### HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Alfred M. Gruenther, president of the American Red Cross, and a story of the mideastern floods of January and February of 1959:

THE AMERICAN RED CROSS,
NATIONAL HEADQUARTERS,
*Washington, D.C., March 20, 1959.*

The Honorable JAMES G. FULTON,
*The House of Representatives,*
*Washington, D.C.*

DEAR MR. FULTON: Knowing that you will want additional information on the assistance given to alleviate distress of people in Pennsylvania affected by the recent floods, I am attaching a copy of the official report of Red Cross activities of the several States affected.

The Red Cross gave assistance in 110 counties in 5 States to more than 11,000 families. As I have indicated to you, all assistance from the American people through the Red Cross is an outright gift. It is based on the principle, not of replacing all losses, but of assisting disaster victims in need who lack sufficient resources of their own to start back on the road to recovery. The assistance includes food, clothing, and maintenance, rebuilding and refurnishing homes when necessary, and providing medical and hospital care as required.

Total Red Cross expenditures for the flooded area in the 5 States has increased since the attached report was prepared in advance for fund campaign purposes and the final expenditures will total nearly $3 million. The people of the States affected have contributed $282,000 to help their neighbors. The balance was provided by our national disaster fund.

For the 2-year period ending June 30, 1958, expenditures to aid disaster victims amounted to more than $26,500,000. Expenditures, therefore, have been running in excess of the rate of $1 million per month. We are doing everything possible to bring to the attention of the American people the importance of the Red Cross fund campaign through which the disaster fund must be maintained. You may be assured that the American Red Cross is determined to continue to administer effectively its humanitarian mission in the field of disaster relief.

Many thanks for your continued support in assisting to tell the Red Cross story.

Sincerely,

ALFRED M. GRUENTHER.

WHEN THE FLOODS CAME—MIDEASTERN FLOODS, JANUARY–FEBRUARY 1959

Through a good neighbor policy which began almost eight decades ago millions of Americans each year contribute their funds and spilling eastwardly into Pennsylvania's viate the suffering of families struck by disaster.

This is the story of your help to people in five States during the crucial days of the Mideastern floods and the weeks which followed.

The tragic problem of returning to a home without heat, water, light, furniture—often to face frozen silt and mud—confronted owners of 25,242 damaged dwellings. An additional 166 homes, destroyed beyond repair, would never know occupants again.

Ten days after the rivers had run their disastrous courses, 800 people were still living in 6 Red Cross shelters in the 5 stricken States.

But the answer to recovery was there. It lay in the hands and hearts of people wanting to help themselves and each other.

AID FROM NEAR AND AFAR

Entire communities—church groups, civic groups, organized labor, industry, government, youth organizations—working through Red Cross or beside it, stood shoulder to shoulder with the flood-wrecked people pitching in to chop away frozen mud, disinfect basements, truck in fresh water to replace contaminated supplies, clean, salvage, inspire.

THE NEED WAS GREAT—THE NATION RESPONDED

Normally, the networks of small rivers and creeks that scratch out intricate patterns on the land surface of the Middle Eastern States move serenely on their way—flowing east, south, and west into the Ohio River—emptying northward into the Great Lakes—and services through the Red Cross to allewinding Allegheny. They finger through quiet country towns, great industrial cities, and over rich farmland—interrupted occasionally by manmade dams and levees, and the natural rolling hills and roundtop mountains. Those who live by them jokingly describe the smaller streams as those you can walk across without getting your shoetops wet.

The streams are expected to accommodate whatever winter weather hands them—but 1959's erratic January weather in Ohio, Indiana, Pennsylvania, West Virginia, and New York made tremendous demands. On the heels of freezing temperatures and near-daily snows, a thaw began. Unnoticed, rivers raced their courses in a wild effort to absorb the sudden tonnage of melting ice and snow. Pelting, stabbing rains—in some localities 5 inches in 24 hours—followed.

On the night of January 21—from New York to Indiana—the floods took on frightening significance for more than 31,000 families. Their shoetop streams were cresting as high as 60 feet.

To the north, the thaw still incomplete, raging waters flung about ice chunks the size of automobiles, plucked bridges from their steel pilings, caved in walls of low-lying houses, and crumbled rooftops. Downstream, the ice held its fight against the rivers until they backed up slowly, nibbled away gaps in the earthen levees that bound them, poured into once-dry basements, and lapped at upper story windows. Farther southward, the ice-free rivers, stemmed by dams and levees, built up force, slammed through their barricades, carried away houses or, capriciously, left others atilt with foundations awash beneath them.

NO ONE ASKED WHO

In the early chaos of disaster, there are only two identifiable groups—those rescued and those rescuing. No one pauses to ask

"who"—only to give aid or receive it. Just as the rivers had joined forces to destroy, the people united to give help.

Throughout the flood-soaked night and into the next day, firemen, policemen, Coast Guard, Red Cross, civil defense, highway patrol, Army, Navy, National Guardsmen, and just plain people heroically manned amphibious "ducks" and power boats—tirelessly scouring the water-filled areas to rescue families from flood-threatened homes and deliver them to safe shelter. In many cases, rescuers had to return to homes where families—unable to believe they were endangered—had declined earlier evacuation offers. Some 2,600 people suffered injuries, but the minimum loss of life during the emergency hours was a tribute to the courage and calmness of the rescue workers as they transported their precious cargoes to safety.

SHELTERS OFFERED REFUGE

Where circumstances permitted, those living in homes untouched by the floods took in their less fortunate friends and relatives. Thousands of others found refuge in the 82 Red Cross shelters set up in churches, schools, and other buildings throughout the 110 flood-stricken counties. There, hundreds of adult volunteers and Junior Red Cross members worked around the clock to provide meals, clothing, beds, nursing, and medical care, and comfort to shocked and frightened victims forced to flee their homes. For hours totalling 850 days, Red Cross volunteer nurses—650 strong—served beside national staff nurses in shelters, on home and hospital visits.

When news of the flood tragedy spread throughout the country, calls from friends and relatives poured into Red Cross chapters. "My sister * * * her home was near the levees that broke. Can you tell me if she's safe?" "My mother and father * * * they're old. Did they get out in time?" Inquiries were heard and answered by Red Cross and other volunteers. In one hard-hit Ohio town, a large industrial company, eager to serve, set up a corps of secretaries before a switchboard and answered worried calls throughout the chaotic night.

MOBILE UNITS IN ACTION

Red Cross did not limit its concern to flood victims and their anxious relatives. The rescue workers and cleanup crews were also fed as they labored through the wintry nights and days. Big mobile cateens—some donated by AFL–CIO, some chapter-owned—were dispatched throughout the stricken areas. Manned by volunteers, they dispensed hot food and beverages. Where inundated places were beyond the reach of the feeding trucks, isolated victims found Red Cross-purchased food and dry bedding miraculously coming to them by boat, operated by firemen.

When the immense scorecard was totaled, Red Cross had given mass care to 26,000 disaster sufferers and fed 11,000 emergency workers.

People are characteristically resilient. With warm shelter and warm encouragement, the initial numbness began to fade and stricken families looked hopefully to the return home. "When the waters go down, we'll get back in," they said.

Instead of the waters receding, the temperature dropped to a freezing low and stilled the waters where they lay against basement walls, submerging floors and furnishings, breaking water pipes with icy plugs.

The story of rehabilitation work was repeated for more than 10,000 families in the 110 affected communities. The rubble-strewn path to recovery stretched out more smoothly and the end seemed close in view.

Then, suddenly, in February, floods struck again. In the northern rivers, great ice jams that stood 35 feet high and extended farther than the eye could see, choked rain-swollen rivers causing them to spill over their banks and swirl through towns still laboring to dig themselves out from under the wreckage of earlier flooding. Army engineers attempted to blast the ice away so that the waters might be free to follow their natural courses. But, in some places this could not be done without endangering communities farther down the river. In Indiana, the long winding ice-clogged Wabash burst its banks to heap destruction upon 14 counties which had been spared by the January floods.

So the weary, wet, heart-breaking work began again. Red Cross reopened its shelters. Whole communities joined hands to help in rescue. Emergency care was given and families were helped by the Red Cross on their way to rehabilitation and recovery.

Finally, in March, with disaster-caused needs met, the job was done. As Red Cross closed its books on another mission of mercy, more than 10,000 families had been assisted at a total cost exceeding $2,400,000.

Generous, warmhearted Americans had once again helped their suffering neighbors through the worst flood to strike the Mideast in almost 50 years.

Help came from the gentle, quiet, bearded Mennonites, who—untouched by the floods themselves—left their own interests untended and lent their talents to Red Cross to clean, repair, and rebuild ravished homes of those who could not do the job alone.

And organized labor, wearing the volunteer's Red Cross symbol, dispensed 50 tons of Federal surplus foods to hundreds of individual families and joined in the seemingly insurmountable cleaning and repair tasks.

Many others, too far away to assist physically, helped financially. Money in excess of $281,250 for disaster relief poured into Red Cross chapters from individuals and organizations—from New England to Texas, California to Florida. Nationally known merchants donated home cleaning equipment; great food chains sent canned goods; small independent grocers, themselves flood victims, contributed unspoiled supplies from their remaining stocks. An Ohio department store held a storewide, day-long sale and turned the day's total cash intake over to Red Cross to be used for disaster aid. Even children, shoveling snow-covered sidewalks, put their earnings into flood relief.

All was needed—all used. For disasters are costly beyond belief. Wherever they they strike, Red Cross is always there—ready to aid through its local chapters and their volunteers. And so it was with the Mideastern floods. Almost 300 Red Cross disaster-trained staff members and volunteers were dispatched quickly following the floods from the national offices and more than 50 chapters in 33 States. They set up disaster field headquarters in severely stricken central Ohio. From there, they fanned rapidly out into all of the disaster areas, to assist the hard-at-work local chapters in meeting the emergency needs of the victims.

A NEW START IN LIFE

The agencies and departments of government—local, State, and Federal—worked to meet their responsibilities, to repair roads, rebuild bridges, restore public utilities, meet public health problems, give advice and counsel to farmers, and to make low-interest loans available to aid recovery. Red Cross turned its attention to the problems of recovery of the flood-stricken individuals and families. Thus rehabilitation began.

The steps of family rehabilitation were covered quickly and confidentially. Each who came to relief headquarters, marked by the red and white emblem, talked to an experienced disaster worker—someone to give individual attention to that family's disaster-caused problems. Together the worker and family determined losses, needs, how the family could help itself, and the kind and amount of assistance the Red Cross would provide. Home visits by the worker immediately followed to make sure that all needs had been presented. Then, as part of planning, a Red Cross building expert trained in construction estimated the extent of damage and cost of repair.

The needs varied with the extent of damage and the families' ability to help themselves. There was a small businessman whose livelihood depended on the tools of his trade and who did not have means to replace them. In some cases, where injuries and illness had occurred, medical and nursing care had to be given. Quickly and soundly the Red Cross and the family planned recovery together. An advisory committee of local citizens, working as volunteers in the Red Cross, reviewed the information in confidence. Trained workers and knowledgeable volunteers—these were the Red Cross team to channel the generosity of Americans everywhere. All assistance was given free—never as a loan, never with an obligation to repay.

Through Red Cross, you gave this disaster assistance to your neighbors:

| | |
|---|---|
| In Ohio, to help 7,863 families | $1,965,064.94 |
| In Indiana, to help 612 families | 112,514.42 |
| In Pennsylvania, to help 1,387 families | 296,755.39 |
| In New York, to help 121 families | 44,196.26 |
| In West Virginia, to help 83 families | 5,954.96 |
| Grand Total | 2,424,485.97 |

(All figures subject to adjustment when accounting is completed.)

## Stop Lake Diversion Bill

EXTENSION OF REMARKS
OF
### HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. FEIGHAN. Mr. Speaker, under leave previously granted, I insert in the RECORD a very timely editorial which appeared in the Cleveland News on March 23, titled "Stop Lake Diversion Bill."

STOP LAKE DIVERSION BILL

The House in Washington has given the green light to the controversial bill to allow Chicago to pump more water out of Lake Michigan and into the canals that carry its sewage toward the Mississippi. Chicago argues that the oxygen from the additional water would break down sewage and thereby reduce pollution, which it claims is a critical problem menacing public health.

If the Senate unwisely elects to approve this special interest legislation, we urge President Eisenhower to employ his veto again, as he did with previous bills in 1954 and 1956.

Congress will only serve the purely local interest of the Illinois city, and at great cost, if it sanctions this diversion. Six Great Lakes States—Minnesota, Wisconsin, Michgan, Indiana, Pennsylvania, and New York—are arrayed with Ohio against this measure and hold, in our judgment, the weight of arguments against it. Additional diversion, and we accept their engineering authority, will rob these states of water power, endanger navigation by lowering the

level of the Great Lakes and the St. Lawrence Seaway, and open a dangerous precedent by giving Canada a basis for demanding the right to tap such U.S. watersheds as the Columbia River Basin. The Supreme Court, in 1930, ruled that from 1939 Chicago could take no more than 1,500 cubic feet per second out of Lake Michigan for sewage treatment and navigation purposes. Chicago now seeks an additional 1,000 cubic feet.

Neither the Great Lakes nor any other lakes should be thrown open to grabs by States which refuse to solve their own problems and seek only to encroach upon the established rights of others. It is also a matter of keeping good faith with the treaties in which we are bound to Canada. Much better that Chicago spend to improve its methods of water purification. Much better that Congress safeguard the rights of all lake-bordering States by passing legislation to maintain lake levels for the benefit of all.

## Uniting the Nations Through the Atom

EXTENSION OF REMARKS
OF

### HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. DURHAM. Mr. Speaker, it gives me a great pleasure to insert a speech made by a former Member of this House, the Honorable W. Sterling Cole, who is now serving as Director General, International Atomic Energy Agency, in Vienna, Austria. This speech was made on the occasion of the Ninth Annual Conference of National Organizations, under the auspices of the American Association for the United Nations, at the Hotel Statler, Washington, D.C., March 9, 1959. In my opinion, it contains information of interest to every Member of the House.

The speech follows:

UNITING THE NATIONS THROUGH THE ATOM

(By W. Sterling Cole, Director General, International Atomic Energy Agency, before the Ninth Annual Conference of National Organizations, under the auspices of the American Association for the United Nations, Washington, D.C., March 9, 1959)

To travel nearly 6,000 miles in order to deliver this address is some indication of the high stature of the American Association for the United Nations and the importance which I attach to the opportunity of discussing with you some of the major problems facing this newest of international organizations, the International Atomic Energy Agency. Therefore I deem it to be an honor and a great privilege as head of that organization that is part of the U.N. family to appear before you. I am grateful for this opportunity for two reasons.

First, as an American, I can share with you the satisfaction and pride in this Nation's faith in and support of the very idea of the United Nations, and in the fact that the United States is the host country to the primary and central agency of the entire family and the principal instrumentality for peace in the world today.

Second, it is an unusual opportunity for me to be able to talk face to face with so many of the people who work to make America's faith and support directly effective toward the end of a just and durable peace for all the world. Today, I want to discuss with you some of the means for doing this, the means which will convert the decisive force of nuclear fission into a uniting force of an atomically healthy world.

Atomic energy is a term loosely describing a broad salient on the frontiers of man's knowledge. It is not so much a field of knowledge itself as it is a new dimension in many areas of man's technological endeavor.

New knowledge of the atom's nucleus and the behavior of its particles has extended the horizons of man's hopes and ambitions to exploit science for the maintenance and improvement of his own welfare.

Similarly, and threateningly, atomic energy has changed by whole orders of magnitude the destructive potentials of man's ancient and degrading habit of employing organized violence when his intelligence and his faith fail him.

Atomic energy, of course, is not the only area of technological progress which has this two-way potential. The engines of war are built and fueled from the whole reservoir of scientific achievement. War necessarily confiscates the whole treasury of man's knowledge and skill. No field of science can withhold its contribution to the magma of war and no withdrawal from the pursuit of knowledge can assure exemption from war's tax which cannot help but eventually consume the values upon which it feeds.

It is necessary therefore to impose restraints on war's exploitation of science, not so much to preserve the integrity of science as to preserve man himself. Effective worldwide machinery to guarantee renunciation of military nuclear explosions is such a restraining measure. It can both demonstrate and be itself a vitally important step toward the disarmament which can release man from his frightful bondage.

It is a bondage to fear, fear of radiation poison, fear of megaton blast, fear of war's outbreak, its devastation, its aftermath, and fear of the consequences of wasteful preoccupation with war's methods and means.

Man knows from experience that fear is his most undependable motivation. It is viscous and cancerous. It devours and replaces the elements of discernment, intelligence, and judgment. It will eventually engulf instead of support any structure of peace which is built upon it. As a deterrent, it can only deteriorate.

There is a way—and there are ways—out of bondage and away from fear. There is a course open to us, a course which will lead us away from the fear-laden anxiety of competitive military buildup. It is a way by which constructive action can overcome the paralysis of exclusive dependence upon preparing for war to prevent war. History has shown us that periods of balanced military power are not permanent. A stalemate in the struggle for ultimate power does not provide the dependable foundation for permanent peace that we desire.

Today, we have an alternative course. We can relieve the pressure of dangerously competitive military preparation by turning our energies to constructive international operation—real joint operation by nations, action, not talk and coordination.

This is a course upon which a start has been made, and for which there is guidance and some experience. The guidance and the experience, as well as the means, exist in the people and the agencies of the U.N. family. The motivation, the means of propulsion, the sustaining force for continued progress along this course, lies in the minds and hearts of the people in this room, and the people in hundreds of other rooms all over the world where the realities of today's world are recognized and discussed. We have the power to move, and keep moving, and move constantly faster and more surely toward stability and equity and freedom in the relations among all the people of the world.

That course is a conscious, concerted, and coordinated effort to apply the benefits of modern technology to the welfare of mankind with something like the intensity and effetciveness with which we divert and distort the product of science to the demands of war. It is a course along which patriotism can be as productive for peace as it is preempted for war.

It was such a course which President Eisehower had in mind when he proposed to the United Nations General Assembly on December 8, 1953, that the nations, in effect, pool a certain aspect of their war resources to make possible a just and fruitful sharing among all the nations of the benefits of atomic energy. The basic and continuing idea behind his proposal was that, while continuing to strive for control over or restraints upon the destructive uses of atomic energy, the nations of the world should join forces in an immediate, concurrent, dynamic, and continuing effort to exploit the peaceful potential of the atom.

It is, of course, necessary in all fields of man's knowledge, to find and follow the ways for directing the whole of man's knowledge, the whole of the advance of science, toward man's welfare.

The underlying idea was entirely new—in that for the first time in history it was proposed that a tremendous force usable for war and destruction be dedicated to the benefit of mankind everywhere and that knowledge in the peaceful application of this new-found force be shared without favor or discrimination. The world has since come to recognize increasingly, that the idea of uniting the nations just for the constructive exploitation of atomic energy was a unique contribution to the solution of a problem which is as great as any man has ever faced on this earth.

The world first saw an example of nonmilitary joint operations in the work of the United Nations Relief and Rehabilitation Administration for immediate postwar relief in the European theater of war operations. Since then, the United Nations has encouraged and fostered work of its own and of other international agencies in the field of health, agriculture, education, communications, transport, children's aid, labor standards, currency and finance, and now atomic energy.

The measure of success of this multipronged effort to solve some of the problems and meet the constructive objectives of the United Nations will be not so much in the efficiency of management of the organization themselves—although it is of great importance—as in the extent to which the supporting governments will actually use the international channels for the accomplishments of their announced objectives.

The United Nations itself is the central pier upon and around which the strictly political issues must be weighed and considered in the never-ending task of building for peace. The work in specialized fields, in defined areas such as health or atomic energy, is part of the building job. It is that part which I want to discuss specifically and it is the part in which there are specific policy questions bearing upon the very life and usefulness of the United Nations arm for atomic energy, the International Atomic Energy Agency.

There are several basic policy questions which must be answered by every government in the world which subscribes to the objective defined in the statute of the Agency "to accelerate and enlarge the contribution of atomic energy to peace, health, and prosperity throughout the world."

It is also the objective of the statute of the Agency that, "It shall ensure, so far as it is able, that assistance provided by it or at its request or under its supervision or control is not used in such way as to further any military purpose."

The first policy question then is this:

Shall the atomic energy contribution of the technologically advanced and materially endowed nations to other countries in the world be given and applied through truly international channels; or shall we continue to channel such aid through networks of bilateral agreements for selective nation-to-nation exchange without benefit of the balance wheel of international considerations?

A second, and considerably more pressing, policy question is this:

Shall the peacetime production and utilization of nuclear materials around the world be carried out under international codes and standards for health and safety; or shall we permit the peaceful exploitation of atomic energy under varying, perhaps conflicting, and certainly confusing, and only partially effective nationally imposed standards for health and safety?

And finally, this question:

Shall the nations seek in unison to establish and maintain uniform, practical rules to prevent the diversion to military purposes of nuclear materials make their own rules and apply them as they deem desirable under unpredictable conditions of inter-nation competition?

Unless these questions are answered positively in favor of utilizing the multilateral international channels and means, then the International Atomic Energy Agency can hardly accomplish its full purpose. But that is not the only consideration.

Unless we work in unison on the problems of atomic energy, we may find that foreign aid in atomic energy becomes involved in contending national policies.

It is even more the point that we may also find that the utilization of nuclear fuels which are necessary to industry, medicine, and agriculture become bogged down in a hopeless multiplicity of rules which will provide no proper protection to public health and saftey against the radiation hazard of atomic activity and no safeguards against diversion of materials to nonpeaceful purposes.

The very statement of these two questions of policy, and they can be phrased in many ways, reflects several basic assumptions which we do not need to argue. In some respects, they are not assumptions at all, they are simply the facts of life. The following facts, or assumption, form the premise for our whole "atoms for peace" concept and effort:

First, intelligent application of the knowledge, techniques, and materials emerging from the nuclear and allied sciences can make a contribution to the peace, health, and prosperity of the world.

Second, nature and history, have left sadly out of balance the relative capability—and the needs—of the nations to apply the knowledge, techniques, and materials of atomic energy. Relieving this imbalance can itself be a dynamic contribution to peace.

Third, atomic energy is here to stay. It is going to be utilized to such an extent, particularly in the technologically and industrially advanced nations, that its inherent radiation hazard which knows no national boundaries, must be controlled in a manner uniformly effective throughout the world.

Fourth, the source and fissionable materials required for peaceful utilization of atomic energy are going to be traded and exchanged around the world in such a way that common prudence dictates a reasonable and practical system of their accounting or registration which will deter, discourage, reveal—and eventually prevent—their diversion to further some military purposes.

Such a four-point premise lifts atomic energy, as a field of science, out of the ordinary considerations of the day and provides us with an opportunity as unique as it is promising. Here is a field in which we are justified in expanding the time-honored concepts of nation-to-nation assistance and trade in favor of a truly international effort which can benefit every nation.

Although atomic energy shares its dual nature, of being both a potential boon to humanity and a scourge—a weapon of peace and a weapon of war—with other fields of man's work, it shares a crowded stage of the political problems which keep nations and people in a state of feverish anxiety; it transcends them all, by far, in these two potentialities. But it is one area and one problem which can bring new honor and accomplishment to traditional national policies and techniques of diplomacy. Atomic energy should, without real risk and with great promise of success, be treated on a truly international basis with equal opportunity to seek participation by all the nations of the world. Surely it is worth a try.

The policy steps which should be taken are fully consistent with President Eisenhower's initial proposals that the International Atomic Energy Agency be "set up under the aegis of the United Nations" and his recognition "that this subject is global, not merely national in character." Furthermore, the policies which should be adopted may be implied in the acceptance by every nation which has become a member of the agency of the conditions and the obligations of that membership.

The policies and procedures which can make atoms really work for peace can be quite simply stated. They are:

1. That direct contributions of funds to assist the atomically less advanced countries to share more fully in the benefits of atomic energy be increasingly pooled and distributed through the machinery of an international organization in which all of the donors and all of the optential recipients have a voice and which avoids the element of dependence upon a single donor.

2. That the health and safety provisions and the fissionable and source material safeguard provisions of all nation-to-nation arrangements, the so-called atomic bilaterals, become the responsibility of the agency which would insure uniform application and thereby establish a proper and equitable environment for all the nations to do business with all the other nations in the field of harnessing the energy of the atom's nucleus.

3. That all trade in fissionable and source materials for peaceful uses be conducted under internationally agreed conditions which will encourage and stimulate the use of these materials but at the same time give all the world assurance that materials dedicated to peace are not subject to possible diversion to military purposes.

These policies cannot be put into effect in one fell swoop. They should be made effective on a step-by-step basis. But all should be promptly acknowledged as the basic intent and purpose of the nations which are in a position to provide the technological, financial and industrial help, or to provide the fuel materials.

A truly international approach to these problems would be welcomed by and be a great advantage to all of the nations, not only to the advanced nations busily engaged in exploiting their own atomic resources, but also to those nations who must look to others more favored by nature and history in order to share in the technological advances of the last half century.

There would be no question of preferential treatment, no question of equity of arrangements, the health and safety of the citizenry would be protected and there would be no reason to take exception to the imposition of realistic safeguards for peaceful uses. There would be no responsibility or right of any one nation to police the atomic activities of another. No recipient of atomic aid would need to be beholden to a single national benefactor. These conditions would make for a constructive and vigorous environment for atomic development.

Uniform rules of health and safety, with completely independent check and examination for their effectiveness, and a uniform system of accounting for materials, again with a completely independent audit, would go far toward establishing the proper climate for a healthy and growing atomic power industry in all parts of the world and relieve the tension of fear from the hazards of both atomic radiation and atomic war.

We recognize that these policies cannot come into being over night, that we have a steep and tortuous road to travel. We recall the words of the Secretary-General of the United Nations at the opening of the 1955 Geneva Conference on the Peaceful Uses of Atomic Energy. He said:

"We have a long road ahead of us to traverse before nations can hope to eliminate the threat of atomic destruction. But we cannot hope to travel at all unless we begin to take down the barriers to understanding and friendship and begin to work together in growing confidence."

That confidence has been growing. Much, very much, has been done since then; we have come a long way but the end is not even in sight. One measure of the growing confidence is the very existence of the International Atomic Energy Agency. Another measure of the growing confidence would be the start of work on some form of agreement among the nations as to the conditions under which source and fissionable materials will be turned into the channels of international trade. The objectives of such an agreement would be to attain registry of source materials shipped for peaceful purposes, to refrain from supplying customers who do not accept and apply the common international health and safety standards, and finally, to shut off the flow of materials not subject to international registry and accountability.

The International Atomic Energy Agency provides the framework within which all of these procedures can be carried out. Its constitution is a treaty-statute approved by more than 80 nations. Its constituent assembly is an annual general conference of the member states, now numbering 70. Its managing directorate is a 23-member Board of Governors carefully balanced to include representation of the atomic industry nations, the material supply nations, the recipient nations, and the several major geographic regions of the world.

The agency has a staff of outstandingly competent scientists, engineers, administrators, and diplomats made up of representatives of over half of the member states, headed by a Director General who is the chief administrative officer. Its program and budget are directed and shaped in consultation with the Board of Governors, which must approve and submit the program and budget to the general conference.

The day will come, of course, when experience and greater mutual recognition of the problems will result in a simplification of the complex and even cumbersome structure established in the statute, as well as streamlining of some of the procedural provisions of the statute, but for the time being these built-in checks and balances and restraints constitute a basis for entering to a far greater degree into truly international atoms for peace operations.

The agency has begun operations in all of its assigned fields of action. It has published a manual on the safe handling of radioisotopes as the first in a series to cover all the various phases of the production and utilization of nuclear materials.

This code has already been given widespread acclaim and acceptance; it is not only

a code for agency use but also a pattern for other governments to follow and thereby achieve a high degree of universal standardization.

It has embarked on a substantially—and growing—program of technical assistance using not only funds contributed voluntarily by its own members to the agency itself—but also using funds provided through the United Nations Expanded Program of Technical Assistance.

We have completed a study of the need for nuclear training facilities in Latin America. We have granted over 200 fellowships to candidates from over 20 countries.

In response to a member's request, we are arranging for the supply of part of the natural uranium required for a research reactor to be operated by the requesting member, Japan. A system of accounting and reporting on this material is being devised—and will be applied in a manner consistent with the degree of the risk involved.

In the first 12 months of our operation we have established a creditable record, especially considering that during that time much effort was consumed in recruitment of personnel.

The agency has begun a study by a panel of scientists and will sponsor a major conference within a few months on the problem of possible effects of the disposal of radioactive wastes at sea. Work has started with other intergovernmental and international groups concerned with the problem of establishing uniform standards for radiological protection. We are moving forward positively and aggressively to bring about a universal solution in the problem of third party liability in event of any kind of accident involving hazards of radiation.

These are but a few of the highlights of the programs which are taking shape and being put into operation by the International Atomic Energy Agency. These programs will continue to grow, but the full measure of the potential of the institution and the idea presented in outline to the U.N. General Assembly 5 years ago cannot be realized unless the nations "principally involved" are now prepared to adopt policies which will be in complete accord with the purposes and objectives and the spirit of the Statute.

The first decision which must be made is clear and straight-forward. It is simply the decision that, having created an international body for defined purposes in connection with atomic energy, the agency should be supported not only with generous financial contributions—as has been the case of the United States—but fully and without qualification in its operational aspects. We can be only partially effective if some nations maintain parallel machinery to do the same thing as the agency, but subject to individual nation selection, manipulation and control.

Once this decision has been made, and with determination to sustain it, the subsequent steps become equally clear and straightforward: to discontinue further bilaterals or multilaterals, to begin to place under agency administration the health and safety and materials safeguard measures embodied in existing bilateral and multilateral agreements, to begin to channel all atomic foreign aid through the agency, and to start work on the instrument which will make possible the registration and accounting control of the nuclear fuel materials.

The measures outlined should not be taken as isolated steps which could be taken or neglected at will. They are closely related, inter-dependent; they form a whole. They are as with the facts of science, of which a distinguished scientist of France, Henri Poincare, said: "Science is built up with facts, as a house is with stoens, but a collection of facts is no more a science than a heap of stones is a house."

We have started to build a house, a structure which will be lasting and serviceable. It is the atoms for peace policy. We must build imaginatively and carefully. In this way we will be devoting our entire hearts and minds "to find the way by which the miraculous inventiveness of men shall not be dedicated to his death but consecrated to his life."

---

## PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

---

## CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

---

## CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

## LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

---

## GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

---

## RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

# *Appendix*

## Jefferson-Jackson Dinner Address by Hon. Thomas J. Dodd, of Connecticut

EXTENSION OF REMARKS

OF

## HON. JOHN O. PASTORE

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. PASTORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD remarks made by the Senator from Connecticut [Mr. DODD] at the Jefferson-Jackson Day dinner on March 19, 1959, at the Statler Hilton Hotel in Hartford, Conn.

The people of Connecticut were truly honored to have such capable and efficient speakers on this outstanding and memorable occasion. Among these outstanding orators were numbered our own majority leader, LYNDON JOHNSON, and the junior Senator from Connecticut [Mr. DODD].

There being no objection the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. THOMAS J. DODD AT THE JEFFERSON-JACKSON DAY DINNER, MARCH 19, 1959, STATLER-HILTON HOTEL, HARTFORD, CONN.

I will be brief tonight because we all want to hear LYNDON JOHNSON. First of all, I wish to express my gratitude to Senator JOHNSON for making the sacrifice that he has had to make in order to be here with us tonight.

It is not an easy thing for the majority leader of the U.S. Senate, in the midst of a busy legislative week, to add extra hours to his day to help make this happy occasion for Connecticut Democrats a successful and memorable one.

ONE OF HISTORY'S GREAT SENATORS

This willingness to make an extra effort, this self-sacrifice for the good of our party, are two of the qualities that have made LYNDON JOHNSON one of the truly great Senators in American history.

I do not say this lightly. I believe that LYNDON JOHNSON is in the tradition of six or eight truly great Senators of American history. In recent years he has carried a burden that no other Senator has ever carried.

FACED WITH DANGER

In 1953 the Democratic Party was faced with a great danger. For the first time in 20 years we were without a President in the White House to give leadership and unity to our party.

We had lost a crucial election after a campaign against us that was marked by bitterness, slander, and misrepresentation. Many feared that we would reply in kind, following the doctrine of "an eye for an eye and a tooth for a tooth." Many feared that we would act in the spirit of blind opposition that so often characterized our opponents in previous years. Others feared that we would lapse into irresponsibility, drift, and sectional division. But none of this happened. And one of the main reasons it didn't happen is that we had a leader in the U.S. Senate who, through the tireless exercise of all the skills of political leadership welded our party together, chartered a course of progress and constructive action, and let us along the path of responsible opposition that put patriotism above partisanship.

SHOULDERS GREAT RESPONSIBILITY

LYNDON JOHNSON today is shouldering a greater responsibility than any legislative leader in our long history.

In a time of continuing national and international crises, we have a national administration that too often seems tired, weary, and unequal to the task. Therefore, more and more the mantle of leadership has fallen upon the majority leader in the Senate. And he is meeting this challenge with a masterful leadership that has no parallel in the annals of the Senate.

TIME FOR PROGRESS REPORT

This is the first time that Connecticut Democrats have gotten together at an occasion like this since shortly after our great election victory of last November.

You have all been following the remarkable performance which our party is making on the State scene. And tonight I would like to take a few minutes to make a report to you on how we are meeting our campaign promises on the national scene.

Normally at this stage of the legislative year, only 2 months since the opening of Congress, there is very little to report. Normally at this time of year no major bills have been acted upon. Normally legislation is still in the bill drafting stage, or in the committee stage.

But these are not normal times. Last year we promised the people of this country prompt and vigorous action on many fronts. How are we fulfilling that promise?

PROMISES AND PERFORMANCE

We said that we would pass a housing bill that would bring us much closer to our goal of a decent home for every American—and we have done it.

We said that we would move ahead in clearing away the Nation's slum areas and getting the urban renewal program in high gear—and we have done it.

We said that we would provide a system of airports and air facilities equal to our national need in this jet age—and we have done it.

We said that we would add another star to our flag, the bright star of Hawaii—and we have done it.

We said that we would carry forward programs of loans for needed economic development all over the world—and today we did it.

We said that we would lay before the American people the grim facts of our national military posture—and we are doing it.

We said that in vital matters of foreign policy we would stand shoulder to shoulder with the President of the Untied States and present a firm and united front against Communist tyranny—and we are doing it.

We said that we would put through a great nationwide program that would revitalize depressed areas and put regions of chronic unemployment back on their feet—and next Monday we are going to do it.

JUST THE BEGINNING

And this is just the beginning.

We are going to see to it that our military leaders have the weapons they need to protect our freedom.

We are going to pass a foreign aid bill that is worthy of a country of our wealth, our ideals, and our moral values.

We are going to pass a Federal aid to education bill that will take a giant step toward the kind of education that America needs if it is to preserve its world leadership in this space age.

We are going to pass a labor bill that will drive the racketeers and hoodlums out of the labor movement and help organized labor to be what the overwhelming majority of its leaders and members want it to be: Clean, dedicated, and progressive.

We are going to continue the progress in the field of civil rights that we started with the Civil Rights Act of 1957.

I say these things not out of vague hope, but out of confidence and conviction.

ON THE MARCH

The Democratic majority in the Senate and the House of Representatives is on the march, all along the line. We are determined to face up squarely to our Nation's problems and to meet them head on. We have the leadership, we have the will, and we have the votes to give the people of this country a record of achievement that will dwarf anything in its past history. And we are going to do it.

When I stand before you a year from now at our next Jefferson-Jackson Day dinner, I will be able to tell you that these things have been accomplished.

THE TASK AHEAD

I think that on an occasion like this we can be excused for a little pride in our own party, to which we have devoted a great portion of our lives. I think we can be excused for blowing our own horn a little tonight.

But tomorrow and in the weeks and months ahead let us all remember the great trust that is reposed in us, the great responsibilities we all share, the staggering burdens we must carry in our State, in our country, and in the world.

And, humbled by the dimension of this task, let us do the very best we can to write a record that will stand our our credit, and to our party's credit, in the history books of free men in distant generations.

This task is not a partisan one. Our goals have been shared by great leaders of both parties throughout our national history. And so it is not inappropriate on this celebration in honor of Jefferson and Jackson to quote the words of a great Republican President, Theodore Roosevelt, who spoke for today as for his own era when he said: "We see, across the dangers, the great future and we rejoice as a giant refreshed, as a strong man, girt for the race. The greatest victories are yet to be won, the greatest deeds yet to be done. * * * There are in store for our people, and for the causes we uphold, grander triumphs than have ever yet been scored."

## Address by Secretary of Agriculture Benson at Cornell University's Annual Farm and Home Week Meeting

EXTENSION OF REMARKS
OF

## HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. KEATING. Mr. President, I have consistently supported proposals looking toward greater flexibility in Federal farm programs and toward greater freedom for our farmers. The people of this Nation look with more and more disfavor upon the huge cost of our present farm subsidy program. I am convinced that the farmers of America are as anxious as anyone to get the Government off their back and to operate in a free economy to the maximum extent possible.

Secretary Benson yesterday delivered a most timely address on farm problems at Cornell University's annual farm and home week meeting. I was particularly impressed by his reference to the results of a poll of farmers all across the land just completed by a national farm magazine. The results of this poll showed that 55 percent of our farm population want no supports, no controls, no floors, free market prices; get the Government clear out, while only 22 percent wanted more Government price help. These views should not be ignored by Congress in considering new farm legislation.

Mr. President, I ask unanimous consent that the text of Secretary Benson's excellent speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON, ANNUAL MEETING FARM AND HOME WEEK, CORNELL UNIVERSITY, ITHACA, N.Y., MARCH 24, 1959

I feel most deeply honored and privileged to be with you again on the occasion of your farm and home week. And yet my job in being here is mingled with a certain regret. In extending his invitation Dean W. I. Myers reminded me that this would be the last farm and home program that he would plan as dean of the College of Agriculture here at Cornell. I am sure I speak for all of us when I say that the prospect of Dean Myers' retirement cannot help but fill us with a sense of impending loss.

He is truly one of the outstanding agricultural leaders in the history of this land. Nearly all of his life has been devoted to agriculture. He has been teacher, researcher, administrator, Government official, and adviser. But above all, he has been, and he is, a farm man, and a man loved and honored by farmers. Since 1953 Dean Myers had been chairman of the National Agricultural Advisory Commission, and I can personally testify that he has been a tower of strength standing for the best interests of American farmers.

I find it impossible to set down in words all that I would like to say about the devotion, the energy, the intelligence, the untiring zeal of this agricultural statesman in his service to agriculture—yes, and I find it equally impossible to express the gratitude, admiration, and affection which I personally have for him.

My hope, and I am sure your hope also, is that his retirement will not take him away from us but that it will free him for an even broader and equally fruitful service to the cause of American agriculture.

The last time I was here for your annual farm and home week was exactly 5 years ago today—March 24, 1954. What tremendous changes we have seen in these 5 years—what heavy problems have been faced by the Nation and the Nation's agriculture.

I can think of no better place to make a frank appraisal of our challenges and opportunities in agriculture than here on the campus of this great land-grant university from which so many distinguished leaders have come.

There are many approaches to most problems—but few solutions. Sometimes solutions can be reduced to a formula. Is there a formula which can help us solve our farm difficulties? I know this is an oversimplification, but someone recently suggested to me a broad formula which might be expressed like this: Necessity, plus sound economics, plus constructive politics, equals the solution to the farm problem.

Surely there is no question as to the necessity of a solution to the problem. It is no longer merely desirable, it is essential, to do something to reverse the mounting accumulations of farm surpluses of a few crops and the heavy costs which threaten our agriculture with creeping regimentation and contribute to a serious threat against the solvency of our Nation. Let me just give you some dramatic examples of three of the six so-called basic crops on which we urgently need fundamental changes in the old laws.

Wheat is our number one commodity problem. We cannot continue with the old outmoded wheat program as it now exists. Harvested wheat acreage has been cut by over 20 million acres since 1949—yet, under artificial pricing, combined with good weather, we now have by far the greatest wheat surplus in all history.

By July 1960 the carryover of wheat will be about 1½ billion bushels—enough to supply our normal domestic requirements for 2½ years. We will have $3½ billion tied up in wheat alone.

We have spread the wheat belt all over America. Wheat acreage has increased in areas of high cost, while acres have been cut back in areas where production is most efficient. This doesn't make sense.

Tobacco and peanuts are in trouble too. We have the best quality tobacco in the world, but we have been pricing ourselves out of export markets. The world's largest tobacco market used to be in Winston-Salem, N.C. Now it's in Southern Rhodesia in Africa.

Farmers are producing more peanuts than consumers will buy at the prices at which peanuts for food must be supported—note I said must be—under the old obsolete law still on the books.

Equally important, the farm program is costing too much—it is staggering—it is indefensible.

Our total investment in price supported commodities is now $9 billion. It will probably exceed $10 billion by the end of the next fiscal year.

It is estimated that during the next fiscal year we will spend more than $1 billion—one billion dollars—just for storage, transportation, and interest on these Government-held surpluses.

These are facts.

The commodities are there, the investment has been made. No matter how we later dispose of them, whether by sales for cash with an export subsidy, sale for foreign currencies, or by outright donation to needy people, the cost to the taxpayers will be great.

Can any economist or columnist, can any spokesman for agriculture, can any Member of Congress, can any farmer, or any other citizen, deny these facts? I leave the answer to you.

No thinking person can question the necessity for a solution.

Nor can anyone seriously doubt the need for sound economics. It would not seem appropriate for me, on this campus, to discuss the economics of the farm problem with you. You are aware of it, and further you have demonstrated not only an awareness but a determination to help resolve rather than compound the problem.

So we come to the political element. Since Government has assumed responsibility in the economic field of agriculture, the most baffling—and perhaps unfortunately the most powerful factor in this formula—is politics. Any Government is a political system.

It is apparently impossible for a Secretary of Agriculture to deal effectively with the present critical problems of agriculture always on the basis of just necessity or just economics—he must sometimes face up to the politics.

If we are to have sound farm programs, we must have sound politics accompanied by sound economics.

There is nothing disgraceful in the word politics or in the word politician. Politics is the art of government and good politics makes for good government. The very foundation of this Government was a document divinely inspired that was drafted and adroitly handled by politically educated men to become an instrument for freedom. What we must strive for in the political factor of the formula is to have political action governed by the economic facts. And this is where the failures have occurred.

I think it must be admitted that in the past there has been an overemphasis on political approaches to farm problems which are basically economic.

Agriculture must not be sacrificed on the political auction block. Agriculture is neither Republican nor Democrat. It is American.

Let us be candid. Both major parties share responsibility for the situation in which we now find ourselves. But more important is the responsibility for getting to the solution.

No one has more concern than I about the cost of thes farm programs. This Secretary of Agriculture has been administering, and is still required to administer, within the straightjacket or outmoded laws the most costly, irrational, hodgepodge program ever patched together. It is the result of 25 years of political attempts to solve economic problems, seemingly with an assiduous determination to pretend that economics does not exist.

Do you think that as a farmer, the son of a farmer, yes, the grandson of a farmer, and as a former county agent, and now as a spokesman for farmers, I enjoy for one minute the distinction of administering the third largest item in the Federal budget? Of course not.

But be assured, I would not hesitate to defend this program if it were serving the best interests of our farm families and the people of the Nation. The truth of the matter is that these stupendous surpluses and heavy costs are not only sapping the vitals of free agriculture, they are also a threat to the solvency of this Nation.

The Secretary of Agriculture is subject to many pressures and cross fires. Opposition to change—to sound economic solutions to economic problems—has been almost unbelievable. My opponents can't agree on a constructuve solution of the farm dilemma. Really, the only general agreement among my opponents is this: "Let's saddle Benson with all of the ills of agriculture, and es-

pecially with the cost of the mess we helped to make for him."

There seems never to be a lack of self-appointed so-called agricultural experts. Sometimes they seem to get away with their strategy of being against everything and everybody, while offering nothing positive or constructive as alternative.

It is this type of disservice to the American people, and particularly to the American farmer, that makes it most difficult to inject commonsense into farm programs. This is destructive politics in action.

With smokescreens of distortions and half-truths, those who would shirk responsibility for obvious failures seek to obliterate the facts. But a rising crest of informed and aroused public opinion is beginning to penetrate the confusion.

Throughout this great Nation farmers and other thoughtful citizens know that obsolete farm laws, which produce chaos at great costs, must be changed.

Our farmers deserve sound programs. They have made an immeasurable contribution to our national standard of living—to the point that our people are the best fed, the best clothed, the best housed people in the world.

Our farmers face serious problems that are not of their own making.

Take the cost-price squeeze. Between 1939 and 1952 the index of prices paid by farmers, including interest and taxes, more than doubled. From 1952 to January 1959 the level rose only 4 percent. But the damage had already been done. This has created problems for our farmers that they are powerless to control. It has affected, and will continue to affect adversely, net farm income. I have the greatest sympathy for our farm people. I say we must assist them with sound programs.

If the voices of 20 million farm people in America could be crystallized into one voice, it would, I feel sure, demand more freedom for farmers.

That voice would say:

"Give us more freedom to plant so that we can run our farms efficiently.

"Give us more freedom to market so that we can increase our incomes.

"Give us more freedom to meet our competition so that we can expand our markets.

"Give us more freedom from Government interference so that we may again be independent and self-reliant."

Strong evidence that farmers increasingly want more freedom is found in the results of a poll of farmers all across the land which is just being announced.

One of the largest national farm magazines invited farmers to tell Congress what to do about price-support programs.

In replying to that poll, 55 percent voted for "no supports, no controls, no floors, free market prices; get the Government clear out."

This is a significant increase over the 50 percent who in a similar poll a year ago favored getting the Government out of farming.

Another 15 percent favored emergency supports only "to prevent disaster from a huge crop or sudden loss of markets; floors set at, say, 50 percent of parity, or 75 percent of the average 3-year market price and no production controls."

Another 8 percent wanted adjustment supports "such as 90 percent of the average 3-year market price, permitting gradual adjustment to normal markets and moderate production control when necessary to ease adjustments."

Only 22 percent wanted more Government price help. This breaks down into 14 percent who favor a return to supports at 90 percent of parity or more than 8 percent who asked for production payments.

This nationwide poll showed that 8 out of 10 of the farmers want greater freedom and less Government in farming.

Yes, the voice of the American farmer calls in louder and louder tones for more freedom to act, and less Government interference.

If this is what farmers want what are we waiting for, what is Congress waiting for? We've made our recommendations. Why don't they act?

Farmers recognize that the old basic crop legislation, still on the books, is outmoded and fails of its objective. It has placed ineffective bureaucratic controls on farmers, destroyed markets, piled up surpluses, and imposed heavy burdens on taxpayers. It does not fit the needs of our small farms comprising 58 percent of all our farms.

Despite our repeated recommendations over a period of years, the old program is still in effect on a very few crops with only slight changes. It's certainly not our program. Congress has never permitted our program to become effective. Our program has never really been tried. The present program was devised during the great depression and revised during war and recovery from war. Today we have neither depression nor war.

But we do have a rapidly changing dynamic agriculture, which is undergoing an irreversible, technological revolution. Our farm laws must be revised to cope with current conditions.

In January, the President again recommended to the Congress forthright changes in our farm price supports. He urged that price supports no longer be related to a standard 45 years old, but to a percentage of the average market price during the immediately preceding years.

If the Congress still prefers to keep existing parity standards, the President urged that the Secretary be given discretion to establish the support level for all commodities in accordance with guidelines fixed by law. This is now permitted for all of the 250 commercially produced commodities except for 16 for which supports are mandatory.

Either of these changes would be constructive. Under either course, the surplus could be reduced, the cost cut, production controls relaxed and markets developed. Our farm people could make more of their own decisions. The Government could resume its proper function of promoting farm research, expanding and developing markets, protecting soil and water resources, improving farm credit, and so on. We would help stabilize markets, not price ourselves out of them.

Congress recognized the need for farm program revision last year by passing the Agricultural Act of 1958. This act made some limited changes in the programs for corn, cotton, and rice. Now we need prompt and effective action in behalf of procedures of the other three basic crops, wheat, tobacco, and peanuts.

Wheat particularly is in an extremely critical position.

Either we must clamp down with more rigorous controls on wheat producers than we have ever had before—more controls than Congress has ever been willing to impose—or we must move toward market expansion and greater freedom to produce and compete.

More controls means stopping up the loopholes, increasing the penalty for overplanting, setting acreage and marketing quotas at levels that would balance supply and demand for wheat for dollars.

That is one approach—more controls—more regimentation.

Incidentally, if we followed the formula in the old law the national allotment for wheat this year would be zero, no wheat production at all.

A far better approach, I believe, would be to provide wheat growers with a program that moves toward freedom to produce and compete for markets.

The issue here is not a partisan one. The necessity cannot be denied. The economics is clear. Constructive politics can prevail. The issue is whether or not the Government's role with respect to agriculture is to be one that makes sense.

The American people deserve a program that makes sense. The poll I referred to shows that most of our farmers want it.

We must be on guard, however, lest the difficulties of the present program be used as an excuse to involve agriculture in something worse and in even greater trouble.

One bill now before the Congress is described as a measure under which "excessive and burdensome Federal control on agriculture will be eliminated, and under which American agriculture will be restricted to a free enterprise basis."

The words in this Talmadge-Brannan approach are appealing, but the reality is appalling.

This bill would provide for production payments on the basic crops.

In view of the facts available and the studies that have been made, I cannot see how such a plan can seriously be advocated unless as a political gimmick that might last for another election.

Studies by career economists show the production payment program could cost annually about $5.4 billion, for payments for the basic commodities alone. If expanded to all the major commodities, the cost would be well above $10 billion a year.

Congress refused to adopt such a program when submitted by my predecessor, Secretary Brannan. The scheme would:

1. Require drastic controls of production to keep costs within reason.

2. Limit opportunity of new farmers to enter into the production of these crops.

3. Unless extended to livestock (which would boost the cost even higher) it could create extremely serious problems for livestock, poultry, and dairy producers.

4. It would lead to international repercussions if U.S. surpluses were dumped on world markets.

5. Most fundamental of all, it would make farmers dependent for much of their income on direct payments from the Federal Treasury.

This would be a long step toward a fully socialized agriculture.

All this is not only the farmers' battle for realistic farm programs. It is the battle of every citizen—every businessman, every taxpayer, every housewife, every consumer, every person interested in the future of this country.

Our present costly farm programs contribute to unbalancing the budget—and this contributes to the threat of inflation. That is of utmost concern to every citizen. No Nation can go on indefinitely living beyond its income and cheapening the value of its currency.

I am intensely concerned about this. The course of inflation is subtle. Its ends are destructive. It mounts quietly, almost unseen in the short-term view, but it is utterly devastating over time.

The President has called for tight reins on Government spending, and for a balanced budget. He has called upon all of us, as citizens, for self-discipline in our economic actions, both as individuals and as groups. Government alone cannot win the battle against inflation. To win it—and we must win it—will require the united efforts of the American people, business, labor, banking, agriculture, and all economic groups.

Our expanding Federal Government has boosted the average family's tax bill from $120 to $1,600 a year. How much further can we go in this direction?

Many pressures are now being exerted to add more billions to Federal spending in the coming fiscal year, and beyond, billions that can bring on further deficits and inflation.

Contrary to what some people would have us believe, the Federal Treasury is not a bottomless grabbag which never needs to be conserved or replenished. To act as though there is no limit to what the Treasury can spend is an open road to the destruction of private enterprise, and its replacement by a socialistic economy.

I am firmly convinced that most Americans would never turn willingly to socialism. But a great many may unknowingly be led down that road by the lure of Government handouts, of deficit spending, of inflation, to the point where private enterprise is destroyed.

We cannot spend ourselves into prosperity. Nor can we preserve our prosperity and our free enterprise system by following a reckless policy of spending beyond our income in peacetime.

We must have a tax policy which is not confiscatory and a budget policy which prevents inflation. The Nation must have sound farm programs—just as it must have sound banking and finance—and sound wage and price policies.

The necessity for further revision of our farm programs is obvious. The direction in which we should go is clear. The economics of the farm problem are simple.

We need less Government in farming. Quit trying to fix prices unrealistically from which flow the twin evils of production for Government warehouses and Government control of farmers. Emphasize markets, increased efficiency, and competitive selling. Eliminate Government's stranglehold on agriculture.

This is the solution.

Congress must not postpone longer the action needed. The existing, outmoded farm laws must be changed. Until Congress acts, agriculture will be burdened with too much Government, too much politics, and too little commonsense.

The days ahead for America are sobering and challenging. They will demand the faith, prayers, and loyalty of every one of us. Our challenge is to keep this Nation strong—strong economically, strong socially, and above all, spiritually strong—if our way of life is to endure. There is no other way. Only in this course is there safety for our Nation. God grant that we may meet the challenge.

## The United Anti-Communist Action Committee of Western New York Honors the Honorable Kenneth B. Keating

EXTENSION OF REMARKS
OF
### HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. MILLER of New York. Mr. Speaker, my good friend, the distinguished junior Senator from New York [Mr. KEATING] was honored last Sunday in Buffalo by the presentation of a special plaque from the United Anti-Communist Action Committee of Western New York. This organization, a federation of a number of patriotic, civic, and nationality groups representing more than 100,000 members, has long worked to alert the American people to the dangers of communism and to the need to combat it by all means possible.

It is fitting that the committee should honor my colleague from New York, because for years he has been in the forefront of efforts to curb the international Communist conspiracy. The plaque, honoring the Senator for distinguished service "rendered in the eternal struggle for human liberty," recognizes his unremitting fight as a Member of both bodies of Congress against atheistic communism. It was awarded, in the words of the committee, in particular tribute to the Senator's "temperate yet determined efforts to strengthen our country's internal security and to enlist his countrymen's support and assistance in the cause of the miserable captives of Eastern Europe, a source of great strength for free America and of enervating weakness for imperialistic Russia."

The plaque was presented as the junior Senator from New York served as honorary grand marshal in Buffalo's famed St. Patrick's Day parade.

Mr. Speaker, I am pleased to call to the attention of this body this outstanding recognition of the great leadership of the gentleman from New York in the unending war against the machinations of the men in the Kremlin. My views on this subject are clear, and I look forward in the months ahead to working with my colleague from New York in this important work.

Because they are performing such a vital role in warning of the threat of communism and helping keep alive the flame of hope in the hearts of their friends behind the Iron Curtain, I want also to give suitable recognition to the members of the United Anti-Communist Action Committee of Western New York. The following list of the officers of this organization serves to underscore the broad scope of the groups it encompasses:

UNITED ANTI-COMMUNIST ACTION COMMITTEE OF WESTERN NEW YORK

Chairman: Francis M. Kindel, 139 Woodview Drive, Orchard Park, N.Y.; Erie County commander, VFW.

Vice chairman: Henry Marszalkowski, 57 Frederick; vice president, Polanie Cluc, Inc.

Legal counsel: Joseph McNamara, 63 Hedley Street; Erie County American Legion MO 3500; chairman, antisubversive committee.

Treasurer: Tibor Helcz, 27 Norwood Avenue, Buffalo, N.Y.; Hungarian Freedom Fighters.

Secretary: Kazimierz Jaszewski, 1104 Sycamore; Polish Combatants, World War II.

Police liaison: Emery Molnar, 739 Tonawanda; Hungary Freedom Fighters Club.

Public Relations Chairman: Walter V. Chopyk, 353 Herman; Ukrainian Congress Committee OFA.

TV Program Liaison: Dr. John Juhasz, 550 Dodge, president, Actio Hungarica; Casimer Jankowski, in care of Nowy Swiat, 1078 Broadway; Joseph Macander, president, Polish Combatants, 362 West Gate, Kenmore, N.Y.; Arthur J. Vater, 1616 Main, New York State Patriotic chairman, VFW; Nestor Procyk, 617 Humboldt Parkway, Buffalo, N.Y., Friends of Anti-Bolshevik Block of Nations; Gleeson Hupp, 93 Gresham Drive, Eggertsville, N.Y., commander, Erie County American Legion; Mr. Emergy Gaman, 104 Military Road, Hungarian Veterans; Romas Masiulionis, 56 Lovering, Buffalo, N.Y., president, Lithuanian Club of Buffalo; Richard Valdow, 229 Warren Avenue, Kenmore, N.Y., president, Estonian Club of Buffalo; Albert Strazdins, 533 Franklin Street, Buffalo, N.Y., Latvian Club of Buffalo; Mr. Giza Pokay, 851 Busti Avenue, Buffalo, N.Y., Hungarian Freedom Fighters Association; Mr. Zbigniew Piatek, 344 Woodlawn, Buffalo, N.Y., Polish Students Association; Wladtslaw Sulkowski, 227 East North, Buffalo, N.Y., Polish Air-Force Association; Mathew Hoykowski, 403 Sherman, Buffalo, N.Y., Polish Veterans Association; Allan Schihl, 81 Philadelphia, BE 7850, commander, Erie County Catholic War Veterans.

## The Cape Cod National Seashore

EXTENSION OF REMARKS
OF
### HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. BOLAND. Mr. Speaker, both my colleague from Massachusetts, Congressman O'NEILL, and I have joined together in introducing bills this year that would authorize the establishment of a Cape Code National Seashore on the Great Outer Beach of Cape Cod.

GREAT OUTER BEACH SHOULD BE PRESERVED FOR PUBLIC

The area that we have specified is one of the last great stretches of ocean front along the entire Atlantic and gulf coasts that has not given way to commercialization or private cottage development. We feel that it should be preserved for the public.

Two weeks ago the National Park Service issued a report, accompanied by beautiful brochures, proposing the establishment of a Cape Code National Seashore on the Great Outer Beach, as specified in the bills filed by Congressman O'NEILL and myself.

COMMENDS DIRECTOR WIRTH OF NATIONAL PARK SERVICE

Mr. Speaker, I want to commend Mr. Conrad L. Wirth, Director of the National Park Service, and members of his staff for the superb job they did in preparing their report on the Cape Cod National Seashore proposal, and for the publication of the interesting brochures.

URGES SECRETARY OF THE INTERIOR SEATON APPROVE PROPOSAL

The draft of the National Park Service report on the Cape Cod National Seashore proposal has been transmitted to Secretary of the Interior Fred A. Seaton for his review. Congressman O'NEILL joins me in urging the Secretary to study the proposal attentively and thoroughly, for we are sure he will agree with us that this is a proposal that has outstanding merit and should be approved by him and authorized by Congress.

CAPE COD SEASHORE SUPPORTED BY OUTSTANDING NEWSPAPERS

Mr. Speaker, I am sure that my colleagues and Secretary Seaton will be interested to know that the Cape Code National Seashore proposal has prompted very favorable editorial comments from outstanding and well-respected newspapers, including the New York Sunday Times of March 15, the Springfield (Mass.) Union of March 12, the Boston Herald of March 13, the Providence (R.I.) Journal of March 14, and the

Christian Science Monitor of March 13.

Mr. Speaker, under unanimous consent, I include these editorials with my remarks:

[From the New York Times, Mar. 15, 1959]

PRESERVING CAPE COD

There is much that is meritorious in the proposal of the National Park Service that the Atlantic Ocean front of Cape Cod be turned into a national seashore, a permanent noncommercial area designed as a national park. It would cost several million dollars to acquire all the privately owned property on this 40-mile stretch of beach, but it could well be a national investment worth many times its expense.

When we think of conservation and parks we usually think of woodland and mountain. That is natural, and what has been done has won the approval of most thinking persons. Our country and our society are richer for what has been wisely preserved. We are justifiably proud of our Yellowstone and Yosemite.

But, on a much more modern scale, it may be possible to keep in its integrity some other area that has a unique esthetic and historical value. We shall be poorer, indeed, if this Atlantic shoreline is gradually inundated, not by the waters of the sea, but by the march of commercial establishments which, however justifiable in themselves, can do damage to an artistic whole that is and should be a part of our national cultural inheritance.

Cape Cod is unusual in many ways. It can continue so to be, if it is not reduced to some sort of lowest common denominator in our culture pattern. It can be an unusual national monument if we have the right sort of imagination at the right time.

---

[From the Springfield (Mass.) Union, Mar. 12, 1959]

CAPE COD PARK

The National Park Service has given an inspiring lift to the hopes of those whose goal is to preserve the irreplaceable natural beauties of Massachusetts in its decision to recommend the establishment of a 29,000-acre national park along the greater outer beach of Cape Cod. The park, segregating tracts of mostly undeveloped land in Truro, Wellfleet, Eastham and Orleans, would stretch about 30 miles between Chatham and Provincetown; it would protect from future exploitation a coastal area of surpassing charm and of incalculable value as a natural endowment in the Commonwealth.

As in all proposed projects of its kind, the element of time is paramount. Commercial and residential development has encroached in many sections of Massachusetts, preempting the values of a native scene which is an inestimable asset esthetically, and economically as an important part of the State's attraction for tourists. If the asset is not conserved by government—State or Federal—private development is bound to expand. The problem is to embrace such lands in the public domain before private owners either sell out or develop the tracts themselves, thus making their loss to the people well nigh irrecoverable. The same pressure for fast action applies to the large acquisitions contemplated by the Commonwealth.

Massachusetts does not have a national park. The great outer beach appears ideally suited for the purpose. We earnestly hope that the commission's recommendation is translated into action, thus completing a major phase of the Massachusetts conservation program.

---

[From the Boston Herald, Mar. 13, 1959]

CONSERVING THE CAPE

The National Park Service's report recommending creation of a 30,000-acre national park on Great Outer Beach at Cape Cod is welcome, if somewhat belated. Representatives BOLAND and O'NEILL, sponsors of legislation to establish such a park, should be congratulated for having spurred the report along.

But the real job remains to be done, and it cannot be done by the Congressmen alone. The Interior Department and Congress still have to be sold on this magnificent plan. The proposed park, as the National Park Service noted, would be within a day's travel for nearly a third of the country's population. People from all over the eastern part of the Nation should support the plan:

This is what is at stake:

The Great Outer Beach area can become, under the National Park Service plan, a perpetual source of enjoyment to all Americans who treasure natural beauty.

Or, it can become one great slum of jammed-together houses and hot dog stands and barrooms, bringing temporary prosperity to a few individuals but leaving an ineradicable heritage of blight to future generations.

---

[From the Providence (R.I.) Journal, Mar. 14, 1959]

THERE STILL IS TIME TO SAVE THE BEAUTIES OF THE CAPE

The National Park Service, undaunted by the rebuffs it has suffered over the years, once more is proposing that the unspoiled outer beaches of Cape Cod be acquired for a Federal park.

Prompt action is required. "Even now," the Park Service reports, "the still unspoiled Great Beach is vanishing under building. It is time to set aside, preserve, and protect the last of the 'old' Cape so that the inspiration of its surpassing beauty can be kept intact and handed down to future generations of Americans."

Anyone familiar with the record knows what is happening. Back in 1935, the Park Service studied 12 major strips of seashore along the Atlantic and gulf coasts. It urged that they be acquired as Federal parks before it was too late. Only 1 of the 12 was acquired—the 70-mile stretch at Cape Hatteras. Of the others, 10 now have become so thoroughly commercialized that Federal acquisition is out of the question.

Anyone familiar with Cape Cod knows what is happening there. Paved highways have been laid on what were sandy roads. Motels have appeared in meadows and dance palaces on sandy dunes, while the mushrooming pizza palaces and hotdog stands are destroying the natural vista of pine, dune, and sea.

Thoreau once said of the cape's outer beach that "A man may stand there and put all America behind him."

A man may still achieve that splendid feeling of isolation here and there along the outer beach. But the cape isn't the isolated region it was in Thoreau's day. The automobile makes it only a day's drive from New York. The jet airliner puts it only an hour or so away from Washington, Pittsburgh, or Buffalo. The encroaching fingers of commercialism inevitably are creeping on. Unless checked, they will destroy the charm and character of the cape as surely as they have destroyed the character of so many other places.

The Park Service proposes that 28,000 acres between Provincetown and Chatham be taken over as a Federal park. It estimates the acquisition cost at $16 million. Within the boundaries of the park, bathing and camping facilities would be provided. But commercial activities would be kept at a minimum and every effort would be made, as in all national parks, to preserve the natural character of the area.

A bill was introduced in Congress last year to establish the new national park. It died in committee, but has been reintroduced this year. The Massachusetts Legislature last April approved the acquisition program.

But elsewhere there is a wide difference of opinion about the project. Residents of the cape are divided. Those with commercial interests generally are opposed to the park program; those who are more disturbed by the changing character of the cape are generally in favor. The Congressman who represents the cape, Representative HASTINGS KEITH, wants more time for study before taking sides. Neither Senator LEVERETT SALTONSTALL, Republican, of Massachusetts, nor Senator JOHN F. KENNEDY, Democrat, of Massachusetts, has taken a position.

Clearly the project will require far more support than it now is receiving, both from the political leaders and from the citizenry, if it is to stand a chance. It is a choice of acting now to preserve one of the last available stretches of Atlantic seashore, or of letting the opportunity slip away forever. And time is running out.

---

[From the Christian Science Monitor, Mar. 13, 1959]

WHERE THE GREAT BEACH BELONGS

Congress, 22 years ago, authorized creation of a national seashore comprising tempestuous Cape Hatteras, strewn with centuries of the wreckage of ships. Largely purchased by private and local funds, the remote and inaccessible reservation did not attract national attention.

Four years ago, and financed by an unidentified "friend of the National Park Service," that agency published an arresting report, "Our Vanishing Shoreline." Americans were placed on notice that while they might have their Yellowstones and Yosemites, the seashores were almost no longer theirs, but captured by private owners for everything from great hunting and fishing estates to weekend cottages.

Today the Cape Hatteras National Seashore Recreational Area has been established and is being administered as a national park. It extends 70 miles along the Outer Banks, and preserves some of the most spectacular seashore scenery and the rarest wildlife in America.

And now the National Park Service is broaching the idea of another national area along the entire Atlantic front of Cape Cod, rivaling Cape Hatteras in natural treasures and in tragic but inspiring human history. Here is the shoreline Henry Thoreau named the Great Beach, and of which he said:

"A man may stand there and put all America behind him."

May this vision of another seashore preserved for the people be not long in fulfillment.

---

## Action, Not Talk, in Education

---

EXTENSION OF REMARKS

OF

## HON. WILLIAM J. RANDALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. RANDALL. Mr. Speaker, we here in America hear a lot to the effect that there is not enough money appropriated for, nor enough emphasis placed upon the education of our youth. There results charges and countercharges being thrown back and forth much like a tennis ball being batted back and forth between two tennis players. Whether these differences in viewpoints will be resolved in this or a subsequent session of this Congress, and whether or not the facts will be so conclusively established that there may come to pass some Federal assist-

ance to the schools of our country without restrictive punitive provisions, no one can foretell. Notwithstanding, there is a sidelight to this whole matter of youth education which came to my attention in the city of St. Louis on Saturday, March 21, 1959, which I think is worth making known by an entry in the CONGRESSIONAL RECORD.

There in St. Louis at a regional conference of delegates of the United Steel Workers of America, involving several States, I witnessed the award of several scholarships by that organization which to me was both a refreshing and a delightful experience.

For the reason that I had not theretofore known of the existence of these scholarships provided by these trade unions and for the further reason I am of the belief there may be many others not advised of this effort by trade unions to make a separate and additional contribution over and above their other well-known efforts in the field of education, I thought it would not be anything but appropriate that the following observation be entered, describing what I saw and heard, and to provide you with a few of the details that may be interesting concerning the plan and its operation as follows:

It is generally recognized that America's trade unions have been in the forefront of efforts to establish and strengthen universal free public education for our children. But not too generally known is the fact that most legitimate trade unions today express a continuing interest in the education of our youth beyond the high school.

A good example of how labor groups help in a meaningful and effective way in the education of our children can be found in the Kansas City area which counts among its residents a substantial number of members affiliated with district 34, United Steelworkers of America, AFL–CIO. This union, for 11 years now, has been making available to the high school graduates of steelworker families an annual scholarship which enable a student to complete 4 years of college or university training. Two such awards in this district are offered every year and the value of these scholarships has just recently been raised to $4,000 for each recipient.

This is not a narrow, highly restricted award. Winners are chosen by an impartial panel of educators from a prominent university on the basis of a competitive examination. Those given the scholarship are free to pursue higher education in any accredited college or university of their own choosing. Furthermore, they are free to select a course of study leading to a bachelors degree in whatever field they desire.

One of the two awards given by this union in 1959 is going to Gary Paul Agin, the 18-year-old son of Mr. and Mrs. George Agin, 6642 Indiana Avenue, Kansas City, Mo., whose score in the examination was among the upper half of 1 percent of all recent college entrants. Young Agin became eligible to compete for the scholarship because his father is employed at the Sheffield Steel Co. in Kansas City and he has been a member of local 13 of this union for the past 22 years.

Indicative of the scholastic aptitude of this young man is the fact that he has an enviable record of achievement as a student at the Southeast High School in Kansas City, Mo. He is a member of the National Beta Club, a national honor society organization, and was a finalist in the national merit scholarship competition. Additionally, Mr. Agin is the editor in chief of his high school annual yearbook "The Crusader." He has also served as president of the high school debating club and in his junior year at this school was the winner of a University of Washington achievement award. This youngster's interest in worthwhile things extends beyond the school and into the community. He is a junior deacon in the Central Christian Church of Kansas City and a cochairman of the Teen Town Committee, a young people's organization devoted to teenage social activities.

Now that this promising young man has the resources to continue his education he is planning to attend the University of Kansas and major in engineering physics. While the parents of this student would have made any and every sacrifice to secure for their boy a good education, they are doubtful that this would have been possible without the substantial help provided by this generous scholarship. It is a fact that the great majority of those receiving this award would have been unable to continue their education without the financial help accompanying the award.

This is a fine example of labor's deep and abiding interest in the educational welfare of our children, but it is not at all unique. Similar scholarships are offered to high school students in almost every other district subdivision of the union. Moreover, hundreds of smaller but equally important scholarships are provided by local union affiliates of the United Steelworkers of America. Together, these contributions toward the education of our youth represent a very significant and noteworthy step toward the growth and development of our future citizens.

---

## The Institute of Fiscal and Political Education

EXTENSION OF REMARKS
OF
## HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ARENDS. Mr. Speaker, I believe the Congress and the country as a whole should become better acquainted with the splendid work of the Institute of Fiscal and Political Education.

This organization has been performing much needed work for the advancement of education with respect to the merits of democracy as against communism.

Among other things, they have published a book entitled, "Democracy Versus Communism," which has received commendation throughout the country. The book is utilized in the form of pamphlets by our armed services.

I am inserting in the RECORD some extracts from editorial comments by various newspapers and magazines on the book and opinions expressed by individuals and private organizations with respect to it.

It follows:

The Tablet, a Catholic weekly, Saturday, December 7, 1957: The best treatment of democracy and communism in this century. "Above all, 'Democracy Versus Communism' presents an honest picture so that students, and indeed all citizens, can make an informed, reasoned choice between democratic and totalitarian governments."

Gen. John E. Hull, Commander of forces in Far East, Korean war, in the Sunday Star, Washington, D.C., December 1, 1957: "Korea proved the need. America's schools * * * had failed to teach effectively what America stands for and what communism stands for."

The Saturday Evening Post, December 28, 1957: "It's time our children were taught the facts about communism. The men who had been prisoners of the Communists in Korea and China, those who in various degrees cooperated with the Communists, were boys who knew almost nothing about communism and hardly more about their own system."

Columnist and lecturer Herbert A. Philbrick, in the New York Herald Tribune, Sunday, January 5, 1958: "I have before me a most remarkable new book. The first of its kind ever published in the United States. It is a textbook on democracy and communism * * * and it tells the truth about both. The next job is * * * to see that every student is properly equiped with knowledge of the most dangerous enemy ever to challenge our way of life."

NAM News, National Association of Manufacturers, January 3, 1958: "Planned especially for high school students, but recommended reading for everybody."

Letter from John R. Miles, manager, Education Department, of Chamber of Commerce of the United States, December 26, 1957: "My congratulations on the editorial in the current issue of the Saturday Evening Post, as well as on the textbook you published on 'Democracy Versus Communism'.

"Dr. Emerson P. Schmidt and I have read it through and both of us heartily approve of the attitude taken toward communism as well as toward our own free market economy."

Hon. Herbert Hoover: "I am glad to have the book. I am glad you have done it."

RICHARD NIXON, Vice President of the United States: "I am sure that this book 'Democracy Versus Communism' will serve a most useful function in helping to educate our young people concerning the basic principles in which we believe, and the nature of our enemy."

J. Edgar Hoover, U.S. Department of Justice: "America must have an informed citizenry. Our young people need to be taught the difference between the treasured values of democracy and the deceit and falsehoods of atheistic communism. Democracy stand for freedom, justice, and fair play; communism for terror, injustice, and slavery. Our youngsters will be our leaders of tomorrow. To nurture them in the hopes and ideals which have made our Nation great is our best guarantee that freedom shall continue to ring in America."

Lewis L. Strauss, Chairman, U.S. Atomic Energy Commission: "'Democracy Versus

Communism' is a valuable weapon, for it has the sharp blade of truth."

Harold C. Lyon, colonel, Department of the Army (Chief of Troop Information Division): "The Institute of Fiscal and Political Education should be very proud of what they have done in the sponsorship of this marvelous publication, 'Democracy Versus Communism.' It truly is an outstanding publication which fills a definite need in the secondary school level. I firmly believe that we should carefully consider some form of distribution, or utilization at least, of this publication within the Army within the field of troop information."

Associated Press dispatch from Indianapolis, November 21, 1957: "The American Legion today reversed its long-standing policy against teaching anything about communism in public schools.

"Along with the pro-American study courses the Legion has long advocated, its Americanism commission proposed instruction to expose the fallacies of communism."

## National Chiropractic Association Sponsors National Correct Posture Week, May 1-7

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. FLOOD. Mr. Speaker, the health of a nation can be evaluated in a number of ways. However, the true test of whether or not a nation is healthy rests on the theory of the "chain is only as strong as its weakest link"; that is, the health of a nation can only truly be determined by the health of the individual citizen.

Contributing greatly to the health programs in this country is the National Chiropractic Association. The NCA is an organization devoted to professional advancement and high ethical standards and is the sponsor of National Correct Posture Week which is observed during the first week in May of each year.

One of the mottos of the National Chiropractic Association is: "Stand Tall, Sit Tall, Walk Tall, Sleep Tall, and Think Tall." How very significant these words are. This little motto easily can serve as a guide and an admonition to the individual to seek the path which is not that of least resistance in order to attain improved and better health—from physical, mental, and spiritual standpoints.

The importance of good posture can never be underestimated. In my own daily contacts with individuals in all walks of life, I have witnessed the blessings of good health, and I have also viewed the tragic results that abuse and neglect have wrought upon the human body and mind.

It is only an observation, of course, but I would say that a great share of the misery and suffering in this Nation today is an indirect result of poor posture because bad health often results from the failure to learn and practice habits of correct posture.

The role of the National Chiropractic Association in observing Correct Posture Week assumes vital importance when we consider the well-being of our citizenry. The NCA program of devoting a week to remind us all that long life and sound health demand correct posture is one that deserves the support of all Americans.

There is no question of the significant contribution to national health and welfare that is being made through observance of National Correct Posture Week. Benefits accrue to all who participate in these programs.

But the contributions of the National Chiropractic Association are not measured alone in the fostering of this week-long health program. The NCA believes that health of mind, body, and soul deserves public consideration every day of the year.

How the National Chiropractic Association is cooperating in efforts to promote good health constantly is demonstrated in the remarks of Dr. Shane MacCarthy, executive director of the President's Council on Youth Fitness in his invitation to individual members of the NCA to participate in this program following acceptance by the organization. His remarks follows:

The members of the National Chiropractic Association have an important role to play in their own local communities with the families and individuals who make up the Nation's communities. Among the many professions that provide services to people are the doctors of chiropractic whose main function is to keep people fit by helping individuals to maintain an optimum of health.

We welcome the support and cooperation of the National Chiropractic Association in our efforts to improve, expand, and implement the activities which promote fitness—with its mental, emotional, social, spiritual, as well as physical aspects. This can be done through the individual determination on the part of all members to take positive action in the local fitness programs for the youth in each community. Won't you help in this important program?

At this point, Mr. Speaker, I ask unanimous consent to have printed in the RECORD the excellent statement of Dr. Emmett J. Murphy, of Washington, D.C., director of industrial relations of the National Chiropractic Association.

Dr. Murphy, who is the author of a number of outstanding articles and reports on physical fitness, and has had the benefit of years of personal experience in the health field, discusses the importance of National Correct Posture Week and the contributions of chiropractic.

The article by Dr. Murphy follows:

POSTURE: AN OPEN DOOR TO HAPPY, HEALTHFUL LIVING

The National Chiropractic Association, in pioneering the observance of National Correct Posture Week, sponsored annually May 1 to 7, has dedicated the talents, ingenuity, and energy of its membership to fulfillment of the fundamental precept that correct posture will pay health dividends.

During Correct Posture Week, doctors of chiropractic devote their attention to telling the story of their profession to the public. This is done for one purpose: We believe good posture and good health go together. And what is true for good posture, is equally applicable to the opposite extreme. Poor posture is not only expensive, resulting in lost days of work, but it may eventually lead to a shortened life.

Our goal during this observance is to relate the story of good posture and its beneficial results to every American, and in this we join in the promotion of sound health practices with every branch of the healing arts.

The standards of our national health cannot be minimized. This is demonstrated by the many agencies of our Federal Government which have been forthright in their advocation of correct posture as a necessary step toward attainment of sound health and long life.

The Armed Forces, for example, stress correct posture in all duty activities. They teach correct posture as a means of physical, mental, and emotional well-being.

Other Federal agencies, too, have long been leaders in the campaign to keep Americans posture conscious. For instance, the Children's Bureau and the Women's Bureau of the Department of Labor, the Federal Security Agency, the White House Conference on Child Health are but a few which could be listed.

SPOKESMEN AGREE

Good posture means much more than simply standing straight. Good posture is that position of the body in any activity in which all of its parts are working effectively and with proper balance, ease, and comfort.

On this one point all spokesmen of all branches of human endeavor have agreed for hundreds of years that correct posture is one of the most important paths to good general health.

This viewpoint is shared by medical and chiropractic authorities, public health workers, nurses, psychiatrists, the armed services, pediatricians, and specialists in industrial relations.

TEST YOUR POSTURE

Good posture is a result of holding your body in a balanced position. The easiest way to attain it is to think of an imaginary line running—side view—from the tip of the skull through your neck, shoulders, hips, knees, and insteps. When the head is bent forward, the abdomen thrust out, or the back bent, the line of gravity is shifted, and a strain placed on muscles to keep the body from falling.

To test: Stand with back to wall with head, heels, shoulders, and calves of legs touching it, hands by sides. Flatten hollow of back by pressing buttocks down against the wall. Space at back of waist should not be greater than the thickness of your hand.

Stand facing close to wall, palms of hands touching front of thighs. If chest touches wall first, your posture is probably excellent, or at least good; if head touches first, it is only fair; if abdomen touches first, your posture is really bad and you should see a doctor of chiropractic.

STANDING

When you stand straight your head should be balanced and erect. Your shoulders are relaxed and low; your chest is held high. Your lower back should curve to just a slight degree. Your abdomen should be flat. Have your knees straight but not stiff, and feel your weight in the outer borders of your feet.

SITTING

You should sit with your feet flat on the floor. Do not slump in a chair, but keep your back straight and your abdomen flat. As in standing, your head should be erect and well balanced. When you lean forward, lean from the hips, not from the waist.

WALKING

Movement should start at the hips. Your head and upper part of your body should remain at right angles to the ground. Swing your arms freely. Look ahead, never down.

Point your toes straight ahead. Knees should be relaxed and free.

OFFICIALS ENDORSE POSTURE WEEK

The excellent assistance of school teachers and school authorities, of State legislatures, of governors and mayors, of Members of the United States Congress, and of the people themselves has made National Correct Posture Week an increasingly important observance.

More and more officials at the city and State level proclaim its observance officially every year.

The active members of the National Chiropractic Association lead in observance of National Correct Posture Week, because the science of chiropractic is dedicated to the elimination of postural faults which rob human beings of the health they should have.

SECOND LARGEST HEALING PROFESSION

Chiropractic, as an organized professional body, is 64 years old, and now ranks as the second largest healing profession.

Licensed by law in 44 States, the District of Columbia, Hawaii, Alaska, Puerto Rico, and 7 Provinces of Canada, there are some 25,000 doctors of chiropractic in the United States (against a population of 170 million) and 1,030 in Canada (against a population of 17 million).

Chiropractic is an established but growing and dynamic profession, which has adopted high professional standards and ethics through formal action of the National Chiropractic Association.

Officials of the National Chiropractic Association believe it to be the most democratic professional body in the United States. It employs no sanctions of legal or economic force against nonmembers and strives to achieve its goal of professional unity through education and in a manner discussed and approved by the national membership.

FOUR-YEAR COURSE IS EDUCATION STANDARD

Chiropractic colleges are required to give 4,000 academic hour in a standard 4-year course to obtain accredited ratings from the Committee on Educational Standards of the National Chiropractic Association. A basic course of 4,400 hours is recommended.

Up to 2 years of preprofessional (college) education is required by State chiropractic laws of licensure. A large percentage of students entering approved chiropractic colleges today have college degrees.

CHIROPRACTIC COMPARES WELL

In every way chiropractic, as a healing profession, compares well with other professions.

Sound chiropractic education is encouraged not only by the national council on education of the National Chiropractic Association but also by the student loan fund and other devices designed to provide aid for gifted students.

BASIC CURRICULUM

The following typical or basic curriculum for approved chiropractic colleges is based on the National Chiropractic Association code for a minimum of 4,000 hours in a 4-year course:

| Subject: | Hours |
|---|---|
| Anatomy, including embryology and histology | 740 |
| Physiology | 240 |
| Biochemistry | 180 |
| Pathology and bacteriology | 520 |
| Public health, sanitation, hygiene | 160 |
| Practice of chiropractic (principles and technique, neurology and psychiatry, pediatrics, dermatology, urology, ophthalmology, otolaryngology, first aid and minor surgery, roentgenology) | 1,960 |
| Obstetrics and gynecology | 200 |
| Total | 4,000 |

## Boland Cites Burgeoning Metropolis Problems

EXTENSION OF REMARKS

OF

## HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. BOLAND. Mr. Speaker, for many years now municipal officials and civic groups have been facing up to one of the major problems of our times, namely, burgeoning metropolises and beautiful suburbs that leave in their wake slums in the heart of the old cities and myriad highway, parking, sanitation and housing problems.

HIS CITY OF SPRINGFIELD PARTICIPATING IN URBAN RENEWAL

Several years ago Congress authorized the urban renewal programs to give the cities Federal assistance in coping with these problems. My own home city of Springfield, Mass., is now in the midst of an urban renewal project which will be of tremendous benefit, not only to the north end clearance section in Springfield, but to the entire Greater Springfield area.

SYMPOSIUM AT MOUNT HOLYOKE COLLEGE ON PROBLEM

Last weekend, on the Mount Holyoke College campus in South Hadley, Mass., a most timely and successful symposium was conducted under the joint auspices of Mount Holyoke College and Time, Inc., on the subject "Tomorrow's Cities: Plan or Chaos?"

Among those participating were Norman P. Mason, Administrator of the Housing Home and Finance Agency; Mrs. Kathryn H. Stone, a member of the Virginia House of Delegates; William J. Whyte, Jr., editor of the Fortune magazine series "Exploding Metropolis"; Prof. Reavis Cox of the Wharton School of Finance and Commerce; and Mayors Samuel Resnic of Holyoke, Mass., Thomas J. O'Connor of Springfield, and James Cahillane of Northampton, Mass.

Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the following newspaper account of this symposium, written by Miss Anne Buffington for the Holyoke Transcript-Telegram of March 21:

ELEVEN HUNDRED ATTEND MOUNT HOLYOKE TALK

(By Anne Buffington)

Blighted, suffocated, strangled, inadequate, obsolete, congested, monotonous, unlivable, unworkable, and ugly.

These are only a few of the uncomplimentary labels pasted on American cities by members of a Mount Holyoke College-Time, Inc., symposium, discussing "Tomorrow's Cities: Plan or Chaos?"

The session began Friday evening with a consideration of "What's Wrong With Our Cities" and concluded this morning on the more hopeful note of "What We Can Do About It."

An audience of about 1,100 attended the Friday meeting. The group included Mayors Resnic, Thomas J. O'Connor of Springfield, James Cahillane of Northampton, plus a sizable delegation of planning board and renewal authority members, and other civic leaders from Holyoke and area cities.

James W. Rouse of Baltimore, national president of ACTION, served as moderator and outlined the paradoxical problem of American cities as he sees it: "Here we are living in an era of peak prosperity with an all-time high living standard. And yet, with the urbanization rate moving steadily up, not one American city has been able to come up with a plan which can keep pace with the city's deterioration."

Vernon De Mars, California architect and professor of architecture at the University of California, and introduced by Rouse as "the humanist of modern housing," contended that Americans have "given up the idea of the city as a desirable place to live."

"The city has come to represent the tangled jungle of business and commerce, without time or space for beauty. They escape to ranch house openness, only to find all the other escapees hemming them in."

De Mars complained that financers of mass housing or renewal projects are just beginning to listen to the architect's plea that useful, practical buildings can also be beautiful. "They're only now beginning to realize that esthetic considerations pay off."

William H. Whyte, Jr., author of "The Organization Man" and editor of Fortune magazine's "Exploding Metropolis" series, said he fears that, concurrent with the exodus of suburbia, there has been a "blurring of urban with suburban values" and a transference of urban-suburban functions out of their proper spheres.

He particularly attacked large middle-income housing projects as "institutional in design and institutional in management" and "designed for people living somewhere else."

Whyte called for immediate action on problems of the cities. "We have the diagnoses well in hand, but no steps have been taken.

"Planners are so bemused by the idea of a master plan—the big picture—they fail to make any start on the ground level," Whyte said.

Victor Gruen, senior partner of Victor Gruen Associates, an architect and planner, pointed to conspicuous space consumption which has traditionally gone on in the United States, where land shortage has become a real problem.

He singled out the automobile as one of the most vicious land grabbers in modern America. "What has the automobile done to us?" he wondered. "It has distorted our values to such an extent that cities are now serving highways instead of highways serving cities. We're planning our future in terms of traffic density predictions instead of the only valid yardstick, human happiness and enjoyment."

Both Reavis Cox, professor of marketing at Wharton School of Finance and Commerce, and Norman P. Mason, Administrator of the Federal Housing and Home Finance Agency defended businessmen who came in for abuse from some of the panelists.

Mason says that where the planners have come up with good ideas for cities, only the businessmen have been able to realize them in concrete and steel.

Cox pointed out the difficulty of dealing with concepts of beauty in a democratic society. "What most of the people think is beautiful is what the planner will have to give them—whether the planner thinks it's beautiful or not."

Mrs. Kathryn H. Stone, a member of the Virginia House of Delegates and board member of ACTION, and Whyte came to the defense of zoning regulations, characterized as a stumbling block in the renewal process.

Zoning, they say, was the first tangible step in the direction of planning in the 1930's and 1940's. The trouble is that zoning has failed to keep pace with technological and population expansion, becoming frozen.

"What a mess we'd be in if we hadn't had zoning." But technological progress has made many zoning concepts obsolete and the regulations remain—frozen and sacrosanct.

The panelists generally agreed that planning groups have been delegated sufficient authority to proceed with renewal programs but that timidity and apathy have prevented them from going boldly forward with their paper and model plans.

They also felt that politicians would be responsive to real citizen interest and demand that something be done about the cities.

Rouse concluded the evening session with an appeal for the citizens to take an active part in the recreating of their cities instead of sitting idly by and watching them deteriorate.

At the morning session, Gruen gave his audience a startling view of the future city based upon a new philosophy of planning. The demonstration included slides of architect's pioneer shopping center outside Detroit and his monumental renewal plan for Fort Worth, Tex.

Basic principles of the design include cluster planning, outlying areas separated from the hard core of downtown by winged highways, and pedestrian islands.

The plan would eliminate all vehicle traffic from downtown areas, leaving streets free for expanded building and pedestrian parks. Walking distance from parking areas at the edge of the downtown area to its center are estimated at 2½ minutes. The plan would utilize existing buildings and roads and will not require demolition of any major buildings in downtown Fort Worth. The city has accepted the plan and is moving ahead with it.

Mason discussed urban renewal programs under which Federal funds are funneled to communities which will seize initiative and come forth with workable programs.

DeMars called for variation in housing design in particular areas and a relaxation of zoning requirements which "regulate monotony."

To combat urban sprawl Whyte proposed community purchase of development rights in areas which should be consecrated to open air.

Professor Cox felt the common denominator in planning problems is "what do people do?"

Any plans he felt, should tie the city together on the basis of how often people meet. He also cautioned planners against a God complex.

"How presumptuous of us to dictate to future generations where they're going to live. They will live where they want."

## Panama Canal: Self-Sustaining Interoceanic Public Utility

EXTENSION OF REMARKS
OF
### HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. THOMPSON of Texas. Mr. Speaker, in January 1949, while a member of the Committee on Merchant Marine and Fisheries, I was designated by Chairman Schuyler Otis Bland of that committee as chairman of a special subcommittee to investigate the financial operations of the Panama Canal.

The ensuing inquiry resulted in the enactment of Public Law 841, 81st Congress placing the Pamana Canal enterprise on a self-sustaining basis and bringing about the first major reorganization of its administrative setup subsequent to opening to traffic in 1914.

Thus, I read with the keenest interest a news story by Ralph K. Skinner on the Panama Canal in the March 21, 1959, issue of the Christian Science Monitor commenting on its financial operations and quoting some statements of Gov. William E. Potter relative thereto.

Because the indicated news story is extremely pertinent to current discussions of the canal question in Panama and elsewhere, under leave accorded, I quote its text:

PANAMA CANAL TIED TO SERVICE

(By Ralph K. Skinner)

ANCON, C.Z.—World shipping was stoutly defended by Canal Zone Gov. William E. Potter in his remarks on profits and tolls at the Panama Canal in an address to a meeting of financial management personnel here recently.

Attendants at the meeting said the Governor made evident his refusal to let political and vested economic interests interfere with the Panama Canal concept of service to the world. This concept is simply stated on the canal seal in the words, "The land divided. The world united."

"The aim of the Panama Canal Company is not to make a profit but to avoid a loss," explained Governor Potter who is also President of the U.S. Government-owned Corporation which operates the waterway.

He added, "The law requires us to be self-sustaining and I don't intend to become a lawbreaker."

The Governor detailed the expenses which in fiscal year 1958 whittled the canal's $83 million gross revenue to a net income of $2,600,000.

TARGET SEEN

He commented that there are many who cannot get away from the idea that the canal should be a moneymaker; that it should make a profit and the bigger the better. The Governor declared positively that "the Panama Canal was not intended to be a moneymaker for Uncle Sam—nor for anyone else."

This statement was seen to be directed at certain high Panama officials who wish to see the revenue of the Panama Canal increased because they have hopes of their Government sharing in it.

For example, former Foreign Minister Acquilino Boyd recently told the National Assembly that the Panama should receive 50 percent of the Panama Canal's gross revenue.

While not officially admitted, this is seen to be emerging as Panama's national policy. Highly placed official are making this assertion to the people of Panama, and there is no official repudiation of the assertions. Two officials of Cabinet rank have told this correspondent that Panama should receive at least a 50-percent portion of the revenues of the Panama Canal because Panama and the United States are equal partners in the enterprise.

In addition, there are many officials who profess to believe that Panama can and should nationalize the Panama Canal.

VIEW REJECTED

The Governor told his audience that the Panama Canal was built as a service to the shipping of the world. Although the maintenance of the facility requires considerable expenditure, the extent of the expenditure is exactly governed by the need.

Governor Potter said, "I must reject any philosophy which infers that there could be more pay merely by raising tolls; that there is a throttle for the extraction of cash that should be tightened until the victim squeals, merely for the fiscal satisfaction of a few.

"I can foresee that the needs of future shipping may require expenditures that would require modest tolls increase but tolls should be increased for that reason alone and not for income as a sole reason."

This correspondent has been told by cabinet officials of Panama that they would immediately press for higher tolls in the event of (1) nationalization of the Panama Canal, and (2) any Panama participation in the management of the waterway.

Summing up, Governor Potter said, "Let me then state my philosophy: The job of tolls is to pay for the operation, maintenance, and improvement of the facility it uses—all of that, nothing more."

COUNTER TO DEMANDS

Although there was no reference to Panama made in the talk, many listeners interpreted the speech as a counter to Panamanian demands for a 50–50 participation in the gross receipts of the Panama Canal. The Governor listed the canal's gross receipts as $83 million in fiscal 1958. Some $43 million was tolls income, and $40 million came from supporting service organizations, he said.

Biggest single cost, he said, was $39 million for personal services and allied costs. Then came $13,300,000 for costs of goods sold, $5,200,000 for depreciation, and $3,500,000 for operating material and supplies.

It was pointed out that right here is the end of computation for some critics of the Panama Canal. Actually, there are two major costs remaining.

First is the net cost of Canal Zone Government amounting to $10,700,000 for fiscal 1958. Second is the interest on the net investment of the U.S. Government in the Panama Canal enterprise, which was $8,800,000 in fiscal 1958.

COSTS EXPLAINED

Subtracting all of these costs, the net income of the Panama Canal Company for the year was $2,600,000. This is considered rather picayune in proportion to the canal assets of more than half a billion dollars. But, as the Governor said, "The canal aims not to make a profit but to avoid a loss."

For those not familiar with the situation, the Governor explained that the costs of Canal Zone Government included all elements which are a normal part of community life in the United States. This includes roads, highways, sewers, police and fire protection, educational and health facilities, prisons, jails, garbage collection, and so forth.

None of these facilities would exist in the Canal Zone; indeed, the Canal Zone itself would not exist, if it were not for the Panama Canal.

Therefore Congress has decreed that the Panama Canal Company, operating the waterway, shall pay the net costs of Canal Zone Government yearly.

## So-Called Fair Trade Is Unconstitutional

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, the Fair Trade Act (H.R. 1253) violates free enterprise by limiting or eliminating competition. The manufacturer can set prices on the sale of his product by the retailer, providing that Congress sets aside the antitrust law. This in itself is strange since the purpose of antitrust law is to protect businesses and consumers by preventing price conspiracies. Fair trade has been called unconstitu-

tional by many States. Now the question facing Congress is the question brought up by fair trade. Can Congress constitutionally delegate power to private persons, granting to a certain class of citizens privileges not equally given to all citizens. The constitutionality of the act has never been squarely tested in the Supreme Court.

Maybe it is time we stopped letting the Court interpret and define our intent. Let us reaffirm our belief in free enterprise and antitrust protection—not accept price fixing and the planned economy of H.R. 1253, the so-called fair trade bill.

## Control of Weather Could Win War

EXTENSION OF REMARKS
OF
### HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. OLIVER. Mr. Speaker, if anyone had mentioned only a few months ago, the possibility of using the oceans to control the weather, we would have thought that the man was insane. But today, after the launching of space satellites and with the talk of man's first trip to the moon, nothing sounds impossible. Certainly, much research must be done before the possibility of controlling the weather can become a reality. However, the point is that the Russian scientists have been furnished the finances and the facilities to approach this objective, while the United States has thus far failed to face up to the need for further expenditures to meet this additional basic Russian challenge.

The following article, originally published in the New Bedford, Mass., Standard-Times, indicates some of the frightening possibilities that weather control encompasses. It is imperative that our country keep abreast of these scientific developments so that we can combat enemy attempts to use advancements of this sort as instruments of conquest.

CONTROL OF WEATHER COULD WIN WAR
(By Everett S. Allen)

The day will come when Russia can withhold rainfall from food-producing regions of the United States and subject our warm southern areas to freezing temperatures. It also has been suggested that all of the world's major seaports could be flooded to the point where they would have to be abandoned, by a relatively simple man-made process.

These predictions have been made by responsible U.S. scientists who regard them as definite possibilities. Studies already indicate that world climate is subject to control; if the Soviet Union were successful in using such control as a weapon, it could cause the United States to surrender without a shot ever being fired.

IS ELECTRICITY THE KEY?

Howard T. Orville, chairman of the Advisory Committee on Weather Control, now completing a report to be presented soon to President Eisenhower, has speculated Russia "might one day be capable of freezing Florida or turning the Midwest into a permanent drought belt."

In the December 1957 issue of the bulletin of the American Meteorological Society, Dr. Henry G. Houghton, director of the Laboratory of Earth Sciences at Massachusetts Institute of Technology, says talk about weather control can no longer be regarded as visionary.

Calling for more support of basic scientific research, including oceanography and meteorology, Dr. Houghton suggested atmospheric electricity may well hold the key to weather control.

Duncan C. Blanchard, of the Woods Hole Oceonographic Institution, noting that droplets shot from the ocean surface in whitecaps are electrified, already has calculated that the charged droplets may account for a major part of the electrification of the lower atmosphere.

ACCORDS NEEDED

Dr. Houghton said, "International control of weather modification will be as essential to the safety of the world as control of nuclear energy is now. Unless we remain ahead of or abreast of Russia in meteorological research, the prospects for international agreements on weather control will be poor indeed.

"An unfavorable modification of our climate in the guise of a peaceful effort to improve Russia's climate could seriously weaken our economy and our ability to resist."

Dr. Edward Teller, eminent U.S. nuclear physicist, testifying before the Senate Preparedness Subcommittee, has suggested the Russians could deny the United States any rainfall for a period of 2 years, with obvious catastrophic effects.

American physicists have cited several approaches that might achieve intercontinental weather control; virtually all of them involve the oceans and it is, therefore, to marine scientists that the free world must look for its greater knowledge of these ideas, and for possible counter measures. Their seriousness is apparent. Mr. Orville has said weather control could have results more disastrous to the United States than atomic discoveries.

FLOOD NEW YORK

Here are three of the ways in which weather might be controlled or affected in major degree:

1. A material might be spread on the surface of some body of water important to the weather of a large area, such as the Gulf of Mexico, that would retard the evaporation and reduce rainfall over the adjacent land masses.

2. Some material having the opposite effect, that is, to increase evaporation, might be used instead. This conceivably might increase both cloudiness and rainfall, and therefore, possibly reduce area temperature.

3. Spreading coal dust, lampblack or some similar substance over the ice and snow-covered North and South Poles could melt these regions, raising the level of the oceans to such degree as to flood the world's principal ports, including New York City. It has been estimated this might bring the Atlantic Ocean level so high that New York would be underwater up to Times Square. The lamp-black merely changes the snow's reflectivity; instead of reflecting sunlight, it absorbs it, with consequent melting.

Although it seems far-fetched to assume that mankind would do this deliberately, since all world ports would suffer, and many other coastal areas as well, it is not impossible to accomplish.

SALT STARTS RAIN

Dr. Alfred H. Woodcock of the Woods Hole staff has long been greatly interested in the physical chemistry of the sea surface upon which plans 1 and 2 would depend. He suggests that salt particles fired into the air by bubbles on the sea surface may be largely responsible for our rain. These particles, kicked into the air by whitecaps and carried aloft by a wind of not less than 12 miles an hour, act as nuclei to produce raindrops and precipitation, he believes.

High in the air, tiny moisture droplets grow into raindrops by combining with other droplets around a nucleus of salt particle. If they did not have some such nucleus, there presumably would not be enough big drops in the atmosphere to make it rain. A cloud will produce rain, Dr. Woodcock believes, when it contains sufficient moisture and enough of these giant nuclei.

Lending support to this theory is the fact that the theoretical amount of salt carried inland from the sea by wind (4.8 pounds an acre) is close to the actual "salt-fall" in rain, which is 3.8 pounds an acre.

EFFECT OF OIL

Dr. Woodcock has suggested that changing the surface tension of an area of ocean, that is, perhaps reducing the number of white caps—or eliminating them entirely—by spreading a film of oil on the sea surface, might change the amount of salt kicked into the air by bubbles and might, therefore, reduce appreciably the amount of rainfall.

Apparently, a small variation of wind velocity also makes a big difference in cloudiness and rainfall, since winds of less than 12 miles an hour do not seem to pull water bubbles up into the air from the wave surfaces.

This theory opens up some very interesting possibilities. Ethical scientists would not choose to experiment with it unless they knew in what direction it might alter events, but it might, for example, be a good way to stop hurricanes, by triggering off small storms instead of big ones. Since it might also, however, have unexpected results, such as denying the West Indies normal rainfall, it should be done only by international agreement.

Whether such international agreements are possible with Russia would seem to hinge on whether American earth scientists are given sufficient support in men, money, and equipment to hold their own in this race for weather control.

If they aren't weather can become a weapon—the most terrible weapon man has ever known.

## Scope of the Communist Bloc's Foreign Aid Program

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. WILEY. Mr. President, we recognize that in the East-West struggle the Reds are making greater and greater efforts toward economic penetrations of more and more areas.

Last year, for example, the Communist bloc provided aid for 18 underdeveloped countries; totaling about $1 billion.

We recognize, of course, that this amount is still substantially below what the United States has provided in grants and credits to the same countries.

However, we must recognize, also, that the Communists are putting greater and greater emphasis on economic penetrations as a means for attempting to take over new countries.

As this aspect of the East-West struggle develops, we must, of course, keep

fully abreast of the comparative scope of the free world and Communist programs in this field.

A recent edition of the New York Times carried an article entitled "Reds' Foreign Aid to 18 Countries Up Billion in 1958," outlining the countries which were receiving some of the aid, as well as illustrating by comparative figures the United States and Communist bloc outlay. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REDS' FOREIGN AID TO 18 COUNTRIES UP BILLION IN 1958—BUT ECONOMIC ASSISTANCE IS FOUND TO LAG BEHIND AID PROVIDED BY THE UNITED STATES

(By E. W. Kenworthy)

WASHINGTON, March 21.—The Communist bloc signed aid agreements with 18 underdeveloped countries last year totaling $1 billion, according to the State Department.

This marked a sharp stepup in the bloc's economic offensive. However, even in the areas in which the Communists concentrated their offensive, their total aid program lagged behind that of the United States.

The Communist drive did not get underway until 1955. Up to the end of 1958, the bloc had signed agreements with 18 underdeveloped countries to provide $2,373 million in grants and credits for military and economic aid.

Of this total, $1,591 million was for economic aid and $782 million for military.

U.S. PROGRAM LARGER

By contrast the United States over the same period extended grants and credits to the same countries amounting to $4,442 million. Of this, $3,304 million was in economic aid and $1,138 million for military.

The disparity in the Communist and U.S. programs is greater if account is taken of what the United States has extended since 1948.

Over the 11 years, the United States has extended to these 18 countries loans and grants totaling $8,628 million, of which economic aid amounted to $6,005 million and military $2,623 million.

The Communist bloc is also stepping up its technical assistance program. During the last 6 months of 1958, 2,809 technicians spent at least a month in one or another of 19 countries. This compared with 1,600 a year earlier. In addition, there were 1,200 military technicians serving in these countries.

FIGURES NOT COMPARABLE

Figures for United States technicians are not comparable because they do not move in and out as do the Communist advisers. As of December 31, 1958, there were 2,333 United States economic aid experts in the same countries.

The Soviet aid program began in 1954 with a $11 million credit to Afghanistan. Since then the yearly aid totals were as follows: 1955, $339 million; 1956, $718 million; 1957, $287 million; 1958, $1,029 million.

Of the nearly $2,400 million extended by the bloc, the Soviet Union has offered $1,600 million, the Eastern European satellite countries $650 million and Communist China $120 million.

A relatively small amount of the Communist aid has actually been delivered—only about $900 million of which more than half is military.

Aid has been concentrated in the United Arab Republic (Egypt and Syria), Iraq, Afghanistan, India, Indonesia, Argentina, and Yugoslavia.

The Soviet Union moved into Iraq with offers of aid after last summer's revolution. It granted a military aid credit of $120 million. A few days ago negotiations were completed for economic aid credits of $137 million.

Virtually all Communist aid is in credit form; grants have been negligible.

For the past year, most development aid extended by the United States has been in loans repayable in local currency. Export-Import Bank loans are repayable in dollars. Technical assistance is in grants, and so, usually, is aid extended from special assistance or contingency funds for budgetary support of countries with shaky economies.

United States military aid is in grant form, and this is true also of defense support aid to enable countries to maintain larger military forces than they could otherwise afford.

The following table compares Communist bloc commitments and United States obligations and authorizations for economic aid from 1955 through 1958 in millions of United States dollars:

| | Soviet bloc | United States |
|---|---|---|
| Afghanistan | $116 | $62 |
| Argentina | 102 | 285 |
| Brazil | 2 | 551 |
| Burma | 34 | 58 |
| Cambodia | 34 | 125 |
| Ceylon | 58 | 32 |
| Egypt | 311 | 22 |
| Ethiopia | 2 | 45 |
| Iceland | 5 | 17 |
| India | 304 | 954 |
| Indonesia | 194 | 143 |
| Iran | 3 | 153 |
| Iraq | 0 | 10 |
| Nepal | 13 | 14 |
| Syria | 195 | 0 |
| Turkey | 13 | 431 |
| Yemen | 42 | 0 |
| Yugoslavia | 163 | 402 |
| Total | 1,591 | 3,304 |

## Address by Hon. Hugh Scott, of Pennsylvania, at Annual Meeting, Fellows of American Bar Foundation

EXTENSION OF REMARKS

OF

## HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. KEATING. Mr. President, the distinguished Senator from Pennsylvania [Mr. SCOTT], recently delivered a timely address in which he called on America to revive the great institution of patriotism. His remarks, delivered to the annual meeting of the Fellows of the American Bar Foundation on Washington's birthday, deserve the widest dissemination possible.

By thoughtful analogy to the experiences of some of our soldiers in the Korean conflict, the Senator from Pennsylvania points out that our schools and our Nation in general are failing to teach the great heritage that comes with being an American. He calls for an unremitting emphasis on the origins of our Nation, on what made it strong and great and kept it free, upon fundamentals of our national purpose.

I believe this clarion call to Americans to revive the teaching of the ideals which have made our Nation great should be read by every American. The Senator from Pennsylvania has performed a real service for our people by his able presentation of this problem.

So that a larger readership will be able to have the benefit of his wisdom, I ask unanimous consent that this splendid address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR HUGH SCOTT AT ANNUAL MEETING OF THE FELLOWS OF THE AMERICAN BAR FOUNDATION, EDGEWATER BEACH HOTEL, CHICAGO, ILL., FEBRUARY 22, 1959

My good and long time friend, Dave Maxwell, Mr. Luce, Mr. Malone, Mr. Williams, distinguished guests, ladies and gentlemen, congressional and public interest in the progress of the missile programs of the United States and the U.S.S.R., increases in intensity. What it will cost to close the missile gap, how long it will take, what procedures to follow, who's right, who's wrong—no current topic sparks more discussion, be the locale bar meetings, Bar Harbor, or barrooms.

That this gap exists, few will deny. Yet how many are aware of a far more menacing, infinitely more dangerous gap in our long range national security planning?

The closure of the missile gap is basically a matter of how much we are prepared to spend to maintain our security through fully adequate, deterrent, and retaliatory forces. This, of course, involves considerations not limited to, or by, numerical quantity of weapons.

What of this other gap? It is not one which can be bridged in a year, perhaps not in a dozen years.

Let us look at what befell us. Our country entered the fifth decade of our century rich, bounteously blessed, lolling at the wide end of the biggest cornucopia in the world. Then, seemingly all at once, and out of context with our proud national history, we developed a flaw. A flaw which could widen into a crevasse.

"In Every War But One," as a recent book of that title by Eugene Kinkead records, our Armed Forces presented no problem of loyalty, caused no concern in the country as a whole regarding the conduct of the individual American when a prisoner of war. That one war was the Korean war.

Oddly, and without precedent, not a single American prisoner of war managed to escape, for the first time in any of our wars. Twenty-one Americans elected to remain with the enemy.

This in no way derogates from the courage, devotion, and magnificent conduct of most American fighting men in Korea, but what of the fact that over one-third of American prisoners of war collaborated to at least a minor degree with the Communists, and about 13 percent became active collaborationists?

What went wrong?

Capt. L. S. Robinson, U.S. Navy, says: "It was lack of home training, loose standards, the idea of the fast buck, the quick deal." He lays the blame also to the almost total disregard of authority and to the unpopularity of the war.

I think it goes much deeper than that, especially when we consider the success of Red Chinese indoctrination tactics. I used the term "indoctrination" rather than "brainwashing" since the Army definition of brainwashing is a process producing obvious alteration of character whereby the subject ceases to be the same personality he was before. There is no real evidence of the use of the kind of severe measures required

to effect a change of personality. What was accomplished here, was rather a change of viewpoint whereby Americans were persuaded to adopt the enemy's propaganda as their own. Incidentally, while there is plenty of evidence of disciplinary cruelty, there is not a single documented case of cruelty being applied in the indoctrination of prisoners. The method used was an alternation of leniency with pressure, the continued relentless repetition of plausible, seemingly factual statements.

The techniques used by the Chinese Communists were repetition, harassment and humiliation. Prisoners were required to cram on Chinese literature and were constantly examined on Communist ideology day in and day out, week in and week out. As the author of the book I have referred to states: "The technique of harassment was equally successful. * * * of the three tactics, the third, humiliation did the most psychological damage." Although prisoners were specifically promised leniency, any prisoner who questioned a point of Communist doctrine during a lecture period was required to remain seated and the entire class of his fellow prisoners ordered to stand and remain on its feet until the objector had abandoned his objection. This led the other prisoners after hours of standing to complain and mutter against the objector and ultimately let to his capitulation. The prisoner was then required to read a long self-criticism ending with an abject apology to the class and the instructor followed by a period wherein his classmates were ordered to criticize him which they did. He in turn was made to criticize his classmates. This technique ultimately led to complete distrust of each prisoner by every other prisoner and the effect on morale was obvious.

Why were these arguments effective? They were effective because our soldiers had little or no grounding in American foreign policy, little interest in current events and wholly inadequate grounding in American history or the basic tenets of the individual's duty to his country.

Were these American soldiers incapable of learning? True, many had immature minds and some had not gone beyond the fifth grade. But they returned to the United States able to recite long passages from Karl Marx from memory, they had studied the theoretical writings of Lenin and Stalin until they could argue the merits of communism and its superiority to democracy with some of the best educated Army interrogators. It ought to be added here that many of the collaborators came from the ranks of those who were bright and who had had an average or better than average education. Indoctrination therefore was successful to some degree in all groups and the degree of education was evidently not the controlling factor.

There has been failure in depth here, on the part of teachers and public officials. Failure in home training played its part too. Too many young soldiers had been indoctrinated before they ever landed in Korea, in the belief that it's what you get, not what you give, that counts. "The fault, dear Brutus, that we are underlings, lies not in our stars but in ourselves."

The growth of governmental paternalism, the promise to vote benefits out of the pockets of some people into the pockets of others, the concept of America as the "Lady with the Ladle" rather than the "Lady with the Lamp," these ideas had found fertile ground in the minds of young men who had never been taught to honor sacrifice, to respect unselfishness, to feel devotion to a cause, to love one's country, to cherish the memory of those who died in all our wars for freedom's cause.

Those who faltered were the "beat" of this generation. There were so many more who met their duty and their destiny with gallantry and patriotism.

But those who failed are a charge upon our conscience, a warning of signs of decay among us, a peril to our future security. "He that cannot think is a slave; he that dare not think is a coward; he that will not think is a bigot."

Before patriotism goes out of style, should we not busy ourselves with some wise remedial planning?

I believe we must, through State and local programs, reexamine and drastically overhaul our present methods of instructing our youth, in grade school, high school and college. Here is a quote from an interesting letter written by a college girl which appears in the March issue of the Atlantic Monthly: "My academic preparation had included work on the school annual, student service in the school library, traffic laws and safety, courses in poise, and a culture course that somehow never went beyond young person's guide to the orchestra." One wonders whether the high school in question had any courses in American history, civics, government, and one may be permitted to wonder also what textbooks may have been used. The Federal Government should reexamine its Armed Forces indoctrination and orientation programs, even though there has been progress in this area in the past 5 years.

We need unremitting emphasis on the origins of our Nation, on what made it strong and great and kept it free, upon the fundamentals of our national purpose.

I would like our schools to stir our students to love of country, to prepare them to counter the washers of brains with undeviating faith founded upon knowledge of our country's principles and policies, with the sturdiness of their conviction in the justice of our country's cause. And if this be propaganda, I would also like our Armed Forces to employ much more of it.

Nor it is sentimentalism which leads me to suggest that I would like to hear again in the classrooms of America, the stirring stories of our clearing of the wilderness, the wintry tale of the agonies of the men of Washington at Valley Forge, the gallantry of Ticonderoga, Antietam, Chateau Thierry, and Iwo Jima.

I would like to hear again in the classrooms of our Republic, the rolling cadences of "Hail, Columbia", "The Battle Hymn of the Republic," "The Halls of Montezuma." I should like to be assured that from these, our halls of learning, our sons and daughters depart with the chambers of their minds filled with the beauteous and pleasant riches of wisdom, tolerance and patriotism. So armed, they will meet and conquer the menace of any Red schoolhouse.

These things I would like,
And so, I think, would you.

---

## The Soviet Economic War

EXTENSION OF REMARKS
OF
## HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. BRIDGES. Mr. President, it is an established fact that the Russian threat to the continued existence of our way of life is not clothed solely in the shroud of nuclear warfare. Certainly we recognize that we have been in the throes of an economic war with the Soviets for some time. This trade war has already had very serious ramifications throughout the free world.

Ray Tucker, a highly respected writer on the Washington scene and one of the outstanding columnists in the country, has written a summary on this aspect of the overall Communist plan for world conquest. Entitled, "How the Reds Wage Their Global Trade War," it appeared in the April edition of the American Legion magazine.

Mr. Tucker's informative article contains such valuable information that I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW THE REDS WAGE THEIR GLOBAL TRADE WAR

(By Ray Tucker)

Although cold-war shooting affrays in Korea, Indochina, the Middle East, and the Formosa Strait have commanded the headlines in recent years, Russian and Chinese Communists are waging another equally insidious and dangerous battle against the free world, and especially against the United States. Success in this battle, the Red economic offensive, could be a body blow to the democratic and capitalistic system, and indeed to our way of life.

When Nikita Khrushchev told a group of Western diplomats that, "We will bury you," he was not forecasting a military and atomic devastation. He was threatening a trade war that has already created commercial chaos throughout the free world at the expense of the American people as workers, consumers, and taxpayers.

Although only skirmishing as yet (it began in early 1958), Khrushchev's commercial guerrillas in civilian garb have caused serious military damage to us. They contributed to the break with Egypt and the Lebanon-Jordan crisis, for Dictator Nasser became more daring and defiant after he received Russian arms for Cairo cotton. They provoked the Iraq revolution that may give Moscow access to and control of Middle East oil so vital to the West. They helped to shatter the Baghdad Pact, and they threaten to disrupt SEATO, the anti-Communist alliance in southeast Asia.

Khrushchev had these gains in mind when he said on another occasion: "We regard trade least for its economic profits and most for its political purpose." In pursuing this objective without regard for the profit-and-loss factors which must govern trade in the democratic and free-enterprise system, Moscow has engaged in strategy and tactics which are utterly brutal.

Khrushchev and his oriental conspirator, Mao Tse-tung, are dumping vital products on world markets at villainous and cutthroat prices. They are underselling the West's rival goods from 10 to 20 percent and on terms (2 percent for 20 years) which private traders cannot afford to extend. When necessary, they resort to primitive barter, and swap raw materials for machinery and finished goods, or vice versa.

Their purpose is obvious, even if Khrushchev had not delivered his funereal ultimatum. They seek to make world economies utterly dependent upon close economic and political relations with the Communist power bloc. They aim to disrupt world trade to such a degree that it will bankrupt the democracies and neutrals foolish enough to deal with Moscow and Peiping. By creating unemployment and privation, as they have done in Finland and Bolivia, they expect to supplant pro-Western governments with Communist regimes. Pending achievement of these ultimate goals, they are forcing

Uncle Sam to pay a large part of the bill for their current depredations.

This economic threat will become far more dangerous when and if Russia and China reach the industrial and agricultural status envisaged in their 5- or 7-year plans. Then they will hurl at us the mineral, food, and manufactured output of a billion state employees as well as their vast natural resources. And the United States, as the anchor of the anti-Communist alliance around the world, is their special target. Should the United States go under, they figure, Khrushchev need only to summon the pallbearers for democracy.

The sinister nature of this attack is recognized at Washington. President Eisenhower describes it as a "subtle and long-range instrument of warfare." Secretary Dulles warns that it matches the Communist military menace. Allen W. Dulles, whose Central Intelligence agents have uncovered many surreptitious Red deals, says that it is "the most serious challenge that has ever confronted the United States in time of peace."

It is not possible yet to measure the bread-and-butter effect of this economic bombardment on domestic jobs, wages, profits, prices, and so forth. However, due partially to its initial gains, our foreign trade has fallen by $4 billion a year, which represents a loss of between 400,000 and 600,000 jobs in this country, according to official estimates. The declines in U.S. exports have occurred in the manufacture and marketing of commodities Russia has begun to export so heavily and deliberately.

Moreover, as taxpayers, all Americans suffer because of the vast amount of foreign aid required to combat this threat—$4 billion a year. Another heavy burden on the taxpayer is the cost of stockpiling raw materials from countries victimized by Russo-Chinese sabotage. Only recently Uncle Sam paid $2 million for 1,000 tons of unneeded Bolivian tin that became unsalable because Russia had dumped that commodity on the world market.

The generalissimo of this trade war is shrewd, ruthless First Deputy Premier Anastas I. Mikoyan, who recently visited this country and sought, with characteristic cynicism, to expand commerce with this country. As Life magazine said of him, "He handles trade like a gun." His agents are trained so that they know the language, the peculiarities, the needs, and the customs of the countries to which they are accredited.

Mikoyan assigned 3,500 of these trade specialists throughout the world in the first half of 1958. This is double the number of U.S. commercial attachés abroad. It is significant—and sinister—that he sent the largest number to such trouble spots as Afghanistan, Nepal, India, Indonesia, Syria, Egypt, and Yugoslavia. He has extended $2½ billion in credits, with 80 percent allotted to these same restless and strategic areas. This is twice the amount which the United States has advanced to these same countries.

Mikoyan uses the dumping process to undermine American good will abroad as well as to erode our own economy. When prices of a certain country's commodities fall because of his bludgeoning tactics, his agents blame it on (1) American refusal to buy their goods, and (2) on tariffs and quotas imposed by Congress or the White House. These sideswipes have been especially effective in Latin America.

In view of Mikoyan's record, the warm welcome accorded him on his recent tour of this country had its ironic aspect. His hosts—industrialists, bankers, automobile executives—were entertaining the man who is their world public enemy No. 1, for he is robbing them of markets and prospects. Nowhere did he receive a friendlier reception than from the heads of Detroit's auto firms. Apparently they had not heard of his current scheme to produce a new, small, cheap car with which he hopes to capture the Western European market. It will be called the Satellite, a propaganda reference to Russia's outer space achievements and its current supremacy over the United States in the skies.

Mikoyan's men have far more than strictly Russian-made goods on their sales lists. Besides offering her own products at bargain rates, the Soviet Union deals in ridiculously cheap goods which she receives from satellites and nations foolish enough to deal with her. The Kremlin acts as an international clearinghouse for the exchange and re-export of every product imaginable—from such materials as aluminum, platinum, gold, oil, cotton, asbestos, tobacco, tea, coffee, coal, textiles, and jute to Christmas cards made in atheistic Peiping.

Russia's share of an estimated annual world commerce of $100 billion is relatively small—only $10 billion. But the international trade structure is so sensitive and delicately balanced that it is vulnerable to slight and unexpected pressures. Merely by dumping 20,000 tons of Hungarian aluminum on the world market in 1958, Russia forced a drop of 2 cents per pound in the price of the free world's production of 3 million tons. This created a surplus from which American firms have not yet recovered. It forced them to cut prices from 2 to 1.3 cents a pound, and to shut down plants.

The global effect of a tin glut in this same year was devastating. Although Russia exported only 9,000 tons in 1957, Khrushchev increased shipments to 18,000 tons last year. This resulted in a drop in price of $200 a ton in Malaya (where this metal is the chief cash commodity) and paralyzed the economy there. Almost simultaneously Washington received diplomatic warnings that Malaya and certain Southeast Asia members of SEATO were in danger of a red coup.

This same tin foray was almost fatal to the pro-West government of Bolivia whose economy is 90 percent dependent on this product. The price fell from $1.24 to 90 to 95 cents, and revenues from $8 million to $3 million a month. Foreign Minister Victor Andrade made an emergency flight to Washington to negotiate a trade of surplus tin for needed American goods.

"Although the Eisenhower administration deplores the Bolivian Government's wasteful practices and nationalization policies, the United States must support the La Paz regime lest the tin crisis lead to a Communist takeover. We have subsidized Bolivia to the extent of $121 million in 4 years, and there is no sign of a letup in that country's demands. That bill to American taxpayers is chargeable directly to Khrushchev and Mikoyan.

The first direct trade bomb tossed at the United States involved benzene. To the amazement of the industry and Secretary Dulles, a leading American firm, Dow Chemical Co., announced that it was buying 13,500 tons of benzene from Russia because Russia's price was 6 cents cheaper per gallon than the prices of rival bidders.

In this connection, Russia has given East Germany $200 million to expand its chemical industry, which is now the world's seventh largest. By laying a pipeline from the coast of the Caspian Sea and pumping 5 million tons of oil annually to East Germany's petrochemical plants, Moscow expects to boost the output of these products by 60 percent in 3 years. With chemical commodities so essential to many countries and new industries, cutthroat competition in this trading area has only begun.

Another important American industry—coal—faces hard going from Communist trade practices—or malpractices. Although bitterly hostile over the division of Germany and the current threat to West Berlin, Chancellor Konrad Adenauer has notified the State Department that he plans to cut American imports from 11 million to 2 million tons a year in favor of cheaper coal from Communist Poland.

In protesting to Secretary Dulles, the coal operators told him that, partially because of Communist competition, U.S. production has fallen off by 21 percent since 1957. John L. Lewis noted that membership in his United Mine Workers has dropped from more than 400,000 to 225,000, and that they are now struggling along on only 3 days of work a week. If such a sturdy Western friend as Adenauer feels that he must succumb to these Communist pressures, it amounts to a serious Western defeat in the trade war.

An unusually flagrant example of Russia's Machiavellian designs concerns Polish butter. Although Poland is traditionally an importer of this food, buying 5,000 tons as recently as 1956, it exported 12,000 tons on Western Europe in 1958. As is true of almost every product which Russia, China, and the satellites dump abroad, butter is not available to the Poles because of its high domestic price.

Economic experts in the State, Commerce, and Agriculture Departments note that the Kremlin directs its economic operations against the West's weak spots and defense lines—the Middle East, the Far East, and Southeast Asia. But they are especially alarmed over the Communists' penetration of South America. In his recent report to the President on his survey of this area, where Vice President Nixon was almost stoned to death, Milton Eisenhower warned of this danger on our doorstep.

Argentina, for instance, negotiated a $100 million trade agreement with Russia in 1958, swapping raw materials for oil-drilling equipment which Buenos Aires claimed was more efficient than American machinery. But soon after the deal Persident Arturo Frondizi had to declare a state of siege to quell workers' strikes in the oilfields. The Russian engineers accompanying the shipment of oil-drilling equipment it seems, were also agents provocateurs. To bolster the Frondizi regime, U.S. agencies have had to lend $329 million to Argentina—another bill that should be sent to the Kremlin.

Russia has offered to barter 200,000 tons of crude oil with Brazil in return for coffee, cotton, and cocoa. The ironic and significant aspect of the transaction, which Rio de Janeiro has not yet accepted, is that Russians do not drink coffee; they prefer tea and vodka. Khrushchev, of course, would resell the coffee and cotton to the disadvantage of South American, Asiatic, and African producers of those products. He has already reexported such things as rubber from Ceylon, rice from Burma, wool from Uruguay, fish from Iceland, tea from China, and cotton from Egypt.

These sharp and merciless practices, however, have profited the West in several important and long-range respects. They are beginning to convince many small and hitherto neutral nations that they cannot trust the Communists or do business with them on a normal, honest, and decent basis. Specifically, it appears to be driving such influential leaders as Nasser, Nehru of India, and Tito of Yugoslavia into the Western camp. And the shabby treatment of Finland has disillusioned the traditionally neutral Scandinavian peoples.

Nasser fancied that he was making a fine, anti-Western deal when he shipped his long-staple cotton to Moscow for tanks and planes. Now, however, he discovers that Mikoyan, instead of fabricating the raw material into textiles for home consumption, is reexporting it and stripping the Egyptian dictator of historic markets. Every nation which has dickered with the Kremlin in this way has found such trade to be an economic Trojan horse.

Nasser's great dread, however, is Russia's steady penetration of the oil-producing areas from the Caspian Sea to the Persian Gulf.

A successful Communist incursion here would destroy his United Arab Republic, and deprive those nations of the billion a year royalties which they need to realize their ambitions. Similarly, such a conquest would constitute a costly and dangerous oil squeeze on Western Europe, the NATO war machine, and the United States.

Russia does not need this petroleum, for she has plentiful supplies within her own borders. But domination of these countries would enable Moscow to cut off supply of a product essential to our major allies' peacetime economy and warmaking potential. It would permit the Communists to demand 60- or 70-percent royalties from Western concessionaires, as against the current 50 percent.

Every American who runs a car or who heats his home with oil would feel the impact in higher costs for gasoline and fuel. It would skyrocket general costs of living because of heavier charges on industry. It might reduce our petroleum supplies to a dangerous level because of our need to supply our military establishments and allies which now "contain" Russia.

Once a Moscow ally, Tito now finds himself the victim of the Russian bear's claws. When he refused to adhere blindly to the Kremlin's dictates and resumed relations with the United States, Moscow canceled an agreement to advance $285 million for a steel mill and fertilizer plant. Washington is now providing the needed funds—another charge on the American taxpayers.

Several other nations have learned that Mikoyan handles trade like a gun and for political purposes. When Israel invaded Egypt, Moscow immediately canceled all oil contracts with Tel Aviv. When Australia gave asylum to an official who defected from the Soviet Embassy there, Mikoyan stopped the purchase of wheat for several years. Perhaps the most tragic and spectacular example of Russian trade treachery is Finland. Her experience furnishes a case history for countries hoping or planning to do business with the Communists.

Faced with heavy reparations payments in kind to Russia, Finland had to rebuild its factories and reorient its economy to fulfill Communist demands and requirements. But when this debt was liquidated, Finland increased its trade with the West. It found Western goods, especially automobiles, cheaper and more attractive to the domestic market. The conservative Fagerholm government also refused to give any cabinet posts to Finnish communists.

Russia immediately canceled all orders it had previously placed, including articles on the docks awaiting shipment. It also cut off all shipments of goods to Helsinki. The result was complete economic stagnation, a lack of necessities, harsh unemployment, and bankruptcies. As a result, the Fagerholm government collapsed. Finland may now have to install a pro-Communist regime in order to survive as a vassal.

Even the patient Nehru's neutrality is wearing thin under Russian and Chinese trade machinations. Mao Tse-tung is selling tea, textiles, jute, peanut oil, coal, and light engineering products throughout southeast Asia at less than India can offer, and on more favorable terms. The cotton which Khrushchev obtains from Egypt finds a readier market than Nehru's less desirable product. Red exports to Hong Kong, Singapore, Malaya, Thailand, and Burma have increased steadily since early last year.

In September 1957 Ceylon asked bids on 1,700,000 tons of coal. India expected to get the full order, but wound up with only half. China provided the other half at a cheaper figure. India's textile industry, one of the best managed in the world and wholly in private hands, has sustained severe losses because of Chinese competition. India's exports are running 50 percent below the 1957 total. Here again, the United States is spending several hundreds of millions annually to keep India and the Colombo plan nations from succumbing to this economic offensive.

Thailand was ready to sign a contract for rice from South Africa. But Peiping got the business by offering a 20-percent reduction. Red China's bicycles sell at Singapore for one-fifth of their cost in Peiping; thus they oust the products of our ally Japan. Although banned for distribution in godless China, Christmas cards from the Chinese capital flood the Christian market in southeast Asia.

Russia's eventual economic objective, being worldwide in its grasping, is Africa. Soviet conspiracies, therefore, seek to topple Nasser and penetrate the new and unwary republics on the Dark Continent. Should that happen, Communist attack on three major American and South American products—cotton, tobacco, and coffee—might be destructive. With cheap land and controlled labor, her inroads on commerce, wages, jobs, prices, profits, and political unity could be an economic Waterloo. That is the precise meaning of Khrushchev's thoroughly contemptible prediction that "We will bury you."

The United States and its allies are trying to meet this challenge in many ways. We are bolstering vulnerable areas with financial and technical assistance. We are leveling tariffs so as to make it easier for them to trade with us. We are negotiating international agreements for stabilization of prices of the free world's commodities. Bills before Congress provide tax incentives for foreign investments by American firms. We seek to improve living standards so that non-Communist lands will be less susceptible to Red wiles and blandishments. The recent European approach to economic unity—the Common Market and freeing of money—is aimed at Russia's trade offensive.

President Eisenhower has created a new State Department post and bureau to counterattack on this front. It is headed by Under Secretary C. Douglas Dillon, New York investment banker and former Ambassador to France. He regards his assignment (and so does the White House) as important as the responsibilities which fall on Neil H. McElroy, the Secretary of Defense. Nobody cognizant of the Russo-Chinese gains in this new economic warfare disputes him.

## Address of Dr. Lev E. Dobrianski at Congress of Americans of Ukrainian Descent

---

EXTENSION OF REMARKS

OF

## HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. JAVITS. Mr. President, over the Washington Birthday weekend, the Ukrainian Congress Committee of America held its Seventh Triennial Congress of Americans of Ukrainian Descent. This organization consists of and represents the American regional and local organizations and groups of Ukrainian background.

At this seventh triennial congress, Dr. Lev E. Dobriansky, chairman of the Ukrainian Congress Committee of America and a professor at the Georgetown University in Washington, D.C., developed his ideas on the relation to the captive non-Russian nations within the Soviet Union to the struggle of the free world for freedom everywhere. In the context of his thesis, Dr. Dobriansky stressed the importance of Senate Joint Resolution 54, the measure which I introduced on February 19, 1959, authorizing the erection of a statue in Washington, D.C. of Taras Shevchenko, the Ukrainian national poet of freedom who received much of his inspiration from George Washington and the U.S. Republic.

I ask unanimous consent that Dr. Dobriansky's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SEMANTIC HOAX OF FLEXIBILITY AND U.S. FOREIGN POLICY

(Address by Dr. Lev E. Dobriansky, Georgetown University professor and chairman of the Ukrainian Congress Committee of America, February 21, 1959)

Ladies and gentlemen, it is a real pleasure and delight for me to greet you this morning upon the opening of the Seventh Triennial Congress of Americans of Ukrainian Descent.

As delegates from numerous States in different sections of the country, you are assembled again in a congress which over this weekend is vested with striking significance as to time, place, and purpose. The time is one of national celebration in honor of the birthday of our first President, George Washington. The place is the Nation's capital named after the same founder of our free and independent country. The purpose is to fittingly translate the wholesome revolutionary separatism and self-determination of Washington's day to the many captive nations which exist today in the unprecedented empire of the Russian Communists.

Both time and place emphasize the dominant spirit and fresh traditions that have made our country the foremost national power on the face of the globe. Barring perhaps a global hot war, no single nation in this century or a good portion of the next could possibly compare itself in material power with these United States. There are many of our fellow Americans who would thoughtlessly object to this statement by pointing to the Soviet Union. In many instances, their faddy craze to learn the Russian language is exceeded only by their ignorance of the nature and fabric of the Soviet Union. You and I know that the Soviet Union is not a nation. You and I know that as a substrate empire, the Soviet Union is not comparable to this Nation. We know only too well that many achievements which some blindly dub as Russian, were and are the creation of the energies and resources of the captive non-Russian nations in this primary sphere of Moscow's extensive empire. In short, without these captive resources Russia would necessarily be reduced to a third-rate national power, and without Siberia, not even that.

In the more important sphere of spirituality and liberal culture our Nation is in essence unique. Yes, one hears from time to time moralistic warnings and condemnations about our growing materialism and secularism. Yet, despite some inevitable evidences of this, there exists, nevertheless, a tremendous and inexhaustible reservoir of religious faith, of principled dedication to moral norms, and of a creative sense of justice and charity. It is not my intention here to subtilize these sources of our total national power. It is enough to point out that despite our Kennans and other amoralists, these sources of moral and political principle are from time to time powerfully manifested in our domestic and interna-

tional relations. They are reflected in our passion for individual liberty, in our demands for just dues, in our compassionate warmth toward the plight of others, and in our symbolic values of national self-determination, a peaceful community of free nations, and the productive eradication of imperialism and colonialism. Basically, Russian totalitarianism is the very negation of these traits and values; and with this there can be no flexible compromise unless, self-defeatingly, we are prepared to debase our own standards.

The problem, therefore, is not one of moral and ethical erosion in this country. Instead, it is one of induced complacency, brought on by a methodical exploitation of our natural urge for peaceable relations with all peoples and by the pressing cares and new attractions of day-to-day existence. This has been demonstrated over and over again in the past, sometimes at an untold price in life and treasure. When a sharp crisis confronts us, our ranks close almost spontaneously, divisions of thought and sentiment fade, and the Nation in moral will and determination is solidly one. But at what price to be paid for the complacency we luxuriated in before? Today, we are being subjected to a high degree of complacent inducement by Moscow, by the traces of Mikoyan, and by the duped in this country who cry for flexibility in our foreign policies.

In its essence our Nation is unique. And in this essence resides a power that exceeds the power of all the hydrogen bombs, missiles, and space potentialities put together, now and in the future. The essence of this Nation lies in the concomitant diversity and unity of its people. Our country is a wholesome meltingpot of peoples of widely different ancestral backgrounds, creeds, and races; yet peoples who are only one people in their united consciousness as Americans. In this, also, no nation in the world can be compared in depth and scope with the essence of the United States. Those who point to the Soviet Union again speak from ignorance rather than knowledge. Newcomers to these shores accept voluntarily the fruits of Americanization: the imprisoned non-Russians in the U.S.S.R. resist voluntarily and desperately the onslaughts of Russification. Those who propose to introduce into our dictionaries the mongrel term, the Soviets, as a point of reference to the different nations and peoples in the Soviet Union, could not be of greater semantic service to Moscow. This monolithic term bears connotations and innuendoes that are not only unfair to the over 100 million non-Russian captives in this empire but also are semantically incongruous with elementary fact. As every schoolteacher knows, misused words are the best medium for protracted misunderstanding. And this particular word certainly does not further understanding of the basic, not to say chasmic, differences between the United States and the Soviet Union.

By virtue of its socio-political essence the United States possesses a rich power of affinity with most nations on earth. This affinity is grounded not only in mutual ideologic views of legitimate nationalism, self-determination and independence, and resistance to imperialist and colonial rule but also in even more fundamental ties of blood, tongues, faiths, and customary interests. Against the exemplary background of our traditions of individual and national freedoms, the essence of America and its unsurpassed power of affinity are both magnetic and propelling. They attract the attention and hopes of peoples everywhere, and they inspire peoples everywhere to realize the blessings that have been ours. Outstanding patriots in countless nations have pointed to these United States as a new phenomenon, a new and exhilarating growth in the culture of mankind, indeed, the beginning of a new world.

In the last century such a voice was heard from Eastern Europe. You and I know that a champion of liberty emerged in Ukraine. The renowned Ukrainian poet and patriot Taras Shevchenko actually pointed in his writings to this place, to Washington, as the inspiration and guide for the future of mankind. The essence of America rubbed off on many brilliant minds and leaders in distant lands, including Shevchenko's in Ukraine. It had both a magnetic and propelling force and to some degree continues to have it today.

My friends, let me remind you that 2 years hence, in 1961, and in this very month of February, the Shevchenko centenary will be observed in many lands of the free world. Moscow in its spurious way will undoubtedly attempt to exploit the anniversary event for its own political purposes. But the crucial fact is that Shevchenko did not look to Moscow or St. Petersburg but to Washington as the beacon of the future. Here is just one example of how the essence of America can be expressed through its power of affinity toward the 40 million captive Ukrainian nation. A fitting observance of this event by our Government would overwhelm Moscow's propaganda exhibition and have a far greater impact upon a large area of the Soviet Union than would 1 million costly cultural exchanges. Recognizing this, Senator JAVITS, of New York, is introducing a bill in Congress for the selection of a site in Washington to erect a statue of Taras Shevchenko on the occasion of the centenary. It goes without saying that Americans of Ukrainian background will gladly support this financially. Moreover, every effort should be made toward the issuance of a U.S. champion of liberty stamp in honor of Taras Shevchenko.

I cite this case to show what could and should be done to move the hearts and minds of men everywhere toward freedom, and at the same time defeat the maneuvers and goals of Moscow. We can no longer depend on a passive rubbing-off process for the essence of America and its power of affinity to shine in foreign lands. The challenge of lying Russian propaganda must be met by creative and imaginative deeds. This is in the nature of the cold war. Few Americans realize that the cold war is an old Russian political institution dating back to Ivan the Terrible. It is certainly no innovation of Lenin or fatuous Communist ideology. Few realize that it was largely through cold-war techniques, such as Khrushchev and Mikoyan display today with their deceitful pleas for "thaws" and "peace," that a tremendous empire was built. The military power of Moscow or St. Petersburg was always secondary because behind the bluster and bluff of its military "steamroller" no one trusted the multinational forces of the empire less than Moscow itself. Behind the mooniks and missiles of today this circumstance is the same. Cold war activity is inherent in the very structure of traditional Russian totalitarianism, and the sooner we Americans generally realize this, the sooner we can begin to cope imaginatively and flexibly with the challenge of "neither peace nor war."

Those who call for flexibility in our foreign policy are perpetrating a semantic hoax. Under the cover of this hoax, appeasement, compromise, and even surrender would logically follow. A child is not deemed flexible in thought if it insists that two and two make five. So a nation is not flexible in policy if it compromises the rules of its basic principles. The fundamental policy of colonial expansionism is fixed for Moscow; shooting from an inner Eurasian fortress, its strategy and tactics are flexible. Rationally, the same logic applies to the United States. Its policy must be firmly grounded in the essence of America, i.e., in the principles and hard-won norms which have made this Nation foremost in the world. The firmer this is, the more courage, will, and imagination we'll have to become maximally flexible in the only field to which the term flexibility logically applies, namely, the operational field of strategy and tactics. We haven't been sufficiently flexible in this field because we haven't been adequately firm enough in our own convictions and in universalizing the traditions, the essence, the affinity powers of this Nation.

Vice President NIXON put his finger on this very defect when he emphasized last September, before the Harvard Business School Association, that the way to combat Russian Communist imperialism and colonialism is to revitalize the American Revolution. This means the spirit of Washington, the principles of our traditions of freedom, the moral and symbolic mission of America. As the Vice President said: "It is ironic in the extreme that the United States should ever be cast in the role of opposing legitimate nationalist movements. Many of the ideas which motivate today's nationalists stem from American history and have been taught in American universities at home and abroad. * * * We, rather than the Soviet Union, should be the natural champion of legitimate nationalist movements." The plain fact is that we have been too flexible and lax with these ideas and their formulation into policy and thus inflexible with regard to their imaginative application and operational implementation. In short, those who view our policy as being inflexible have a topsy-turvy view of the entire problem. The winning pugilist is invariably the one with flexible ring tactics due to rigid, inflexible rules of training and self-discipline. The worst applied scientist is the most flexible with the logical dictates of laws and principles which form the nucleus of any policy.

In these terms, nowhere does U.S. foreign policy falter worse than in relation to the Soviet Union itself, and particularly in relation to the non-Russian nations within this basic empire. It is nothing short of amazing that we have a weapon in the 110 million non-Russian captives in the U.S.S.R. which is more powerful than all the hydrogen bombs put together, and most Americans are not even aware of it. Many officials who do, fear to use it in the endless cold war. They fear it might lead to revolution and bloodshed. One wonders whether they recall how our Nation was born. One of the real possibilities is that its prudent but fearless use can lead to a relatively peaceful revolution which would insure real world peace. By skillful diplomacy, capable psychological activity, and political, and cultural attraction in this fertile environment within the Soviet Union itself, the interests of freedom everywhere could be greatly advanced and expanded. The Soviet constitution and the internal propaganda of Moscow nicely accommodate this avenue of approach. In this case, let us take the Kremlin at its word in the dynamic pursuit of translating it into deed at the very heart of the empire itself.

This is the major direction of our efforts. The Ukrainian Congress Committee of America and each in his own way must continue to develop it with ideas and imagination. It still is an unexplored dimension of U.S. foreign policy.

## Great Message of Pope Pius XI on Threat of Atheistic Communism

EXTENSION OF REMARKS
OF
## HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. KEATING. Mr. President, regardless of what many in our midst would have us believe, the threat of the international Communist conspiracy continues to be great. In spite of an apparent aboveground abatement of their activities in this country and the publicized reduction of their membership lists, the Communists continue to pose an internal danger to the United States.

We must be constantly on the alert to combat this menace, both at home and abroad. In order to do this effectively, it is vital for every American to gain a deep understanding of what the Reds want and how they aim to accomplish their goals.

Recently, the Tablet, that great Catholic publication, reprinted in its editorial columns excerpts from the famous 1937 message of Pope Pius XI, in which the nature and danger of the Communist conspiracy was clearly delineated. This timeless declaration, underscoring the truth that communism is basically wrong, and exhorting His Holiness' followers to combat the conspiracy by all means possible, deserves the attention of all Americans.

It is fitting that the Tablet, which has unswervingly stood in the forefront of all efforts to expose and combat the machinations of the comrades, should reprint excerpts from this stirring message. This publication—a veritable bulwark against the inroads of communism—merits special commendation for its strong efforts in this important field.

Because the comments in the Tablet are so vital today, and because the encyclical "Divini Redemptoris" deserves renewed attention, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MESSAGE FROM POPE PIUS XI

On the feast of St. Joseph, in 1937 Pope Pius XI renewed and reviewed the authoritative position of the church on atheistic communism. In his great Encyclical Divini Redemptoris he said, speaking of the need for a spiritual power for good, which he described as the Catholic Church—to contest vigorously the spiritual evil of the day, communism—that he placed the "vast campaign of the Church against world communism under the standard of St. Joseph, her mighty Protector."

His eloquent restatement of the need for this campaign needs no further explanation or paraphrase. On this 22d anniversary of that encyclical, we feel it in order to quote a few key passages from Divini Redemptoris for the continued guidance of an informed laity and for the purpose of a call to greater zeal directed toward all members of the Faith who might read these words and thus be encouraged to go further in this "Campaign."

The Holy Father, speaking of the necessity of complete distrust for communism tactics, said:

"In the beginning communism showed itself for what it was in all its perversity; but very soon it realized that it was thus alienating the people. It has therefore changed its tactics, and strives to entice the multitudes by trickery of various forms, hiding its real designs behind ideas that in themselves are good and attractive. Thus, aware of the universal desire of peace, the leaders of communism pretend to be the most zealous promoters and propagandists in the movement for world amity.

"Yet at the same time they stir up a class-warfare which causes rivers of blood to flow, and, realizing that that system offers no internal guarantee of peace, they have recourse to unlimited armaments. Under various names which do not suggest communism, they establish organizations and periodicals with the sole purpose of carrying their ideas into quarters otherwise inaccessible. They try perfidiously to worm their way even into professedly Catholic and religious organizations.

"Again, without receding an inch from their subversive principles, they invite Catholics to collaborate with them in the realm of so-called humanitarianism and charity; and at times even make proposals that are in perfect harmony with the Christian spirit and the doctrine of the church. Elsewhere they carry their hypocrisy so far as to encourage the belief that communism, in countries where faith and culture are more strongly entrenched, will assume another and much milder form. It will not interfere with the practice of religion. It will respect liberty of conscience. There are some even who refer to certain changes recently introduced into Soviet legislation as a proof that communism is about to abandon its program of war against God.

"See to it, venerable brethren, that the faithful do not allow themselves to be deceived. Communism is intrinsically wrong, and no one who would save Christian civilization may collaborate with it in any undertaking whatsoever. Those who permit themselves to be deceived into lending their aid towards the triumph of Communism in their own country, will be the first to fall victims of their error. And the greater the antiquity and grandeur of the Christian civilization in the regions where Communism successfully penetrates, so much more devastating will be the hatred displayed by the Godless."

Then the Holiness, speaking directly to laymen, called for Catholic action:

"We extend our paternal invitation to our beloved sons among the laity who are doing battle in the ranks of Catholic action. On another occasion we have called this movement so dear to our heart 'a particularly providential assistance' in the work of the church during these troublous times. Catholic action is in effect a social apostolate also, inasmuch as its object is to spread the Kingdom of Jesus Christ not only among individuals, but also in families and in society. It must, therefore, make it a chief aim to train its members with special care and to prepare them to fight the battles of the Lord. This task of formation, now more urgent and indispensable than ever, which must always precede direct action in the field, will assuredly be served by study-circles, conferences, lecture courses, and the various other activities undertaken with a view to making known the Christian solution of the social problem * * *."

Turning to the duties of the Christian State, the Holy Father stated:

"It is the duty of the Christian state to concur actively in this spiritual enterprise of the church, aiding her with the means at its command, which although they be external devices, have nonetheless for their prime object the good of souls.

"This means that all diligence should be exercised by states to prevent within their territories the revages of an anti-God campaign which shakes society to its very foundations. For there can be no authority on earth unless the authority of the Divine Majesty be recognized; no oath will bind which is not sworn in the name of the living God. We repeat that we have said with frequent insistence in the past, especially in our encyclical "Caritate Christi": 'How can any contract be maintained, and what value can any treaty have, in which every guarantee of conscience is lacking? And how can there be talk of guarantees of conscience when all faith in God and all fear of God have vanished? Take away this basis, and with it all moral law falls, and there is no remedy left to stop the gradual but inevitable destruction of peoples, families, the state, civilization itself.'"

Pius XI concluded this great state paper on the most pressing of all problems of 1937—and of today since the message is timeless—by pointing to the eternal destiny of the Church, and thus by predicting the ultimate conquest of the Church of Christ, with the following reminder to all of the faithful:

"With eyes lifted on high, our faith sees the new heavens and the new earth described by our first predecessor, St. Peter. While the promises of the false prophets of this earth melt away in blood and tears, the great apocalyptic prophecy of the Redeemer shines forth in heavenly splendor: 'Behold, I make all things new.'"

It would be presumptuous for us to say more. We count ourselves as fortunate to be able to participate in this 22d anniversary of a message to which the tablet has given unswerving and consistent loyalty.

---

## The Challenge of the Soviet Economic Offensive

EXTENSION OF REMARKS
OF
## HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. HUMPHREY. Mr. President, on February 12 it was my priviledge to address the Economic Club of Southwestern Michigan in St. Joseph, Mich. The theme of my address was "The Challenge of the Soviet Economic Offensive."

I ask unanimous consent that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF THE SOVIET ECONOMIC OFFENSIVE

Today the world is confronted by a profound crisis, a crisis in which the cherished values of western civilization are challenged as never before.

We hear the word "crisis" repeated again and again in the screaming headlines about Berlin, Iraq, or the Formosan Strait so that we become numb and forget its deeper meaning.

It is perfectly true that there are many crises, but underlying all these specific challenges is a fundemental crisis. Some historians and philosophers have said that our generation is confronted with the greatest crisis of modern times.

The profund and many-sided world crisis is the result of three dynamic and interrelated realities, each of which is pregnant with dangers and oportunities—the challenge of modern technology, the challenge of the revolution of rising expectations, and the challenge of communism itself.

1. The fantastic progress in technological development has put mankind within reach of one of his greatest goals, the elimination of poverty. But his same technology ironically may be mankind's undoing. I need not remind an audience like this of the potential destructiveness of modern terror weapons made possible by new energy and means of transporting energy discovered by science. We should not blame science, but recognize that science is neither a savior nor a demon, but a source of power which can be used for good or ill. The basic problem is political and moral, not technical.

2. We have heard a great deal of the revolution of rising expectations in the economically less developed and politically noncommitted countries of Asia and Africa. The destiny of these people who are striving for or celebrating their independence may determine the destiny of the world within the next generation or two. Not everyone in the free world has grasped the political and moral significance of the ferment in these vast areas, but we can be sure the leaders of the Soviet Union have.

3. The third massive reality is the Communist challenge itself. Modern technology and the upheaval in Asia and Africa would themselves be sufficient cause for a world crisis. But the crisis is compounded by the existence of an aggressive and expansive political religion whose ultimate goal is world conquest. The high priests of world communism prefer to attain their goals without nuclear war if possible. But they have not ruled out either limited or total war if that seems necessary or expedient.

We make a great mistake, perhaps a fatal mistake, if we think of the Communist challenge as exclusively a military challenge, or even primarily a military threat. The challenge of communism is military to be sure, but it is also economic, ideological, political, and, in its deepest sense, it is religious. I say it is religious because the distorted Communist view of man and the world challenges the fundamental precepts of our Judeo-Christian value system.

THE EXPANDING SOVIET ECONOMY

Today I want to confine my remarks to the Soviet economic offensive. But I want to do this within the framework of the many-faceted Communist challenge and the larger world crisis.

It is one of the great ironies of American history that today we are being given a run for our money by the expanding and dynamic economy of a country which only a few short years ago we thought of as backward. This is a spectacle as humorous as the fabled tortoise and hare. Before sputnik streaked across the heaven, we assumed that we were the biggest, the fastest growing, and strongest economy in the history of mankind. And we were. We became smug and complacent. We refused to believe in increasing signs of growth in Soviet technology and productive capacity. The hare would win the race, paws down. We could stop for a short siesta under a sycamore tree and the poor tortoise, weighted down by the hard shell of socialistic controls, would not have a chance.

But while we slept the turtle plodded on, unnoticed and unobserved. Then came Sputnik I and subsequent achievements which proved beyond a shadow of doubt that the U.S.S.R. had made giant technological and economic strides. We were shocked. We were momentarily stunned. But we still did not awaken to the full reality. It was since sputnik that we allowed ourselves the luxury of a recession, and today we are still not out of the woods.

Alas, the race is no longer a race between a tortoise and a hare, but between two hares. But because of our hurt pride, our lack of a sense of urgency, and our deficit in leadership, we are still not running scared.

I would like to put a few facts on the record which if understood and taken to heart, will help us to run scared. By scared I mean properly afraid, and determined, not hysterical. Here are the facts:

1. We have consistently underrated Soviet economic and industrial achievements. We have underrated their progress in atomic energy, missiles, aircraft production, and even in some areas of consumer production. The sputniks and lunik should have shattered our rose-colored glasses, but even now there are people in Washington who calmly tell us that we are ahead in nuclear energy and the missile race. The Secretary of Defense has himself issued smooth and reassuring words to the American people, words which were characterized by one of our most respected columnists (Joseph Alsop) as "soothing sirup."

Now it's true that the laymen, and this includes most Members of Congress, do not know exactly where we stand in relation to the Soviet Union, in spite of congressional hearings to determine just that. Sometimes the experts disagree. But isn't it the better part of wisdom and valor to overestimate Soviet economic and military strength than to underestimate it? Wouldn't it have been better if the democratic nations would have slightly overestimated Hitler than vastly to underrate him?

2. The Soviet economy is growing at about three times the rate of the U.S. economy. Although accurate statistics are hard to come by most economists believe that the Soviet economy is expanding at a rate of between 6 and 8 percent a year. In contrast the American economy at present is growing at a rate of less than 2 percent. Since 1900 our economy, our gross national product (GNP) has grown at an average rate of 3 percent annually. From 1945 to 1952 it expanded at a rate of 5 percent. Since 1953 the rate has been about 2 percent.

Of course, the Soviet economy is not as big as ours. But the fable of the tortoise and hare is appropriate here too. While the hare takes it easy and permits himself the luxuries of needless recessions, the tortoise transforms himself into a hare. Economists tell me that for a short time last year the combined steel production of the U.S.S.R. and Red China exceeded the steel production of the mighty United States. This fact alone should make us run scared.

3. The Soviet Union manages its economy to serve national goals. The leaders in the Kremlin can slice the national income pie any way they wish, within the limits of endurance set by the long suffering Soviet people. This gives them a great advantage. They can plow back into the economy the capital necessary to guarantee the maximum economic development consistent with domestic and foreign policy objectives. They can channel scarce resources into high priority enterprises such as nuclear energy, missiles, steel, and certain industries producing items for export. They can curb consumer demand by promising better food and larger apartments in the near future. They can get their people to produce guns with the promise that by the end of the present 7-year plan they will be producing both guns and butter.

A good share of the Premier's 8-hour speech at the recent party congress in Moscow was devoted to explaining the goals of the 7-year plan. The overarching goal, he said, was to outproduce the United States of America in the 1970's.

"How," you may ask, "has a totally and centrally planned economy been able to do so much? How could they have gotten where they are without the natural incentives of profit and reward in a free enterprise system like ours in America."

The answer is that years ago the Soviet leaders departed from the orthodox doctrines of Marxism, and copied incentive and productivity ideas from the system they decried.

The Soviet Union does not really practice socialism or communism, but rather a system of state capitalism. The Red Chinese in their communes may not yet have learned this lesson.

THE SOVIET INTERNATIONAL ECONOMIC OFFENSIVE

We have referred to Soviet economic strength and the capacity of Soviet leaders to make the economy serve political purposes. Now let us turn specifically to the Communist international economic offensive in the areas of trade, aid, and investment.

1. The trade offensive: Today there are Soviet trade missions in many capitals of the world, including the capitals of some countries which have never had any trade with the Soviet Union. These missions are quietly negotiating commercial trade agreements. The Soviet Union has surpluses with which to bargain. Even though Russia is still poverty stricken as far as consumer goods are concerned, she is willing to compete in the world market.

Recently I heard a startling story about a Boston importer who purchased some sample microscopes for high school and college use from the Soviet Union. They cost roughly one-fourth of what similar instruments in the United States cost and they were of a superior quality. Perhaps the U.S.S.R. was dumping them; that is, selling them at less than cost. Whether she was dumping them or selling them at an honest price, the problem is serious. We are presented a tremendous challenge from a backward country. Only a few years ago one of America's top Russian experts said that the Soviet Union could not even mass produce bicycles. She has not only mass produced bicycles, and microscopes, but MIG jets, bombers, and perhaps she is now mass producing ICBM's.

We can expect the Soviet trade offensive to increase in tempo and volume in the months and years ahead.

2. The aid and investment offensive: The Soviet Union is an Ivan-come-lately to foreign economic aid. The United States blazed the trail with the mighty Marshall plan and subsequent programs of aid. And yet in this field in which we were pioneers we are being severely challenged. At the very time when many Americans are confused and unconvinced, when the very basis of economic aid is being challenged, the Soviet Union, according to all reports, is winning friends and influencing people through its aid offensive.

Apparently convinced that you "can't buy friends," the U.S.S.R. during the past 3 years has concentratel on capital investment as its major form of foreign aid. She has offered long-term, low-interest loans to the countries of the Middle East and Asia. There are extensive Soviet economic aid projects in the United Arab Republic and in seven south Asian countries—India, Burma, Afghanistan, Ceylon, Indonesia, Nepal, and Cambodia. The Soviets are helping to build a steel mill in India, bridges in Egypt, a cement plant in Afghanistan, a sugar factory in Ceylon, a tire factory in Indonesia and a hundred other projects designed to raise the living standards of these underdeveloped areas. In the past 3 years the Soviet Union has extended more than $1.5 billion in credits. Recently Mr. Khrushchev offered President Nasser aid to build the high dam across the Nile—the same type of aid which Mr. Dulles abruptly withdrew in 1955 and which many observers believe forced Nasser to seize the Suez canal.

The Soviet Union offers its development credits, and the necessary technicians, she

claims, without political strings attached. The offer is attractive, and we cannot blame underdeveloped countries for accepting it. In their great desire for economic development, they are reluctant to see the possible political implications of such generously offered help. At the beginning of the Soviet program her interest rates were better than needy countries could get elsewhere. And there were no explicit political strings attached. Further, the Soviet Union seemed to demonstrate with her sputniks that she could make as much technical progress in 30 years as the United States did in 100 years. Some of the people in these areas seem to prefer ruble diplomacy to dollar diplomacy.

The argument that a centrally planned, designed and controlled economy is inevitably and inexorably more powerful and productive than a free economy appeals to peoples who desire economic development, and who have no experience with the political restrictions which go along with Soviet-style planning. Regrettably, the Communist model is appealing. The fear of ideological and political penetration is not real enough to offset the economic appeal. We must do more—and we can.

WE MUST STRENGTHEN THE AMERICAN ECONOMY

These sketchy facts about the strength and growth of the Soviet economy and the success the Soviets have had in using trade and aid as instruments of their international objectives should help us to run scared. But I am afraid that may of us know the facts without really understanding them. We need a new sense of urgency if we are to accept the economic challenge of the Soviet Union to our domestic economy, and to our international economic objectives.

First, let me suggest how we can and indeed must strengthen our domestic economy if we are to meet the challenge successfully.

Our problem is not primarily an economic problem, but a political problem and a moral problem. The economists may not always agree, but in general they know how to increase productivity. The problem is whether we really want our economy to expand, and whether we are willing to take the risks involved.

To oversimplify the issue, and to make comparisons, there are two competing philosophies about our national economy.

The one I would call George Humphreyism—this philosophy holds that the greatest danger to the United States is inflation, perhaps a greater danger than the threat of communism itself. We must at all cost, according to the former Secretary of the Treasury, prevent inflation, even if it means cutting back in our rate of growth, even if it means 4 or 5 million men unemployed and many others underemployed, even if it means that our industrial plants are working only to 75 or 80 percent capacity, even if it means a recession such as the one we recently went through. Unemployment and underproduction are preferable to full employment and high production, according to this theory, because this is the only way to prevent inflation.

Now, we are all opposed to inflation—either of the galloping or creeping variety. I think it is significant that in the past few years, while our economy has remained stagnant, prices have literally soared. The answer to price stability does not lie in economic lag. Growth in the economy is not only desirable and necessary, but consistent with a price stabilization program. Here are some of the things we must consider:

First, and most obvious, the U.S. population is growing by 3 million persons a year, and with our present lag in productivity we can hardly stay where we are.

Second, if we are really going to take the Soviet economic offensive seriously, we must have sufficient production to keep up with her—militarily, scientifically, and every other way.

The President's budget and budget message were obviously influenced by George Humphreyism. I hope that the Democratic Congress will be instructed by a more dynamic and imaginative philosophy—a philosophy which believes in the capacity of a free economy to be productive without being inflationary.

TOWARD A DYNAMIC ECONOMIC OFFENSIVE

In the area of foreign economic policy the administration, partly in response to the Soviet challenge, is taking some steps in the right direction, but the escalator of history may be moving more rapidly in the other direction. We should build a stronger economy at home in order to do what necessity and prudence demand abroad. Our highly productive economy, even in its present less-than-dynamic state, makes it possible for us to do more than the administration wants us to do. Our posiion of leadership of the free world places upon us a moral responsibility commensurate with our power and wealth.

I would like to suggest a three-point program for strengthening our present economic offensive in the world, a program designed to do what we are best qualified to do.

1. Increase the flow of trade with other countries: Most economists agree that the free world would be strengthened by the lowering of trade barriers among nations. They also believe that the U.S. economy as a whole will benefit from freer trade, although they know that some industries will suffer. But as Adlai Stevenson once put it: "We shall have to make the choice between relatively minor adjustments caused by increased imports or major adjustments caused by decreased exports."

The United States is a wealthy Nation. With only 6 percent of the world's population, she produces over 40 percent of the world's goods and services. Yet our country is dependent on imports from all over the world. If these imports were to be completely cut off, our daily life would change drastically until adequate substitute for vital imports could be found. Our automobiles, telephones, radios, television sets, and a hundred other modern necessities would become useless when parts depending on imports would wear out. We would be threatened with mass unemployment. And our defense program would collapse.

Every automobile needs 38 essential materials which are largely imported. Forty-eight imported products go into every telephone. Not a single pound of steel can be made without manganese; nine-tenths of our supply of this vital ore is imported. We import all of our chromium and tin, ninety-nine percent of our nickel, 65 percent of our bauxite (essential to making aluminum) 42 percent of our copper, and so on.

On the average day about 418,000 tons of imports, worth $42 million, arrive at American ports. Only about one-eighth of these imports are finished manufactured products which can compete with American made goods. At the present time our annual imports total more than $11 billion.

Other countries need our products and we need theirs. We need to export in order to buy the necessary imports for our own economic health. A substantial loss of foreign markets could damage our entire economy. The United States cannot export unless other countries have dollars to buy our products. To get dollars they must sell to us. Trade is a two-way street. If the traffic slows down on one side of the street, it will have to slow down on the other. A balanced and high-level flow of world trade makes for worldwide economic health. The interdependence of nations is nowhere more clearly apparent than in the economic realm.

This is not the place to discuss the technical details and procedures for increasing trade. I merely want to make the point that we must seize every opportunity to move toward this desirable goal, and to take appropriate governmental action to help those industries which may suffer undue hardship, because of increased imports.

I might say in passing that I believe international trade should not be restricted to the nations of the free world. I favor certain types of trade with the Communist bloc. This will, of course, have to be undertaken with proper regard for legitimate security considerations.

2. Utilizing our agricultural abundance: One of the most vexing problems facing our country is the so-called agricultural surpluses resulting from overabundance. This is a serious domestic problem which has far-reaching international implications. It is clearly to the advantage of the United States to use stored-up food and fiber before it becomes worthless. If we simply give it away to needy countries without regard for normal marketings or opportunities to benefit the recipient country as well as ourselves, we run the risk of upsetting world market prices which may result in injury to the economies of other nations. Even if we sell our farm surpluses at the world market price, and advance credit to purchase them, we will be competing with other countries whose need for export may be greater than ours—unless we find and use economic tools for converting our food to useful purposes, that save, rather than detract from, our basic foreign policy objectives.

There is no easy solution to this complex problem. We always have to ask ourselves three questions: What is good for the American farmer? What is good for the U.S. economy? What will best serve our goals of helping to strengthen our free world allies and the uncommitted nations?

In answering these questions wise statesmenship must make difficult and discriminating decisions which honor the legitimate claims of each competing interest.

I believe a way out can be found. I believe the utilization program under Public Law 480 can and should be extended and enlarged so that our farm abundance can serve the needy overseas without hurting our closest allies. I will support efforts in this direction. I regret to say that the administration plans to spend $14 million less under Public Law 480 for fiscal 1960 than is being spent during the current year.

3. A 5-year development loan program: In the foreign-aid picture I have supported the Marshall plan, the point 4 program of technical assistance and direct grants for economic and military aid. I have supported U.S. participation in the technical-assistance programs of the United Nations. I think each form of assistance has a proper role to play. I would support an expanded program of technical aid under the point 4 program. But I am firmly convinced that the greatest opportunity for achieving substantial economic development in the politically uncommitted areas lies in a greatly expanded capital loan program.

In the 19th century the London capital market provided vast sums of money for the development of economically backward countries, including the United States. Today, the United States is the largest single source of capital, and yet the proportion of our gross national product going into development abroad is far smaller than that of Great Britain a hundred years ago.

In the spring of 1957, when congressional support for foreign aid was at its lowest ebb, up to that time, three distinguished research agencies recommended that the United States put foreign aid on a long-term basis of perhaps 20 or 30 years and that our Government appropriate the $2 billion a year for economic

development. (The three research agencies were the Committee for Economic Development, a business-sponsored organization; the University of Chicago Research Center in Economic Development and Cultural Change; and the Center for International Studies at MIT.)

This recommendation for a greatly increased air program was not a harebrained scheme, but the product of some of the finest scholars in the country—men who know the capacity of the American economy and the requirements of leadership in a world threatened by communism. And, I might add, men who represent the finest humanitarian traditions of America.

With this type of backing, I do not hesitate to propose a $10 billion development loan program over a 5-year period. We spend $50 billion a year on defense and perhaps even this is not enough. Can we not invest 5 percent of this amount in the future of Asia and Africa? I believe we can. I believe we should.

I believe the program should consist largely in long-term, low-interest loans which can compete effectively with what the Soviets are doing. I believe that the projects for which loans are provided should be thoroughly appraised by competent specialists so that the capital will be well spent. We must take into account the absorptive capacity of the recipient country. We must avoid waste and corruption.

There will be risks, but the need is great. The challenge is inescapable. President Truman's point 4 idea was called "a bold new program." It was new, but the majority in the Congress never permitted it to become bold.

Since then the urgency has increased. The time for a bold new program is upon us. And I believe that there are more and more members of both Houses of Congress who are willing to match the challenge of our times with courage and boldness.

Walter Lippmann recently said something which every lawmaker and every administrator would do well to ponder. He said if you want public support for a Government program, make it big, bold and imaginative—appeal to the public's sense of responsibility and willingness to sacrifice. In attempting to second-guess the public, I am convinced that political leaders too often sell them short.

Massive investment is essential, and most of the capital must come from private sources. It cannot and should not come only from governments. In fact, governments should invest only when private sources are unable or unwilling to meet the legitimate needs for development. Private investors cannot afford to take large risks. Recipient countries should, of course, do all within their power to make private investment attractive, promising a reasonable return for the investor. I am glad to say that India has recently taken several significant steps to make private investment attractive. Any potential investor should look into new opportunities in this, the pivotal nation in Asia.

But it is not possible for an underdeveloped country to remove all risk to private investors. The countries needing aid most desperately often are the very ones where the risk is greatest. It is in these cases of great need and risk, where both the economic and political stakes are high, that government loans are required.

And if the free world does not provide investment capital, we can be sure the Communist bloc will. It is unfortunate, but understandable, that the fear of communism may prompt us to do what we should have done all along and what Great Britain in fact did in the 19th century.

CONCLUSION

I want to conclude by applauding Mr. Douglas Dillon, the Under Secretary of State for Economic Affairs, for his leadership in the area of long-term investment loans. I support him. But I fear that he has not gone far enough. Perhaps he is afraid that the Congress will not support him. Or, more likely, he may be afraid that the President will veto a more dynamic program.

Our Nation and our people face a massive challenge today.

The economic, political, ideological, and military offensive of a dedicated and determined foe confronts us at every turn.

Can the American people respond to this challenge with courage and wisdom?

The answer is "No," if we continue to sweep unpleasant facts under the rug of a complacent optimism. The answer is "No," if we are content with smooth words and soothing sirup from a man whose main task should be to jolt us from our lethargy. The answer is "No," if we continue to prefer tail fins and mink-lined suburban nests to first-rate schools and a responsible, if costly, foreign policy.

But the answer need not be "No." I firmly believe that the American people have the moral resources and political wisdom to respond with courage and determination. I know we have the economic resources to do the job that needs to be done. We can do the job if we have leaders who lead, leaders who can impress us with the deeper meaning and urgency of the crisis.

There is no substitute for leadership, leadership hardheaded enough to face the facts of life and warmhearted enough to honor the cherished values of our Western religious heritage.

## Fair Trade Will Bankrupt Those It Should Help

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, in 1906 the United States brought a civil action to enjoin the National Association of Retail Druggists from conspiring to control the marketing of drugs and proprietary medicines by fixing prices and by blacklisting price cutters. In 1907 this case was ended by consent decree enjoining the further operation of the combination.

Today, the druggists' Washington lobbyists are still at it. I cannot believe the druggists back home understand what is being asked in their name.

Fair Trade (H.R. 1253), we are told, is their legislative need; that Congress must set aside the antitrust protection for businessmen and consumers alike and permit manufacturers to set retail prices by decree, regardless of a free market economy.

All right, forget the consumer. How about the retail druggists or other retailers? This fair trade law supposedly to help and protect them will bankrupt them. How? By holding an umbrella over the big stores, chains, and department stores who can handle their own brand or trademarked items. While the small retailer must sell at the manufacturers' stipulated prices, the big stores can undercut them, free to price as they please.

A further irony, the manufacturer, after setting the price of his trademarked item, can even make the same product for the big merchant who can set his own price below the manufacturer's comparable trademarked item. Of course, at the outset, the manufacturer will do fine; he is protected either way. And the small retailer? He will go broke. The fair trade law would prevent his setting his own prices to protect himself.

## Monetary Policies as Related to the National Economy

EXTENSION OF REMARKS
OF
### HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thought-provoking statement by Dr. Gardiner C. Means, a noted economist, which was made before the Committee on Government Operations in the House of Representatives on March 25. This statement discusses the causes of inflation.

Mr. Means has some recommendations with which I do not agree. However, when we are all concerned over what we can do to hold down the increasing cost of living, I recommend very highly consideration of Mr. Means' statements.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BEFORE THE HOUSE COMMITTEE ON GOVERNMENT OPERATIONS BY DR. GARDINER C. MEANS, MARCH 25, 1959

Mr. Chairman and members of the committee, 2 weeks ago the New York Times carried a remarkable editorial entitled "An Aroused Reserve Board."[1] This editorial described the "extremely serious dilemma" "presented to the monetary authorities" by the new type of inflation which has developed and has come to be referred to here in Washington as administrative inflation. The editorial points out that "general credit controls are too blunt an instrument for dealing with this type of price rise. If applied with sufficient vigor, they can slow down the whole economy and produce widespread disemployment, thus creating the impression that the Federal Reserve Board was neglecting its responsibilities under the Employment Act of 1946." Further, the editorial says of the Board "that a point has certainly been reached when it finds itself forced into the position of 'taking the rap' for inflationary policies that are socially and economically unsupportable, but with which it is not equipped to deal."

Two days before, the Washington Post had carried an editorial on the same subject under the title "The Price Issue Is Joined."[2]

[1] Mar. 14, 1959.
[2] Mar. 12, 1959.

This editorial said: "There is a growing concensus that present fiscal and monetary controls of the Government simply cannot cope with the administered price sector of the economy where concentrated industries like steel can, as they have shown, defy sagging demand, increase prices and profits, and thus seriously retard economic growth." The editorial closed with the following words:

"So the issue is joined. If the makers of steel and autos and other heavy manufacturing and the unions which serve these industries will now acknowledge their power, accept the social responsibility that goes with it and discharge it in the public interest, the American economy can avoid further regimentation and control. If they will not, Congress and the administration will be under mounting pressure to devise effective restraints."

(Offer editorials for the record.)

This revolution in economic thinking grows out of 2 years of hard work by the Senate Antitrust and Monopoly Subcommittee under the chairmanship of Senator KEFAUVER. In the first hearing held on July 9, 1957, Senator KEFAUVER said:

"In opening there hearings on administered prices, the Subcommittee on Antitrust and Monopoly is trying to come to grips with what is probably the Nation's current No. 1 domestic economic problem—the problem of inflation. We are concerned particularly with the extent to which concentrated industries may contribute to this problem."

I do not need to summarize these hearings for you. It is all in the record, the testimony of leading independent economists who had studied the behavior of administered prices and showed how in recent years the inflation in wholesale prices was largely in the concentrated industries and was a product of administrative discretion, not a product of excess demand; the evidence in the steel and automobile hearings which confirmed the diagnosis of the economists; and the more recent hearings in which the evidence was reviewed and attacks on the diagnosis were overborne.

The evidence of these hearings can in large measure be summarized in a single chart. This chart, taken from the hearings, is marked "Chart IV," and is included here on the next page [not printed in RECORD.] It shows the character of the inflation in the Wholesale Price Index from 1953 to October 1958. Each group of commodities included in the Wholesale Price Index is represented by a column. The height of the column indicates the change in the price index for the specific group from 1953 to October 1958. Its width indicates the weight which the group carries in the wholesale index. And the area of each column represents the contribution each group made to the 8 percent increase in wholesale prices during the period. The black columns represent commodities which are produced for the most part by concentrated industries in which price administration plays a major role. The light gray columns represent commodities the bulk of which are market dominated. And the dark gray columns represent mixed groups with some market dominated and some administration dominated prices.

As you can see from the chart, the great bulk of the wholesale price inflation was in the concentrated industries. Steel alone accounted for nearly a quarter of the rise in the index and the steel and steel using industries accounted for two-thirds of the rise. Each of the administration dominated groups rose substantially. In contrast, the market dominated groups rose little or actually fell in the same period. This is what is meant by an administrative inflation.

Now this type of inflation is in complete contrast with the classical type of inflation such as we had after World War II and in the Korean war. Those inflations were demand inflations in which there was too much money chasing too few goods. As a result of the excess demand, market-dominated prices rose first and most while administration-dominated prices lagged behind. Then, when there was no longer too much money chasing too few goods, market-dominated prices dropped back and administration-dominated prices continued to rise until a new balance of prices had been established. According to my analysis, this balanced condition had been reached by 1953.

The importance of this distinction lies in the fact, now coming to be widely accepted, that while a tight money policy may be able to control a demand inflation, it cannot control an administrative inflation. It has become clear that limiting demand by a tight money policy can create depression and unemployment but administrative inflation continues. Thus, the steel industry last summer raised its prices 3 percent in spite of the fact that its operations were down to 60 percent of capacity and in spite of the great price increases that had already occurred since 1953.

Also, as I pointed out in my testimony of 2 weeks ago before Senator KEFAUVER'S committee, there is convincing evidence that there has not been demand inflation at any time in the last 6 years. The detailed evidence is available in my recent testimony, a copy of which I am filing with your committee. The key points in that testimony are as follows: (1) 1953 was a year of high employment without inflation as the President's Economic Report for January 1954 makes abundantly clear; (2) in every year since 1953 unemployment has been practically a million or more greater than the 1.9 million unemployed in 1953; and (3) manufacturing capacity has expanded faster than production since 1953. Thus at no time since 1953 has demand been pressing on the labor supply or manufacturing capacity as hard as it did in 1953 when there was no inflationary pressure.

This last is so important that I will introduce two charts to emphasize it. Chart 5 [not printed in RECORD] is derived from a chart in the President's Economic Report for January 1959 and shows indexes of manufacturing capacity—the smooth rising line—and manufacturing output—the fluctuating line. As you can see, at no time since 1953 has production approached as close to capacity as in that year. The same is true of durable goods production and capacty as shown in chart 6 [not printed in RECORD]. Not only have we not had demand inflation but we have not even had sufficient demand to maintain full employment.

Finally, I want to emphasize the importance of the Federal Reserve to control administrative inflation by introducing one final chart. The top line in chart 10 [not printed in RECORD] shows industrial production since 1953. The lower line which moves by steps, represents the rediscount rate of the New York Federal Reserve Bank—which is a rough measure of the tightness of Federal Reserve policy. The third line represents the real stock of money outstanding (demand deposits and currency adjusted for changes in consumer prices) and shows the effect of Reserve policy and price changes on the real money supply. As you can see, for most of the time since late 1955 there has been a tight money policy with a high discount rate; there has been a shrinkage in the real money supply; and there has been a mild stagnation or depression in industrial output. Yet administrative inflation continued. Clearly the tight money policy was not successful in stopping administrative inflation.

In this context of simultaneous administrative inflation and depression, section 2 of H.R. 4870 assumes great importance.

Here I want to draw a very sharp distinction between the immediate problem of preventing administrative inflation so that monetary and fiscal measures can be used to bring about full employment and the more basic but not so immediately pressing problem created by the pricing discretion in concentrated industries.

The Senate Antitrust and Monopoly Committee is continuing its hearings on the latter subject and has not only disclosed the administrative character of the recent inflation but has made considerable progress on the more basic problem. But time will be required to work out a satisfactory solution, and whether the hearing function such as is authorized in the Reuss bill will enter into the solution remains to be seen.

However, for the immediate problem of achieving full employment without serious administrative inflation, I regard public price hearings and publication of the facts as having an important role to play. I would be very strongly against the adoption of price and wage controls except as a distant and last resort when other measures had failed. But public hearings on prospective or actual price increases (and where necessary wage increases) could serve a very useful purpose where there was serious danger that such increases would threaten the stability of the economy and impede economic recovery. I would not contemplate a large number of hearings in any 1 year but I would expect that the relevant data on costs, wages, productivity, etc., would allow the public to distinguish between legitimate and nonlegitimate price increases and bring home to those in control in the concentrated industries the policies which would represent responsible behavior toward economic recovery.

Also I believe the effectiveness of such hearings could be reinforced if some of the joy in raising administered prices to increase profits were removed by adopting a graduated antiinflation tax. The evidence presented before the Senate Antitrust and Monopoly Committee makes it clear that the concentrated industries are the chief source of administrative inflation. Therefore an excess profits tax limited to the larger corporations, say those with assets over $100 million, could be effective. Presumably it would only be operative for profits above an ample rate of return on capital and then would take an increasingly large proportion of the excess as the rate of return was higher. Such a tax would reinforce the effect of hearings on specific prices. It is quite possible that these two measures alone would be sufficient, along with the public education involved, to prevent serious administrative inflation while monetary measures were used to expand demand to the extent required for full employment.

Also the basic purpose of these measures could be strengthened by one additional action. At the present time there is great ambiguity as to the responsibility of the Federal Reserve Board with respect to inflation. The Employment Act of 1946 places on the Board (as on other agencies of Government) responsibility to aim its policies at "maximum employment, production, and purchasing power." Also it is generally accepted that there is an implicit direction to maintain price stability. Since the Board does have the powers which could prevent demand inflation and cannot control administrative inflation without creating excessive unemployment, the direction to aim at high employment and price stability involves

some measure of contradiction. It would be possible to remove this contradiction by a joint congressional resolution which (1) distinguished between demand and administrative inflation; (2) absolved the Federal Reserve Board from responsibility for controlling administrative inflation and reiterated its responsibility for aiming its policies toward achieving high employment and preventing demand inflation; (3) accepted the responsibility of the Congress to find other ways to prevent serious administrative inflation.

With such a directive the objectives of the Board would be clear and, in my opinion, it could adopt policies which would bring about full employment without demand inflation while these other measures prevented serious administrative inflation.

Of course an expansion of demand which reestablished full employment such as last existed in 1953 would involve some rise in market dominated prices. If the administrative-dominated prices are held down, this inflation would bring market-dominated prices more into line with administration-dominated prices and would be a necessary cost in economic recovery. (The alternative of forcing down administration-dominated prices to the necessary extent seems to me impractical.) With little rise in administration-dominated prices, the necessary reflation might involve as much as a 3-percent rise in the average of wholesale prices, but once recovery was complete, there need be no further rise, provided administrative inflation is prevented. I believe the Federal Reserve Board has ample powers for preventing such a reflation from crossing the line of full employment and becoming a demand inflation.

With respect to the provisions of the proposed bill, I am not an expert in government organization and do not feel competent to discuss just what agency should be made responsible for the new hearing function or what its powers should be. But there is one matter in the present draft which does fall within the field of my competence.

The draft speaks of "price increases, proposed in industries," etc. (p. 2, line 25, and p. 3, line 1). In practice, price changes in unregulated industries are seldom proposed in advance. On the other hand, it is often expected that price changes will occur before they do. One could broaden the language by substituting "prospective" for "proposed." Also, there may be situations in which a price change has already been made and needs to be investigated. This could be covered by adding "actual." My suggestion is, therefore, that this section should read "price increases, prospective or actual in industries, etc."

In closing I wish to say that I am not a perfectionist and do not expect that any set of measures short of price controls will entirely eliminate administrative inflation but I do believe that the measures implicit in this bill would, if reinforced by measures such as an anti-inflation tax, could go a long way to minimize administrative inflation and allow the Federal Reserve Board to reflate to the extent necessary for full employment.

## Editorial Applause of Admission of Hawaii to Union

EXTENSION OF REMARKS

OF

## HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. KEATING. Mr. President, numerous editorials in recent days have applauded the admission of Hawaii as our 50th State. This is fitting, inasmuch as many of our nation's newspapers have for years been in the forefront of efforts to add the 49th and 50th stars to our flag.

Within a few days I will be visiting Hawaii and seeing once again its great beauty, bustling activity and bursting progress. I am particularly pleased that it will be my privilege to be the first member of this body to visit the islands following their admission to the Union.

Because the editorial backing for our 50th State expresses eloquently the feelings of the American people, I ask unanimous consent that a number of these editorials from various sections of the country be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Elmira (N.Y.) Star-Gazette, Mar. 13, 1959]

ALOHA TO 50TH STAR IN OLD GLORY

After 50 years' dreaming, Hawaii has become the 50th star in the American flag, following by a few months the admission of Alaska.

The islands were annexed to the United States in 1898, 2 years later becoming a Territory. It was 3 years later that the Congress received the first petition to give Hawaii the status of statehood.

Hawaii will be one of America's most beautiful States, and surely one of her most loyal. The island folk have been true friends, the friendship brought to the most terrible of tests in 1941 when the Japanese bombed Pearl Harbor.

The history of the islands is fascinating. Mark Twain knew their beauty and wrote about it, his letters from the Sandwich Islands, as they were then known, being among the foundations of his literary career.

The flag designers have a new problem. They had very little trouble in arranging seven rows of seven stars when Alaska became a State; now the starry field may have a row of eight in the middle.

This is a happy day for Hawaii.

It's a happy day for all America.

[From the Wilmington (Del.) Journal-Every Evening, Mar. 12, 1959]

RIPE FOR STATEHOOD

Hawaii is halfway a State today and before the week is over it seems certain that this island Territory will have virtually achieved the full status of statehood it has sought so long. The Senate, long a stumbling block, has approved a statehood bill by a vote of 76 to 15 after a single day's debate. Everything indicates that the House will promptly follow suit and that in due course a 50th star will be added to the flag.

In area, all of the 20 Hawaiian islands put together are only a little more than 100th the size of Alaska, the youngest of the present 49 States. A little bigger than Connecticut and a little smaller than New Jersey, Hawaii will rank among our smaller States. But there is no doubt at all that it can claim first rank for loveliness with its spreading beaches leading up to flower-filled semitropical valleys watched over by brooding volcanoes. If the frozen wastes of Alaska are expected to attract hordes of pioneers, what can we expect the soft and lovely islands of the Pacific to do?

We take great satisfaction in the success of this latest move for Hawaiian statehood because we have been urging Congress to approve it for years. It has seemed to us that Hawaii has long since earned the right to statehood and that the objection raised were largely irrevelant and frivolous. If the islands have a polyglot population, so has the mainland; if radical labor leaders dominate their shipping, what shall we say about our own Jimmy Hoffas and Dave Becks? A territory with a population of more than half a million, which has proved its loyalty under the stress of war, and which has served nearly 60 years of apprenticeship surely is ripe for the statehood it now stands to gain.

[From the Milwaukee (Wis.) Journal, Mar. 13, 1959]

WELCOME TO THE UNION

The satisfaction and pleasure of most mainland Americans today must be as nothing to that of 585,000 Hawaiians. Since 1903 they and their forefathers have doggedly sought the admission to the Union that has now been voted. Equally important, they have tried in every way to deserve admission. Their devotion and loyalty were best displayed in the trying days after the Japanese attack on Pearl Harbor that plunged this Nation into World War II.

All of us on the mainland will benefit from having Hawaii as the 50th State. Acceptance to national equality of its melting-pot population of Japanese, Caucasians, Chinese, Filipinos, and native Hawaiians will win the United States friendship and understanding throughout the nonwhite world. The voice of its people should be valuable in guiding our dealings with Asia.

But most benefits, economic and political, will come, as they should, to the Hawaiian people, at last an integral part of the United States.

And so, in this moment of Hawaiian joy and celebration, may the Journal—which has urged statehood at least since 1940—say:

To the happy crowds in Honolulu's Bishop Street, to the workers in the pineapple fields of Oahu and the cane fields of Kauai, to the cowboys of the big island, to the leimakers and the beach boys of Waikiki, to the rice-growers of beauteous Hanalei Valley, and the coffee raisers of the Kona coast, to the workers at historic and consecrated Pearl, to the guides pointing the way to Kilauea Crater and Waimea Canyon, to the hula dancers and the ukulele players everywhere, to all in the islands:

Congratulations, welcome, and aloha, fellow citizens of the 50th State.

[From the Idaho Evening Statesman, [Mar. 14, 1959]

GREETINGS TO HAWAII

Idahoans join other Americans in welcoming Hawaii to our family of States as its 50th State and extend their felicitations to the Paradise of the Pacific with the hope and prayer this formal union will bring its people the fruition of their fondest dreams and ambitions.

While not formally a member of the Union, the action of both Houses of Congress and the certainty that President Eisenhower will sign the bill and the people in Hawaii will approve some 60 to 90 days hence in a general election, Hawaii is in for all purposes. When the results of that election are certified, the President will issue a proclamation admitting Hawaii as the 50th State.

There must be a great amount of jubilation in the Pacific paradise, which for more than 40 years has struggled for a place alongside of the other States. Without going into the details of the opposition during those earlier years, there is some evidence indicating special interests was part of that opposition. During recent years opponents were successful in denying Hawaiians statehood for other reasons, but special interests clothed them. The opposition this time was the scarecrow of communism, but it didn't work.

Idaho, admitted to the Union in 1890 as the 43d State, is somewhat larger in population and size than Hawaii. As an older and bigger brother, Idaho says "aloha" and may your star, ours and others, gleam to-

gether as one beacon of light that will shine on the hoped-for golden years ahead, that a neighborly pursuit of happiness can harvest peace among all nations, in our hearts and souls. May all our unintentional discourtesies be likened to the possible slips on your sidewalks, as you warn, because of fallen flowers.

---

[From the Rock Island (Ill.) Argus, Mar. 13, 1959]

NOW HAWAII

The States will soon number a round half hundred. And the flag makers have another job on their hands.

Senate approval of statehood for Hawaii was assured when 56 Senators, more than a majority, sponsored the bill for admission, and now the Senate action has been followed by House approval, making admission a certainty as soon as formalities are carried out.

The strategy of admitting Alaska first, adopted in the last session, appears to have worked. The Democrats got two new Senators out of it and could afford to take a magnanimous attitude toward Hawaii, which leans Republican, while the Republicans were anxious to pick up a couple more seats.

Opposition came chiefly from the South, which fears Hawaii will supply new votes for strong civil rights legislation.

As a matter of fact, Hawaii can give us a good lesson in racial tolerance. Having a population of 613,000, it is 23 percent Caucasian, 37 percent Japanese, 17 percent Hawaiian, and the remainder consisting of Filipinos, Chinese, Koreans, and Puerto Ricans. They get along under conditions almost as idyllic as the climate of Hawaii.

Hawaii has been knocking at the statehood door for 40 years and has fully earned the right to admission.

It is just 26 seconds away from Washington by telephone, and with the arrival of the jet plane is only a few hours away by air travel.

It is almost three times as populous as Alaska. Its population exceeds that of Delaware, Nevada, Vermont, and Wyoming.

It is in good financial shape, paying more taxes into Washington (being subject to the regular U.S. income tax although having no vote on it) than some 10 States.

Hawaii is at the crossroads of the Pacific, where East meets West, and military leaders have testified to its importance to our national defense.

A good deal was said about communism among the longshoremen of the island under control of Harry Bridges. But that is just as true of longshoremen of the Pacific coast whom he controls. The people of Hawaii have demonstrated their patriotism to a high degree with their volunteers and support of the war effort in World Wars I and II and the Korean war.

We should feel as proud to accept them as a member of the Union as they are to enter.

---

[From the Albany (N.Y.) Times Union Mar. 13, 1959]

OUR 50TH STAR

A bipartisan surge in Congress has swept Hawaii into statehood like the roll of the surf that beats at Waikiki.

It was a surge of strength derived from the will of the American people, who favored statehood 8 to 1 in a public opinion poll last year. Similarly it was their will less than a year ago that broke through parliamentary barriers and brought about congressional approval of statehood for Alaska.

The Hearst newspapers, as they did on that occasion last June when the 49th star was born, now join in the elation of the residents of our beautiful 50th State. For more than 25 years we campaigned for statehood for Alaska and Hawaii, sharing with them the disappointments of the various setbacks, and uniting with them in determination for eventual victory.

When that day came for Alaska it was inevitable it would soon follow for Hawaii, particularly since Hawaii voluntarily stood aside to give Alaska a clear track. It has been a paradox that when the two causes were joined they had less chance than when pursued singly.

This prosperous island area of more than 500,000 people has been a bulwark of our defense as a Territory. It will be an even stronger one as a State, according to such military authorities as President Eisenhower and General MacArthur.

Equally important is the tremendous psychological asset of statehood. In the words of Interior Secretary Fred Seaton, Hawaii is "a picture window through which peoples of the East look into our American front room."

To our new, vital State: salute.

---

## W. C. "Bill" Berntson, President of the Twin City Retail Druggists Association

---

EXTENSION OF REMARKS

OF

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. HUMPHREY. Mr. President, recently elected as the new president of the Twin City Retail Druggists Association was W. C. Berntson. I have known Bill Berntson for many years. He is a fine druggist, and, more important, a superior person. In the February issue of Minnesota Pharmacist there was published an excellent feature article sketching his life. I ask unanimous consent, Mr. President, that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR COVER PAGE: W. C. "BILL" BERNTSON, PRESIDENT OF THE TWIN CITY RETAIL DRUGGISTS ASSOCIATION

When Bill (W. C.) Berntson came up to the office to tell us the story of his life, he said he was following Senator Popp's advice and came attired in blue trousers and brown coat. What was good enough for the Senator was good enough for Bill, too.

Bill Berntson took over as president of the Twin City Retail Druggists Association at the annual banquet and meeting. Thor Goldner, retiring president, handed over the gavel of authority to W. C., and he will hold that office until next year's election.

A former farm boy, Bill Berntson was born in Rush City, Minn. Bill was one of a family of six children, four boys and two girls. He was the end of the line, the baby of the family, and received his primary education in a one-room schoolhouse near Rush City. Bill lost his father when he was 13 years old, so his mother moved the family to Rush City to enable the children to get to school more easily. By then, Bill had reached high school age and enrolled in the Rush City high school. During those schooldays, he worked as a delivery boy. In 1922, Henry Sommers, the local pharmacist and drugstore owner, asked him if he would like to have a job in his drugstore. Bill happily accepted. He worked for Mr. Sommers until he completed his high school education.

Bill became quite interested in pharmacy while working in that drug store. He was also much impressed with the power of medicine. His sister, who was next in age to him, had become quite ill. The family doctor was able to help her to a full recovery with a good prescription. This intrigued Bill and made him curious about these drugs that could cure. These two experiences had an influence on him and in the fall of 1924, he enrolled in the College of Pharmacy at the University of Minnesota. The complete pharmacy course in those days, took only 3 years. In order to supplement his income and help with his school expenses while at the university, Bill worked at Heller's drugstore and also Conger Bros. store on the corner of Selby and Mackubin in St. Paul. Bill says that one of the main reasons he chose pharmacy as his career, was because the hours seemed so appealing and regular. (But he soon found out differently.)

The days he spent as a student in the College of Pharmacy, brought him into close association with the instructors. Names that are still very familiar—Dr. C. V. Netz, Dean Wulling, and Dr. Rogers. He still appreciates all their efforts in his behalf.

Bill was graduated in 1927 and began his career as a registered pharmacist in the Conger Brothers store at 349 University Avenue in St. Paul. He worked there 4½ years. Bill recalls that one of the chief sidelines at the store was—paint. They carried a complete line. He felt that he needed much broader experience in pharmacy and merchandising and left the Conger store to work for Idziorek Brothers, 43d and Nicollet in Minneapolis. He later took over as manager at the Campus Pharmacy in South Minneapolis.

After a couple more moves during those bad depression years, a time which saw many businesses biting the dust, Bill felt compelled to strike out on his own. In 1935, he purchased what he fondly refers to as "the little cubby hole" at 1082 Thomas Street in St. Paul and finally got his name on his own store. He spent 5 years in the little shop. The first years were pretty lean, but he managed to keep his head above water.

The economic situation of the world and Bill Berntson was in better shape in 1940 and he started to notice the interest folks were taking in the suburbs. He sold his little shop on Thomas Street to Frank Keller and moved out to Falcon Heights—to the corner of Snelling and Larpenteur, where he is still holding forth today. Nineteen years later, the words "Berntson" and "drug store" are synonymous to the folks in Falcon Heights. He was a pioneer resident in that area and remembers pretty vividly the pheasants that inhabited his front yard in those days.

Bill Berntson is a family man. Just like his father before him, Bill had a family of six children, four boys and two girls.

During the early days of his career as a registered pharmacist, while working at Conger Bros. on University Avenue, a young Irish lass by the name of Kitty (Catherine) Sullivan came into the store one day to buy a postage stamp. The young pharmacist cleverly inquired whether she wanted "raspberry or lime?" (His way of determining 1 cent or 2 cents.) The repartee developed into a friendship, a romance, a marriage, and a wonderful family. Bill and Kitty were married on May 22, 1929, and are looking forward to their 30th wedding anniversary in May of this year. Thirty years together, some filled with all the good things life has to offer and some sad; some lean. One of the sad days, was the day when the Berntson's lost a daughter in 1957.

Bill and Kitty will soon have two padres in the family. Terry Berntson is a student at the St. Paul Seminary and expects to be ordained a Catholic priest in the class of 1960. Son Tommy is a member of the Salesian Order and is studying for his ordination into that order at Newton, N.J. The

Salesian Order is not too well known in this part of the country and requires a longer study period to qualify for acceptance. The Salesians were founded by Don Bosco and are well known for the work they are doing with youth in operating vocational schools and camps for underprivileged boys. Two of the younger boys are students at St. Rose of Lima parochial grade school and one daughter is now in the sophomore class at Our Lady of Peace High School in St. Paul.

Bill believes in the TCRDA and the benefits to be derived from membership. He feels that even the sociability afforded by the membership is helpful in solving some vexing problems. When you know your neighbor, it's easier to talk over common problems and come up with an answer that is acceptable to both.

So, W. C. Berntson, 1959 is all yours.

## Commendation of Senator Fulbright

EXTENSION OF REMARKS
OF
## HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a transcript of a broadcast recently made by Edward P. Morgan of the American Broadcasting Network. In the broadcast he makes comment on some of the thoughts which have been advanced by the very able chairman of the Committee on Foreign Relations, the Senator from Arkansas [Mr. FULBRIGHT].

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

There was the unmistakable ring of sincerity in the concern and the convictions the President voiced in his broadcast last night about the Berlin crisis. But beyond an attitude of firmness he seemed to offer no real handle, so to speak, for the public to grasp in understanding. Do we simply fasten our seat belts and hold on grimly while the pilot bravely tries to negotiate the craft through storms ahead? Might it not be helpful, even reassuring, to study, together, the maps of the terrain a little more in detail to make sure we are not overlooking an alternate course?

It was the analysis of the situation made on the floor of the Senate earlier yesterday by the new chairman of that body's powerful Foreign Relations Committee, Arkansas' WILLIAM FULBRIGHT, which struck this reporter, at least, as a more meticulous measure by contrast.

Except for a critical question about the administration's philosophy and procedure in selecting ambassadors, this represents the first public statement of substance that FULBRIGHT has made since he succeeded to the chairmanship relinquished by the venerable Senator GREEN. There has been some impatient criticism to the effect that FULBRIGHT should have spoken up before. There is reason to believe, however, that his silence was deliberately calculated to discourage inferences which might have been drawn from premature declarations, either that the Democratic leadership in Congress was hopelessly at odds with the administration's foreign policy or that it endorsed it without qualification.

Considered in this light, Chairman FULBRIGHT'S remarks appear to take on added significance. Having said that there is a unified stand against any separate deals with the Soviet Union, that there is agreement among ourselves that we won't be driven or enticed from Berlin or from West Germany, that we deny the Russians have any legal or moral right to dominate the subject peoples of the satellites, FULBRIGHT then emphasized that he sees no peculiar virtue in the status quo.

This brings us to the possibility of making some change in the posture of the East-West forces facing each other in Central Europe. Obviously a withdrawal, a disengagement, a thinning out on our side would be a hollow quid if the Communists didn't come through with a quo. What assurance have we that they will come through, or follow through and sustain the quo when they have broken so many agreements in the past? The answer is, there is no assurance unless they find it to their interest to do it. This they did find in Austria and after seemingly endless negotiations, Vienna got a peace treaty and a withdrawal of Soviet troops from Austria.

Obviously, as Senator FULBRIGHT emphasizes, any deal with the Russians would have to be policed but, he adds, "we ought not to accept the facile axiom that the Russians have no intention of ever coming to reasonable terms on any matter directly affecting their own interests. And wisely he counsels that we should not in any case expect too much, that it may indeed be years before the Russians come around to an arrangement that really balances a quid pro quo.

This brings up the problem of our preparation and staying power for the long pull. The President insists that he knows best and that he has decided we are getting a strong, balanced defense even though we are deliberately not trying to keep even with the Soviets in the missile race. Senate Majority Leader LYNDON JOHNSON, who is preparing to attack this thesis in a major speech shortly, is impressed with the rebuttal that "this is one race in which second place could become last place."

But there is another aspect to our armament, a human aspect. The President commanded a half hour of prime radio and television time last night to state his case and he concluded with the assurance that "together with our allies we stand firm wherever the probing finger of an aggressor may point.". The probing finger of an aggressor points in almost every direction and it is by no means always armed with a gun, but it is pointing a ruthless competitive challenge to our whole system. Can we meet it, with or without sacrifice, with or without a reorientation of our sense of values? It would have been helpful, I think, to have some data on these points to ponder as the President's sober face faded from the TV screen and we went back to our accustomed fare of a filmed thriller, the charms of a blonde singer, an acrobatic dance number, and the merits of a particular brand of frozen orange juice.

## Byelorussian Independence Day

EXTENSION OF REMARKS
OF
## HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. RODINO. Mr. Speaker, Byelorussia's modern history is overshadowed by Russian history, because during most of that period the country had become part of Russia, and the Russians have tried to eradicate all Byelorussian traditions and national traits there. But the Byelorussian people, who have had a longer history as a nation than the Russians themselves, were never willing to forego and forget their distinct identity, and they have always wanted to regain their freedom and independence. They had that opportunity in 1918.

In that year, when the detested Czarist regime was no more, and the new Communist regime in Russia was still in its infancy, the Byelorussians regained their freedom and proclaimed the establishmentof the Byelorussian National Republic on March 25, 41 years ago. Then it was hoped that some 10 million Byelorussians, having become sovereign in their historic homeland, would enjoy the fruits of freedom in peace. Unfortunately that was not to be. Early in 1921, before Byelorussians had the chance to consolidate and strengthen their government, Soviet forces attacked and overran the country, and Byelorussia as an independent nation vanished. Since then, for more than four decades these liberty-loving and sturdy Byelorussians are living under the unrelenting rule of Communist Russians. But they have not given up their hope for freedom and independence. They still cherish that noble ideal, and on this 41st anniversary of their independence day, I wish them strength and fortitude in their moral and physical struggle.

## A Permanent United Nations Police Force

EXTENSION OF REMARKS
OF
## HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. JAVITS. Mr. President, on August 8, 1957, the Senate adopted Senate Resolution 15 expressing the sense of this this body in favor of the creation of a permanent United Nations police force. Such a permanent U.N. police force has long been the dream of those who seek to firmly maintain the peace.

At the ninth annual conference of national organizations called by the American Associations for the United Nations, on March 10, my distinguished colleague [Mr. KEATING] delivered a significant address on the need for a permanent U.N. police force.

I ask unanimous consent that my colleague's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A PERMANENT U.N. POLICE FORCE

The United Nations, now in its 13th year of existence, continues to be the most effective organization yet devised by man for the maintenance of peace.

The founders of the United Nations hoped that the harsh lesson of World War II would long discourage threats to the tranquility of the world. Sorrowfully, it must be recognized that these hopes were in vain. For while the United Nations has served us well,

it has not yet succeeded in completely stamping out the lurking dangers and outbreaks of hostilities.

This organization for peace has accomplished much good, but it must be made to function even better.

One essential step in the process of making the United Nations stronger is the creation of a United Nations police force.

I need hardly remind this audience that the idea of an international police force is not new. It was incorporated into the covenant of the League of Nations. The United Nations charter specifically provides for U.N. armed forces operating under the Security Council and a military staff. Unfortunately, little has been done to implement these provisions.

The principal obstacle to constructive action on this subject, as on so many others, has been the intransigence of the Soviet Union. Last October its delegate to the United Nations announced that any move by the General Assembly to establish a peace force would be illegal and unacceptable. This attitude emphasizes the fundamental division within the United Nations between those nations which desire a stable international order and those which are determined to undermine the peace of the world community by their aggressive actions.

The United States has repeatedly demonstrated its willingness to participate in an international army for peace. The President in addressing the General Assembly last August urged action by the Assembly looking toward the creation of a standby United Nations peace force. And Secretary Dulles has since suggested positive steps for carrying out this plan.

Under the Secretary's proposal, a small planning staff would be created within the Secretariat to develop standby plans for calling into being, deploying and supporting such a peace force. This planning staff would develop concrete arrangements to facilitate any United Nations decisions to employ its force. These arrangements would be designed to enable the United Nations effectively to meet any crisis with a minimum of delay.

The Congress of the United States also is on record as approving in principle the creation of a peace force. In the last session, a concurrent resolution was adopted expressing the sense of the Congress that consideration should immediately be given by the United Nations to the development, within its permanent structure, of such organizations and procedures as would enable it promptly to employ suitable U.N. forces for such purposes as observation and patrol in situations that threatened international peace and security. I strongly endorsed this resolution as a demonstration of this Nation's willingness to explore all means for preserving world peace, and I am happy to note that it won overwhelming support in both Houses.

The operations and experience of the United Nations emergency force in the Gaza strip demonstrates the purpose a peace force can serve. It also demonstrates the many problems involved in any such undertaking. The Secretary General's excellent report to the General Assembly on the operations of UNEF gives us a significant case history of the use of such a force from which many guiding principles can be derived.

I find myself in disagreement, however, with the conclusion of the Secretary General that the nature of the actual organization required should not be anticipated in advance. In my opinion, the effectiveness of such a force would be enhanced by its establishment on an ever-ready, permanent basis. This is the only way to guarantee its immediate availability in the event of a crisis.

The force must be operated at all times under the strict and direct control of the United Nations. But we cannot afford the delay which would result from bringing it into being only after the outbreak of hostilities and the resolution of all political decisions.

The recent situation in the Near East demmonstrated the tremendous need for a permanent peace force ready to move into action instantly at the request of a member government threatened by outside aggression.

In a world contracted by speedy communications, in a world in which even the smallest nations possess the terribly destructive weapons of modern war, any international disturbance—however localized—can spread like a plague and present an immediate threat to world stability. The only feasible answer to this challenge to the peace of the world is to provide a U.N. force capable of so spreading a U.N. mantle over an embattled state as to inhibit—if not directly to prevent—a coup d'etat, infiltration by indirect aggression, or other untoward pressures from outside the nation, such as we witnessed in the Near East.

A United Nations police force need not be a huge, all-powerful army. It might not number more than 50,000 or 60,000. It might perhaps be found best to establish a firm nucleus at all times centered under one command, with other forces in the individual countries, available upon call.

It is my firm conviction that the smaller nations of the world must form the backbone of any international force. This will prevent the bigger powers running the risk of being dragged into a nuclear conflict which could doom all mankind.

Such an international policy army could not—and should not—fight wars. But a permanent U.N. police force can serve as an effective deterrent to hostilities, could be a focus for the moral opinion of the world, and could serve numerous practical uses in observation, patrol, and guard duty between potentially hostile states. As the Secretary of State pointed out in his address to the General Assembly, "its very presence (would) make visible the interest of the world community in the maintenance of tranquillity."

The possibility of establishing an international police force is a particularly pertinent and timely topic for the troubled times in which we live. Perhaps never before in the history of the world has there been greater need for calm, objective, and broad-minded thought on this possible avenue for helping to achieve a more just and secure international order. We must search with imagination and foresight for the answers to the enigmas of world peace. Today we show too little of either quality—at a time when we stand in desperate need of both.

The time is running short. Each new crisis brings us closer to the potential horrors of a World War III. The next international brush fire may set off that worldwide conflagration if the nations of the world do not rise to the occasion.

A permanent United Nations police force provides a new, decisive means by which the nations of the world which sincerely believe in peace can provide the machinery to quarantine regional conflicts and thus better insure their solution. I urge this great organization, which is dedicated to the strengthening of the United Nations, to work for this goal. It is one of the strong, sure ways of making the United Nations the instrument for peace which all men of good will hope and pray it will become.

## Housing Problems of Mobile, Ala.

EXTENSION OF REMARKS
OF
### HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. SPARKMAN. Mr. President, cities throughout the country are being confronted with the difficulty of planning and obtaining adequate housing with which to meet the requirements of the law to provide decent, safe and sanitary housing for persons displaced by reason of urban renewal projects, Federal highway projects and other Government action.

In the Mobile Register a few days ago a reporter and columnist for that paper, John Will, gave a very fine discussion of this problem as it relates to the city of Mobile. I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOHN WILL INTERPRETS THE NEWS—PLANNED FEDERAL HIGHWAY PROJECTS MAY AGGRAVATE HOUSING NEEDS HERE

The question of housing in Mobile has been brought to the front by the recent announcement that the Public Housing Administration has "reserved" an additional 2,180 units of low-rent housing for this city.

Now it should be clearly understood at the outset that this does not guarantee the actual construction of one unit. It signifies only that if the funds become available and the PHA is satisfied as to the need, Mobile can get up to a maximum of 2,180 more units of public housing. The 2,180 figure came from the Mobile Housing Board which applied for "reservation" of that volume of housing.

The next move will be for the PHA to make a loan to the housing board to finance studies and plans for the purpose of determining where the projects should be located and how they should be laid out. Then, after one or more projects have been settled upon, the next thing will be to get the construction money from the Government.

And the amount of money available for construction will depend upon the appropriation made by Congress. Furthermore, this appropriation must be spread over the whole country. So it may be that there will be funds for the actual building of only a few hundred units. And it is conceivable that there may be no funds, although that it is highly unlikely because Congress is almost sure to pass some sort of a public housing bill.

There are many schools of thought on the matter of Government intervention in the housing field. Many people think that the Government's activity should be restricted to the so-called FHA and GI loans to enable families to build their own homes. Then at the other extreme, there are those who favor a broad program of low-rent public housing.

The practical aspects of the problem should be always kept in view. If large numbers of families are to be displaced by the new Federal highway projects, for example, some provision should be made for their re-

location. This is particularly important if they are in the low-income category. Since they are to be displaced as a result of a Government program related to the national defense, they are entitled to assurance that they can find new places to live at a cost within their means.

It will be argued that provision of the necessary new housing should be left to private enterprise. The question is: Can or will private enterprise undertake the task? The point is that when the Government starts tearing down houses to make way for the new highways, the displaced residents will need some place to move to. It certainly would be unreasonable and unfair to leave them to the mercy of makeshift arrangements.

However, the chief objective of Government housing activity should be to encourage home ownership and not to multiply public housing. Accordingly, the volume of new public housing in this city should be held to the minimum necessary for the families who must be relocated. And the locations should be selected with the greatest care.

Furthermore, it has been brought out that there is some pressure for a "scatteration" policy in public housing. In other words, the Government would acquire building lots here and there throughout the community and put up publicly owned duplexes or perhaps four-family apartments, rather than large projects. Such an arrangement could not be tolerated. It would depress property values and would have the effect of an arbitrary intrusion on the accepted pattern of community life. We don't think that the members of the Mobile Housing Board will ever go along with any "scatteration" idea. We believe they have too much sense for that.

Finally, we hope that some time soon, it will be possible for our city officials to inform the public as to just how much dislocation will be caused by the new Federal highway program. This is the key to the whole situation. The people have a right to know what to expect and when to expect it. Not only will housing be involved but many other readjustments will be required.

Change is the order of the day and we cannot escape its impact. But in all the planning, two objectives should be kept in view: First, that no family will be subjected to any unnecessary hardship; second, that no innovations will be undertaken which will endanger the friendly relations now existing in the community.

## Address by Senator Keating on the Supreme Court of the United States

EXTENSION OF REMARKS
OF
### HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Buffalo (N.Y.) Evening News on March 19, 1959.

The editorial comments upon the very cogent address made by the able junior Senator from New York on the floor of the Senate last week, pointing out the clear duty of Congress to protect its constitutional lawmaking jurisdiction against judicial encroachment.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KEATING ON THE COURT

We couldn't agree more with Senator KENNETH KEATING's first major speech on the Senate floor this week. Its subject was the Supreme Court, and it was a masterpiece of balance, commonsense and vigor. It drew a firm line that is much needed these days between respect—even reverence—for the independence of the judiciary as an institution, and the clear duty of Congress to protect its own constitutional lawmaking jurisdiction against judicial encroachment or against judicial misreading of its intent.

Senator KEATING obviously spoke from his heart, and also from the fullness of his 12 years of conscientious experience on the House Judiciary Committee, in his appeal to the Senate to shun extremism during the great debate that is currently raging over the role of the Supreme Court.

The Supreme Court has had no sterner critic for some of its recent decisions than Senator KEATING. In the House, and now again in the Senate, he has sponsored many bills to restate a congressional intent he feels the court has grossly misread. In two areas particularly—cases involving subversion and law enforcement—he declared that the result of a recent pattern of Supreme Court decisions has been to "make a mockery of our national effort to keep this country secure against Communist treachery," and to impose "entirely unwarranted obstacles to anticrime measures."

One of the worst shortcomings of the last Congress, in Senator KEATING's book, was its failure to modify or correct the impact of these decisions. But in pressing hard for specific corrective legislation, he said, "I will never do this in a way which challenges either the motives or the power of the High Court, and I will firmly oppose any indiscriminate legislation which would curtail the Court's jurisdicition and methods of operations."

Our new Senator, in short, has ably defined the duty of Congress in its relation with the judicial branch of the Government as being a double-barreled one: To prevent undermining of our judicial system and protect and preserve the rule of law, on the one hand; and to protect its own lawmaking jurisdiction against judicial encroachment, on the other. What he seeks is what the News has urged repeatedly: A balanced and moderate approach which, showing a profound respect for the place of the Supreme Court in our system of government, will nevertheless halt the trend toward judicial legislation without undermining the independence of the judiciary.

## Voteless Washington

EXTENSION OF REMARKS
OF
### HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. BIBLE. Mr. President, the unfortunate plight of voteless Washington is recognized far beyond the shores of the Potomac. The Reno Evening Gazette, published in my home city, added its voice to the editorial chorus that is being raised all over the country in behalf of the disenfranchised National Capital. I ask unanimous consent that the editorial, written by John Sanford, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

A SORRY EXAMPLE

Washington, D.C., may be the National Capital, but it is hardly a model community in some respects. It has fewer teachers and more policemen in relation to the population than any of the States.

For every 10,000 inhabitants, the District of Columbia has 75 employees in the field of education. This compares with 95 per 10,000 in Rhode Island, the lowest ranking State, and 203 in Wyoming, the highest State. The Federal district has 36 police workers for every 10,000 inhabitants. New York has more than any other State—26. The lowest is West Virginia with 9 per 10,000.

But the Washington residents can't be blamed for this. They have no voice in their own government. Congress is their boss, and while Congress may fret about the said state of education over the Nation, or the crime situation in other metropolitan areas, it isn't at all worried about its own headquarters. And what if the Washington residents are angry? They can't vote. And what politician is going to listen to a citizen without a vote?

## Tribute to New York State Senator Benjamin F. Feinberg

EXTENSION OF REMARKS
OF
### HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. JAVITS. Mr. President, on February 7, 1959, a distinguished member of the New York State Senate, Hon. Benjamin F. Feinberg, passed away. Senator Feinberg's life was devoted to the public service; in addition to having been majority leader in the New York State Senate he was an outstanding chairman of the Public Service Commission of the State of New York and president of the National Association of Railroad and Utilities Commissioners; he was in the forefront in advancing the cause of education in New York; he was a devoted family man and humanitarian. Joel Lodge 118 of B'nai B'rith had, before Senator Feinberg's passing, voted him to be Citizen of the Year and to receive an award to that effect. The award will now be presented posthumously.

I ask unanimous consent that the text of the lodge committee's report and the resolution of award to the late Senator Feinberg, a very distinguished American and my good friend, be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

The committee of Joel Lodge, B'nai B'rith, appointed to select a person as the 1958

Citizen of the Year respectively submits the following report:

As a result of several meetings held in January 1959, the committee chose as the person to be honored, Senator Benjamin F. Feinberg. In view of the Senator's confinement to his home and the hospital, preparations were made for the conferring of the award in Montreal or at his home, if his attendance at a formal dinner during Brotherhood Week could not be arranged.

The late Senator Feinberg's name has long been favorably considered by the committee for the award of Citizen of the Year, but previous committees had deferred plans in anticipation of the year of his retirement. The prior committees had felt that such time would be most fitting as the culmination of his career of outstanding public service.

The committee feels that the year 1958–59 should be designated as a year of memorial to Senator Feinberg and the award made posthumously by means of a resolution duly adopted by the lodge convening as a whole.

The text of the resolution as adopted by the lodge at its February 17 meeting follows:

"RESOLUTION

"Whereas the late Senator Benjamin F. Feinberg has throughout his lifetime displayed the attributes of selfless devotion to this community and the public which he served so long and so well; and

"Whereas such devotion is exemplified by his many accomplishments—

"(a) in the field of education, by his fostering and advancing the State University Teachers College; in establishing Champlain College, forerunner of a low tuition State-supported college system; and his promotion of legislation to improve the salaries and working conditions of schoolteachers and encourage qualified persons to enter this profession;

"(b) in the realm of government, by his inspirational leadership while serving as State senator, senate majority leader, and confidant of Governors;

"(c) in the field of public utilities by his outstanding record as chairman of the Public Service Commission of the State of New York and president of the National Association of Railroad and Utilities Commissioners;

"(d) in his service of God, as life trustee of the Beth Israel Congregation of Plattsburgh and president and lifelong member of this lodge of B'nai B'rith; and

"Whereas he has displayed heartfelt conviction in the principle of the brotherhood of man as demonstrated by his active participation in social and fraternal organizations devoted to charitable purposes such as the Benevolent and Protective Order of Elks, where he served as exalted ruler; and Free and Accepted Order of Masons where he rose to the office of worshipful master of his lodge; Rotary where he was chosen for the presidency of the Plattsburgh club; and, in furtherance of such conviction and his belief and dedication to this principle of brotherhood, he has been a lifetime true friend of all men and all mankind; and

"Whereas Senator Feinberg's ascendancy through life from his humble origin as the son of immigrant parents, through his formative years as a diligent student, devoted teacher and school principal, distinguished attorney and counselor, held in high esteem by his fellow members of the bar, and an outstanding member of the New York State and American Bar Associations, a fair and just judge and legislator, has exemplified the American tradition of freedom of opportunity for all regardless of race or creed; and

"Whereas his unshakeable faith in democracy and his unflagging determination to preserve and strengthen it was exhibited by the legislation which he sponsored and authored in the State legislature: Now, therefore, in recognition of this record and example of Americanism and brotherhood, be it

*"Resolved*, That the Award of Citizen of the Year for the year 1958–59 be conferred posthumously upon Benjamin F. Feinberg; and be it further

*"Resolved*, That the year 1958–59 be set aside in the annals of the Citizen of the Year Awards as a year of memorial in his honor, and that a record of these proceedings be suitably inscribed and presented to the members of his immediate family."

The foregoing resolution, upon motion duly made and seconded, was unanimously adopted by the Joel Lodge No. 118, B'nai B'rith, of Plattsburgh, N.Y., convened as a whole at its regular meeting held February 17, 1959.

In witness whereof, we, the undersigned, all being the officers, and members of the committee for selection of the Citizen of the Year Award for 1958, have hereunto set our hands and seals this 17th day of February 1959.

IRVING GOLDMAN,
*President.*
SOL LEVITES,
*First Vice President.*
MARK RABIN,
*Second Vice President.*
ROBERT HEWETT,
*Recording Secretary.*
HERBERT LEWIS,
*Corresponding Secretary.*
LOUIS KAIFETZ,
*Treasurer.*
DAVID SMITH,
*Chaplain.*
JAY GORDON,
*Committee Member.*

## Address by Samuel Rubin at Testimonial Dinner to Leonard Bernstein

EXTENSION OF REMARKS
OF
## HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. JAVITS. Mr. President, the American-Israel Cultural Foundation is an organization having as its object the promotion of intercultural exchanges between the United States and Israel. The foundation on February 2 tendered a testimonial dinner to the outstanding young American conductor and composer, Leonard Bernstein.

I ask unanimous consent that the address by Samuel Rubin, president of the foundation, on the occasion of that dinner, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SAMUEL RUBIN, PRESIDENT, AMERICAN-ISRAEL CULTURAL FOUNDATION, AT TESTIMONIAL DINNER TO LEONARD BERNSTEIN, FEBRUARY 2, 1959

A September day in the Negev can be hot and humid. We had just left Nehora, a small settlement within sight of the Jordan border where still another in a chain of cultural centers was dedicated by our foundation. The entire village turned out. Farmers, recent immigrants from Iraq and Morocco, came streaming in from the fields; their wives and children in festive clothing occupied rows of newly built benches facing the speaker's table. The men, bearded and bronzed from work under the sun, remained standing, quiet and respectful, as speaker after speaker explained the reasons for the newly constructed cultural center. Their children were going to learn to play and paint—their parents to read and write. From Tel Aviv and Haifa, visiting troupes of actors and dance groups would soon be performing on the simple yet well-designed stage. A new richer life was to unfold for this typical hard-working settlement, struggling by day with the soil, by night standing guard with watchful eyes in the direction of the Jordan border.

This was the scene we left behind that day in September, as our car headed back to Tel Aviv where we waited for a cable from tonight's guest of honor to tell us he would be on hand for this dinner, and now we assemble to pay tribute to a man whose music has moved millions closer to a harmonious world. Yes, music can play that role—so can the theater and the dance. Haven't the Van Cliburns and the Isaac Sterns proved it as American cultural ambassadors to the Soviet Union—and the Moiseyev dancers, as ambassadors to the United States? Isn't it also true of Zino Francescatti, Richard Tucker, and many other of our good-will ambassadors to Israel? And how well we remember the last visits of the Israel Philharmonic and the Inbal Dance Group, presented to America by our friend and board member, Sol Hurok.

This is the very meaning of cultural exchange—a means toward the establishment of peace, an objective that man must not lose sight of for one single moment. Cultural exchange is perhaps an awkward term. What it means is man's joining in the universal tongue of science, art, and letters. History records that Jews were pioneers of cultural exchange in Western civilization. The emergence of Christianity and Islam from Judaism was a form of cultural exchange. Long before the printing press, telegraph, and radio, the wandering Jew, moving across the world from land to land, from civilization to civilization, carried one country's culture into another.

Through Arab sources they carried Greek culture into a Europe emerging from the Dark Ages; the Renaissance is deeply indebted to Jew and Arab. There is, therefore, special significance in the reemergence of Israel in the Arab world, which may yet bring another great renaissance to mankind.

In our audience tonight there is a young Israeli majoring in Economics at Brandeis University. He is an Arab. Subhi Abu-Gosh, we welcome you. Another Israeli Arab is studying Irrigation Engineering at the University of Utah. Their studies over, these two young men will return to Israel, equipped with American techniques, and when the barriers of misunderstanding between Israel and her Arab neighbors finally crumble, what better ambassadors that Mr. Abu-Gosh and Mr. El-Razaq?

Tonight we had the unusual honor of listening to an endorsement of our intercultural efforts by the President of the United States and the Prime Minister of Israel. While most heartening, we nonetheless choose to regard their endorsement in the broadest possible sense. What Mr. Eisenhower and Mr. Ben-Gurion reemphasized was the desperate need for better understanding if our civilization is to survive.

Let us see how this works.

For example: Soon after Inbal's return from its recent extraordinary successes in our country and Europe, Japanese authorities extended an official invitation for Inbal to appear as a featured Asian group in five Japanese cities during the Asian People's Festival. Imagine the significance of such recognition. And to think that only a few years ago most of these young dancers, as

new immigrants from Yemen, were housed in tin shacks known in Israel as Maabaroth, until their talents and the riches of their oriental culture were discovered by our representatives. With limited funds and with help from Jerome Robbins and Anna Sokolow, whom we sent over, Inbal is now recognized as one of the world's finest ethnic dance groups. Can there be better traveling ambassadors of good will?

Or the Israel Philharmonic Orchestra you heard this evening—with funds from you, with conductors like Leonard Bernstein, Charles Munch, Dimitri Mitropoulos and others—this symphony, after touring our country and the Continent is now acclaimed one of the great orchestras of all time.

I wish there were time to mention our work with Israel's museums, theatres, academies of music and art; our work in Arab villages, where this very day a study is being conducted by a team of sociologists, engaged by us, to make certain that no gap remains between the cultural life of the Israeli Arab and Israeli Jew. At a recent reception at the Hebrew University and the Weizmann Institute, I experienced the excitement of meeting students from Afro-Asian countries—Japan, Ethiopia, Thailand, Burma, Ghana, India. They were doing graduate work in their specialized fields, under auspices of our Middle-East Fellowship Fund. Picture their return, as graduate physicists, physicians, and pharmacists, to their home villages with Israeli diplomas under their arms. Isn't this the best expression of diplomacy?

A few days ago the New York Times carried a detailed story of an Afro-Asian seminar on cooperatives, taking place in Israel, with representatives from 17 countries in attendance—among them, top-ranking officials, ministers of agriculture, and heads of organizations. For the next 6 months they will be examining in detail the Israeli system of cooperatives in agriculture, industry and transportation. In India and Ceylon, their findings will be applied to the resettlement of millions of landless peasants. In Thailand and Burma, border settlements will be built, fashioned after the Israeli pattern. This seminar, substantially subsidized by our Middle-East Fellowship Fund, will return 60 good-will ambassadors to 17 Afro-Asian neighbors of Israel.

It is almost impossible to believe that in the 10 short years of Israel's existence, despite hardships and hostilities, this small but dynamic republic has joined the world's great powers in sharing her technical, scientific and cultural skills with many countries, especially the newly emerging nations in Africa and Asia. With these Afro-Asian countries, a two-way trade has developed—a two-way trade in commodities as well as cultural values. Thus, Israel is now beginning to repay, with interest, the invaluable aid it has been receiving from the United States and the United Nations. Suddenly confronted, however, with a mass exodus of 250,000 Jews from Rumania, with many more thousands expected from other countries, Israel must continue to look to us for help. This is an emergency of vast proportions. I wonder if the world can stand by idly and consider this exclusively a Jewish problem.

Nor can it continue to stand by idly and permit poverty, disease, and ignorance to plague the lives of many millions in the Middle East. From this platform 3 years ago we were first to propose the establishment by the United Nations of a Middle East Economic and Cultural Authority, to raise living standards and bring peace and economic security to the whole area, and at what little cost compared to the billions poured into the modern military budgets. That the world may not yet be prepared to abandon completely production of defense weapons we reluctantly admit, but we cannot deny that behind the harsh words hurled across continents there appears a growing consciousness that the use of force and violence to settle disputes between nations will not secure for the innocent people of the world the permanent peace, prosperity, and culture to which they are entitled.

Cultural exchange—yes, cultural competition—between nations can and must be the 20th century vehicle toward peace and understanding. These, my friends, are some of the larger objectives toward which we must continue to strive. True, we are small and few. We can do little more than set the stage—and fervently hope that our efforts will inspire the men who move the mountains. Toward this work, you in the audience have given your generous support—and it is for this support that we on the dais rise to salute and applaud you—every one of you.

---

## Citizenship: A Process of Gradual Evolvement

EXTENSION OF REMARKS
OF
### HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. SPARKMAN. Mr. President, recently a young lady from Limestone County, Ala., Miss Faye Chapman, a senior at Clements High School, participated in the oratorical contest for girls of the Civitan Club. Miss Chapman won the girls' division and was awarded a scholarship to Birmingham-Southern College.

I have a copy of the speech Miss Chapman gave at that time, which is a very fine and thoughtful speech. I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

CITIZENSHIP: A PROCESS OF GRADUAL EVOLVEMENT

(By Faye Chapman, Clements High senior)

I was born an American; I will live an American; I will die an American; and I intend to perform the duties incumbent upon me in that character to the end of my career. I will do this with absolute disregard to personal consequences.

What are personal consequences? What is the individual man, with all the good or evil that may betide him, in comparison with the good or evil which may befall a great country in a crisis?

Daniel Webster stated the duties of an American citizen many, many years ago much more forcefully than our history books state them today.

Let us examine the term "citizenship" in view of America today.

Citizenship is the status of a person who owes allegiance to the government of his country in return for political rights and privileges. Our ancestors, the citizens of America in bygone years, had many duties and responsibilities to fulfill in order to establish this democracy—the same democracy which in later years was to guarantee civil rights and full protection to millions of citizens.

Habberton has said, "The ideal citizen is the man who believes that all men are brothers, and that the nation is merely an extension of his family."

Were our forefathers ideal citizens? Are the majority of Americans today ideal citizens? Certainly not, but it is conclusive that much progress has been made.

The ideal citizen today would be characterized by a quiet independence; a genuine love of righteousness and integrity; a life of uprightness and truth; of honesty and fair dealing; and an absence of cringing and paltering; and of that miserable and contemptible fawning upon the rich; and that silly and despicable worship of those in place and power. All these things and others must receive much care and attention before the ideal stage of citizenship can be acquired.

The ideal citizen will be a patriot; a patriot who places his country's interest before his own; a patriot who fills well his station in life whether public or private, who loves peace and promotes order, who labors to uphold the good and put down the bad; a patriot who seeks to aid in all movements that look to the instruction, elevation, and permanent betterment of his fellow citizens, and to put down all such movements or institutions as tend to degrade or demoralize them. This is the patriotism for which we plead.

In order to keep America first, each citizen should understand the value of the service of the groups to which he belongs, and he should be willing to work earnestly and loyally for their success. Because one finds himself merely a little part of a great organization with others, he sometimes loses a sense of responsibility for doing even his little part. But this plan of group living which we have accepted demands that everyone may do his bit.

There is no cog in any complex machine that does not have important work to do. It is the duty of every citizen to find out exactly what his part in the machinery of American life is, and then to find out how best he can do his part. This duty should be fulfilled equally well in home, school, industry, church, government, and recreation. As J. S. White has said, "A second-rate man can never make a first-rate citizen." A true citizen will be first rate in his beliefs, ideals, and efforts.

Today, America ranks tops as the most respected and admired, yet feared Nation on the globe. Its manufacturers are the world's leading; its producers, the world's foremost; and its leaders, the world's wisest and most concerned with the Nation's well-being and peaceful continuance. How was all this acquired? By the gradual evolvement of citizenship from the time of our forefathers' landing at Plymouth to today's life of advanced knowledge and complex society.

Let us explore the beginning of this great word "citizenship" and outline its process of gradual evolvement through the ages.

In ancient Rome, good citizenship excelled all other requirements. Training for citizenship was begun in the home with the family, and was continued in the army. Although the great city-nations of Rome were different, they all accepted the code of the ideal of citizenship—having citizens responsible for their government and a government responsible to the citizens. Americans, like the ancient Romans, believe that citizens have the duty of running their Government and the right of having the Government run in their interest.

When our forefathers first came to America in 1607, they came to establish freedom and to live as they wanted, to worship and to govern freely; and to set up a nation conceived in liberty and dedicated to the proposition that all men are created equal. Did they succeed? Yes, the venture was successful although an extensive time element was involved. The signing of the Declaration of Independence actually opened the gate

to the beginning of American citizenship and independence for all.

The Civil War was fought so that all people of our great and prospering Nation could become its legal citizens. That purpose was accomplished.

Citizenship and its true meaning have survived the conflicts, wars, and trials of the decades. Yet, it has developed with the improvements and inventions of the times. It has continued as the foremost thought of all Americans. There is a deep, unspoken love and appreciation for American citizenship that we, the participants of a self-governing nation, feel and will continue to feel for all eternity.

A great nation is made only by worthy citizens. We, by believing in and holding fast to the ideals of citizenship, will be worthy citizens, and we will make this Nation even greater than it is today. When we see the waving of Old Glory in the crisp, free smelling air of America, we feel the desire to be worthy of this great Nation which the famous, respected, and beloved red, white, and blue represents.

We dare not, as American citizens, forget the ideals for which America stands. We dare not neglect to face squarely to duties and problems which confront us, the holders of citizenship in this advanced, free, and democratic Nation.

## The Crisis in Germany

EXTENSION OF REMARKS
OF
### HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Positive Implementation," from the Memphis Commercial Appeal of March 20, 1959. The editorial discusses the situation in Berlin.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSITIVE IMPLEMENTATION

Positive implementation to the facts of the U.S. position in Berlin as defined recently by President Eisenhower was provided almost simultaneously by Senator J. W. FULBRIGHT, Democrat, of Arkansas, in the upper House of the Congress.

The more his statements are read and studied, the more readily are their major importance recognized. His delineation was bipartisan in finest sense. It was objectively realistic without denying all hope that negotiation could bring the fruits of amicable settlement.

In content, brevity, and scholarly presentation it revealed Senator FULBRIGHT's stature as a desirable chairman of the Senate Foreign Relations Committee—that group which wields such tremendous power over this country's international relations. It will cause millions of war-anxious peoples to take another look at the man.

Senator FULBRIGHT prefaced the heart of his address by noting that "the doubts and fears of our people are probably growing almost in proportion" to Khrushchev's "capricious and thoroughly unpredictable statements" as the Soviet leader "maneuvers the Berlin situation on a giddy course toward the conference table."

This, it develops, has reached a point of giddiness where there is a new statement a day and with Khrushchev now touting a peace conference for all World War II beligerents. He could profit more by heeding what Senator FULBRIGHT said for the purpose of reassuring "our friends" and making it "clear to the leaders of the Soviet Union, and thereby avoid miscalculations on their part, that, despite the free debate characteristic of a democracy the American people, regardless of party, stand united" on certain propositions. He spelled these out as follows:

The United States will not agree to any European settlement that accepts, even tacitly, Soviet subjugation of the Eastern European countries.

The United States will make no unilaterial deals with the Soviet Union.

The United States, in concert with its European allies, intends to remain in Berlin and West Germany unless there is a mutually agreed settlement "on issues larger than Berlin" in a form that all Western states believe to be in their interest.

The United States "will not be driven or enticed from Berlin or West Berlin."

Senator FULBRIGHT also emphasized this vital point:

"The United States cannot in honor accept, even tacitly, any proposition, designed to formalize the subjugation of the once-free satellite peoples.

"Our society owes much of its character to the 18th century philosophers who gave meaning and depth to the term 'freedom.' We could no more accept the permanent subjugation of freedom in the satellites than we would consent to any compromise of freedom in Berlin or West Germany."

All that Khrushchev wants to negotiate about is something the United States and its allies could give up—if they would. Senator FULBRIGHT has brought the subjugated satellites into focus.

There's a point for real negotiation—for some hard demanding on our part. Let the Red conspiracy establish the virtue it does not possess by freeing the now enslaved peoples of Poland, Hungary, Czechoslovakia, Latvia, Estonia, Lithuania, Rumania and Bulgaria.

Khrushchev will not include those names on any summit agenda.

While pointing out that the West must not be "unreceptive to fresh, soundly reasoned ideas" and that there are negotiable points, Senator FULBRIGHT warned that "it is essential * * * not to expect too much in the way of results * * * to expect any substantial easement in the near future would be the height of wishful thinking.

"Our duty is to strengthen our defenses and our resolve * * * we must not be discouraged."

Senator FULBRIGHT has compounded fact, faith and courage to provide the administration with a foreign policy support design by which Government and people can move forward in unison and in finest American tradition to whatever destiny holds for them in the Berlin crisis.

## The Handling of Discontinuance and Rate Cases by the Interstate Commerce Commission

EXTENSION OF REMARKS
OF
### HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent that two recent editorials published in the Philadelphia Inquirer and the Trentonian be printed in the Appendix of the RECORD. The editorials deal with the efforts of several of us in the Senate to assure fair and reasonable procedures in the handling of discontinuance and rate cases by the Interstate Commerce Commission. The maintenance of mass transportation facilities, particularly in the northeastern part of our Nation, is approaching crisis proportions. Congress must take some remedial action to assure that the public has every right to be heard and their views fully considered in the difficult months ahead. I hope that hearings will be held on our proposals quickly.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Inquirer, Mar. 19, 1959]

AS COMMUTER PROBLEMS GROW

Senator CLIFFORD P. CASE, of New Jersey, Senator CLARK, of Pennsylvania, and others are sponsoring a resolution in the Senate to block further curtailment or abandonment of railroad commuter service.

They want the Interstate Commerce Commission to hold off on 27 railroad applications pending before it to cut down or halt entirely service affecting thousands of daily riders. The object would be to give Congress time to consider amendments to the Transportation Act of 1958. The amendments would materially curb the power of the ICC to permit abandonment or lessening of rail passenger facilities.

Senator CASE cited the application of the Lehigh Valley Railroad to abandon all its passenger service in New York, New Jersey, and Pennsylvania. The Delaware, Lackawanna & Western plans a similar move. Between them these lines carry about 30,000 people daily.

Railroad problems are great and growing. They deserve serious consideration by Congress. And so do the rights and needs of commuters. The resolution urges the ICC to scrutinize the railroad petitions closely and particularly to hold public hearings to give the public its day in court.

Certainly that procedure, which has not been uniformly followed, is very much in order. And, assuredly also, Congress should look closely into needs for remedial legislation, for commuters and for the railroads also.

[From the Trenton, (N.J.) Trentonian, Mar. 10, 1959]

LIGHT FOR DARK CORNERS

The Federal agencies that touch on many facets of the average American's life as they go along their merry way regulating this and that, exist in a hazy half-world of their own, so far as the public is concerned. It's not that the purposes for which they are established are unclear, it's just that the spotlight of publicity seldom touches them until there is a big noise about some of their activities.

At the moment, thanks to New Jersey's Senator CLIFFORD P. CASE and other Members of the State's congressional delegation, the Interstate Commerce Commission's handling of railroad commuter cases occupies the public's attention. CASE has asked for an investigation by some Senate body, but it doesn't seem likely that such a probe will come about.

But it does seem likely that the voters are going to get a closer look at how Federal agencies operate. Senator CARROLL, of Colorado, chairman of the newly created Senate Judiciary Subcommittee on Administrative Practice and Procedure, is moving toward a careful study of the ratemaking and rule-making procedures of such bodies as those

that regulate commerce, communications, trade, power, aviation, and a host of other things

President Franklin D. Roosevelt aptly described Federal agencies as "a fourth department of government." Like everything else in the Federal setup, they have been growing and growing. Congress creates them, but once having done so, the legislators too often forget about them and they are left to their own devices. In some instances, the results have not been in the best interests of the vast majority of our citizens.

If Congress deems it advisable to turn regulatory power over to a commission it creates, then it cannot hold that in so doing it has disposed of its obligation to oversee said commission's operation. CARROLL'S committee has an important task to perform, and in performing it, it would not be surprising if the committee discovered that we don't need all the commissions Congress has set up, with their attendant drain on the Treasury.

## Guides and Standards Established by Federal Trade Commission

EXTENSION OF REMARKS
OF
## HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. MANSFIELD. Mr. President, the Bureau of Consultation in the Federal Trade Commission is busily engaging itself in the protection of the consumers of our Nation. The Bureau is protecting us from false advertising and deceptive sales practices by enforcing its recently established guides and standards.

The March 2, 1959, issue of Advertising Age has an interesting article on the fine work the Federal Trade Commission is doing in this area, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FTC REPORTS ITS STANDARDS, GUIDES GAIN GROUND DESPITE LACK OF FANFARE—DRIVE ADDS ELECTRONICS TO CIGARET, TIRE FIELDS AS CONFIDENCE EXPANDS

WASHINGTON, February 17.—Athough details must be withheld in order to avoid vitiating the program, there has never been a time when personnel of the Federal Trade Commission worked as closely with businessmen in the fight against false advertising as they do today.

Formerly the Commission insisted on litigating the vast majority of its advertising cases, despite warnings that the case-by-case approach was costly and time consuming.

Now the Commission's Bureau of Consultation uses guides and standards to provide leadership for industry groups which are interested in eliminating bad practices on a wholesale basis.

In addition, it is settling hundreds of important advertising cases under new, informal procedures which eliminate fuss, and avoid bad publicity for the honest offender.

For at least a decade, forward looking members of the Commission had argued that the "voluntary" approach should be explored if FTC was to provide real leadership in the fight against misleading advertising.

Some progress was made in this direction under the prodding of former Commissioner Lowell Mason. Now the program enjoys genuine support throughout the top level of the Commission, and with each passing month it wins additional prestige.

Chairman John Gwynne frequently voices his devotion to the voluntary approach, pointing out that "Congress can never appropriate enough money to handle all these matters on a case-by-case basis.

"It is becoming increasingly important," Chairman Gwynne says, "that our efforts along this line be supplemented by securing voluntary compliance with the law wherever possible."

Resistance to the voluntary approach within FTC was based on a belief that businessmen weren't likely to stay reformed unless they were bound with a cease and desist order which could be enforced in the event of a second offense.

But advocates of the voluntary approach point out that advertising offenses often reflect intensely competitive situations. Since individual industry members need assurance that their competitive position will be protected, offenses of this kind often are particularly susceptible to the industrywide approach.

Moreover, the advocates of the voluntary approach say, the public benefits even if some of the voluntary agreements eventually break down.

"We get fast results," they point out. "If some of our cases eventually go wrong, the Commission can still litigate. So, ordinarily, it has nothing to lose by giving the advertiser at least one chance to clean house on a voluntary basis."

Among the first important tests of the new voluntary program was the advertising standards for the cigarette industry, issued in 1955.

Admittedly there have been disappointments—particularly the "tar derby" which broke out in late 1957. But, according to Charles Grandey, Chief of the Bureau of Consultation, the tobacco industry advertising guides have been an outstanding success, considering the evils that existed at the time they were adopted.

On a statistical basis, Mr. Grandey reports, there have been more than 154 instances in which tobacco companies have made major copy changes after conferences with FTC's staff.

"But the important thing," he said, "is that we are in close contact with all 10 cigarette companies. When we find something objectionable, we are able to get into direct contact with people who are in a position to correct the situation. A cooperative spirit has developed, so that these differences get settled."

Last summer, Chairman Gwynne conceded, during testimony before the Blatnik committee, that the cigarette industry's "tar derby" represented a real setback for the industry's advertising standards.

Nevertheless, he point out, every member of the industry responded wholeheartedly when the Commission called a conference to develop standards which could be used in measuring the effectiveness of filters. Moreover, FTC staff members are encouraged by the fact that the number of tobacco companies running in the "tar derby" has been reduced from six to two.

A second of the important industrywide experiments of the Bureau of Consultation involved the automobile tire industry. With strong encouragement from industry trade groups, particularly dealer groups, the Commission drafted labeling and advertising standards to eliminate misleading trade names and terms.

All 36 manufacturers are in the process of revamping their advertising and, where necessary, their molds to abide by the FTC rules.

Some companies, including Firestone, have had to spend hundreds of thousands of dollars on new molds, but there are no known instances now of holdouts determined to litigate.

In the long run, however, the release last fall of guides to eliminate fictitious pricing probably represented the most far-reaching move to establish the importance of the Bureau Consultation as a force in the fight for clean advertising.

With the release of these guides, FTC activated almost spontaneously a huge nationwide cleanup program, which has captured the approval and enthusiasm of civic and advertising interests throughout the country.

Literally tens of thousands of copies of the pricing guides have been distributed by groups such as Advertising Federation of America, National Association of Broadcasters, and American Newspaper Publishers Association. Better business bureaus throughout the country have used them as a focal point for local drives which have fanned out in hundreds of communities. Trade associations have pledged their support. National advertisers and big retail organizations have ordered thousands of copies distributed by their own personnel in an effort to get compliance among their distributors and outlets.

As a result of the pricing guides the bureau of consultation is receiving a flood of mail from businesses of all sizes.

"It is the best piece of Government regulation I have ever seen come out of Washington," one small businessman wrote in longhand.

"Well done," said a radio station which received a copy from NAB. "We want to provide a copy for every one of our advertisers," it told the FTC.

A bedding manufacturer requested 1,000 copies for all of its dealers. The president of a national jewelry association pledged his support, complaining, "There is too much phony advertising. This is a great job and a difficult one."

In a 6-month period, the bureau of consultation closed more than 300 individual advertising cases which might otherwise have led to formal complaints and litigation. When it closes a case, it insists on receiving proof of new ads, with evidence that the controversial portions have been omitted.

And it sticks to its guns. When one concern making a masonry product explained that it could not provide revised proof since it was not planning to use publication advertising in the immediate future, it was told the file would remain open until some evidence of change was submitted. A manufacturer and distributor of paint bowed reluctantly when he was told that his two-for-one sale was not honest pricing. "We think the public is getting a good value," the firm insisted, "but we will go along on your ruling."

A large department store quickly complied when it was told to stop advertising that it was selling a $29.95 electric fryer skillet for $7.95, while another multistate retail organization volunteered that it was already hard at work studying its ads and catalogs, determined to weed out instances of fake comparative prices.

A drug chain cooperated willingly when FTC asked the source of a mispriced TV table. "We are entirely in accord with your position," it wrote, expressing appreciation that the Commission was "going after the trunk instead of the twig."

Individual companies involved in correspondence with the bureau of consultation would read like a "Who's Who" among large retailers, and consumer goods advertisers.

A famous department store apologized for advertising a golf bag at fictitious price.

"The manufacturer ticketed it that way," the store explained. "But we realize it was overpriced, and we have ordered the tag removed from all bags still in stock.

A big department store chain wrote that a directive had gone out from top management ordering all members of the advertising department to familiarize themselves with the guides on false pricing. "Copy is to be reviewed by top management," the letter said, "and there is to be substantially less comparative pricing."

One of the big problem areas has been furniture and bedding. While new trade practice rules for the furniture industry are currently being drafted, the bureau of consultation has received correspondence from individual manufacturers and dealers who are concerned about the fictitious pricing problem. One dealer even submitted his own ad from a newspaper with a request for approval. Meanwhile the three leading bedding manufacturers have already announced to the trade that FTC's pricing guides will be adhered to in the future.

Many of the cases reaching FTC are submitted by businessmen or business organizations which are concerned about breakdowns in business ethics, while other cases are turned up by the Commission's monitors, who watch TV and read the periodical press systematically.

Under new FTC procedures, the bureau of consultation gets first crack at cases involving members of 160 industries covered by FTC trade practice rules.

"If we are convinced that it is an honest error," says John Sullivan, who is Mr. Grandey's top assistant, "we get in touch with them and try to arrange a voluntary settlement."

Chronic offenders, or those who are unwilling to go along on voluntary settlement, are turned back to investigators for reference to the Bureau of Litigation.

Unlike earlier experiments with voluntary settlement which involved formal legal agreements, the new procedure consists solely of an exchange of correspondence and proof of conformity.

"They are entitled to one bite of the apple," Mr. Sullivan says. "If the offense recurs, their credit with us just isn't any good."

Now that the program is achieving such acceptance in the Commission as well as in industry, the Bureau of Consultation is more relaxed about publicity, but the possibilities are still extremely limited.

In his conferences with staff members, FTC Chairman Gwynne points out that the confidential nature of the settlement arrangement is one of its most attractive features so far as businessmen are concerned. "We can't risk any publiicty which would cast doubt on our good intentions," he warns.

Altogether, FTC has a staff of 20 persons working in the various programs of the Bureau of Consultation, ranging from trade practice conference work to correspondence with individual offenders.

In addition to the more than 300 individual cases handled during a 6-month period, the staff gives scores of individual interpretations to advertisers who seek advance approval of ads which venture into potentially troublesome areas.

Staff members are also spending an increasing amount of time attending meetings with groups which want to cooperate.

"If it were possible to describe the rapidly expanding activities of this office," Mr. Grandey said, "it would be evident that the published information about FTC's work in the field of false advertising is like an iceberg—only a small part of the real story is visible."

Lack of publicity also has its drawbacks so far as the morale of the staff is concerned. "Over in the Bureau of Litigation, they have their decisions and cease-and-desist orders to show for their work. We are the silent service. Our story is locked in these files, where no one can see it," Mr. Sullivan points out.

Among the groups fighting for the elimination of bad advertising problems, however, the word obviously has been getting around, for trade groups with individual problems of their own learn the address, and their requests for help end up on the right desk.

Currently, for example, the Bureau of Consultation is considering an industrywide approach in a branch of the electronics industry where fake preticketing has reached epic proportions. In requesting FTC intervention, an industry member reported that the product, worth no more than $10 at retail, is being preticketed as much as $30.

"If a retailer actually got that price," the letter said, "he would be making a 700-percent profit."

Since the 15 major members of this industry agree that pricing practices have gotten cut of hand, the Bureau of Consultation will get to work, asking each member for proof that he is prepared to eliminate the objectionable practice. With the entire industry pledged to cooperate, individual manufacturers can mend their ways, with assurance that they will not suffer a competitive disadvantage.

## The Federal Budget

EXTENSION OF REMARKS
OF
## HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD a column by Mr. J. A. Livingston appearing on the business page of the Friday, March 20, 1959, edition of the Washington Post. Mr. Livingston's article is entitled "Cleveland Fought Surpluses as Ike Fights Deficits," and the article gives a thumbnail sketch of Lewis H. Kimmel's book entitled, "Federal Budget and Fiscal Policy, 1789–1958."

In this day when budget deficits are easily accepted in some quarters as being almost a necessary corollary of Government, it is refreshing to read the comments of past presidents who abhorred and fought against the deficit as a very evil thing. I would commend the whole book to those who do not recognize the inherent danger of budget deficits, but if they do not have the time to read the book, I would at least hope they would scan Mr. Livingston's article for the salutary effect it may have.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Mar. 20, 1959]
1959]

CLEVELAND FOUGHT SURPLUSES AS IKE FIGHTS DEFICITS

(By J. A. Livingston)

President Eisenhower should have such headaches as Presidents Chester A. Arthur and Grover Cleveland. They were beleaguered by chronic surplusitis.

Arthur, a Republican, was fearful he'd extinguish the Federal debt altogether and then money would pile up and up and up in the Treasury. Cleveland, a Democrat, was dismayed by annual income which exceeded expenditures by about $100 million. (Yes, Mr. Copyreader, that's right—only eight zeros, this is millions, not billions.)

Cleveland's Secretaries of the Treasury used the surplus to retire Government bonds, which were noncallable; they bid up prices so sharply that bonds which carried a coupon rate of 4.5 percent sold to yield as little as 1.5 percent. Those who owned bonds—the well-to-do—made handsome profits.

THE HAPPY-HAPPY DAYS

Those were the happy-happy days before the income tax. The principal source of Federal revenue was customs duties (about 55 percent of the total). Then came excises on alcoholic beverages, wines, cigarettes, etc. To stay the surplus, both Arthur and Cleveland wanted to cut revenues, but Congress feared lower tariffs would increase competition from foreign manufacturers and throw Americans out of work.

Budgets then were austere. Outlays in the 1886 fiscal year came to $243 million, of which $63 million was for pensions; next came $51 million for interest on the public debt; the cost of public buildings, lighthouses, and collecting the revenue was $48 million; and the same amount was spent on the Army and Navy. There were no agricultural programs, no foreign aid, no social security.

So Arthur and Cleveland fought surplusitis, even as Eisenhower today struggles with deficits. And that is the point of Lewis H. Kimmel's scholarly book, "Federal Budget and Fiscal Policy, 1789–1958," published by Brookings Institution, and priced at $5. Times change, policies change, therefore budgets and budget philosophy must change. Flexibility is as important in Federal finance as in military maneuver.

Washington, Hamilton, and other Founding Fathers of the Republic managed to bury their numerous differences in one unalterable veritude of Jefferson: "The public debt of one generation should not be permitted to bind the next one." Later, Andrew Jackson, whom today we think of as a New Deal forerunner, pridefully proclaimed the "rare and noble spectacle of a great and growing people who has discharged every obligation." He'd paid off all debt.

Jackson's successor, Martin Van Buren, felt that no circumstance—not even the depression of 1837–38—justified deficits. "The citizens [should not] look to the Government for aid." But Millard Fillmore, held with Clay, Webster, and later Lincoln, that the "paramount issue before the Nation was national growth." James Buchanan snapped right back: Deficits are a disgrace.

Through Grant, Cleveland, and Theodore Roosevelt, Presidents consistently regarded deficits and debts as evil. Woodrow Wilson deviated a trace, saying that borrowing could be justified by permanent benefits, "which it seems unfair that a single generation should pay for." His successors, Warren Harding, Calvin Coolidge, and Herbert Hoover were strict budget balancers. Indeed, Hoover, like Van Buren, felt that private adversity in depression should be handled privately—by charity.

FDR CHANGED PHILOSOPHY

Even Franklin D. Roosevelt, who goes down in Republican oratory as a "great spender," started out with an idee fixe: Budgets should be balanced. Later, he decided he couldn't "leave the problems of our common welfare to * * * the winds of chance. The Government must have the wisdom to use its credit to sustain economic activity in recessions and the courage to withhold it and retire debt in periods of prosperity." Even as Roosevelt, President Eisenhower can subscribe to that in theory, if not in practice.

Kimmel's thesis is that conditions and compulsions of the times make budgets—not preconceived philosophies. And he demonstrates this by observing the concrete actions of Presidents and the theory and dogma of economists from Adam Smith through David Ricardo, Henry C. Carey, Francis A. Walter, and John Maynard Keynes. This notable book is a must for students of Government finance. It demonstrates that immutable change is the one immutable law of economics.

## Antifarm Revolt

EXTENSION OF REMARKS
OF
## HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Antifarm Revolt: Rebellion Seen Unless Workable Program Is Found," written by Roscoe Drummond and published in the Washing Post and Times Herald of today, March 25, 1959. Mr. Drummond makes very timely comments on the agricultural program.

There being no objection, the article was orderd to be printed in the RECORD, as follows:

ANTIFARM REVOLT: REBELLION SEEN UNLESS WORKABLE PROGRAM IS FOUND

(By Roscoe Drummond)

If Congress doesn't soon rescue the American people from an irrational, unworkable, extravagant, and deteriorating mess of a farm program—the third most costly in the whole budget—something is going to happen.

That, I think, is putting it mildly.

What is going to happen if the farm bloc doesn't join with the rest of Congress to halt the Frankensteinian monster of mounting surpluses, aggravated by price supports which pile up bigger surpluses is that, as sure as a hangover follows a "lost weekend," there will be a massive political revolt by the voting consumer.

And then watch out. It won't be good. It won't be good for the farmer. It won't be good for the country. It will be a furious revolt against an evil too long tolerated. The effect will be to strike down what is wrong—a nearly $9 billion agricultural budget which is making matters worse, not better—with little likelihood of putting something worthwhile and reasonable in its place.

The key fact to bear in mind is that the policy of paying farmers—mostly wheat, cotton, and corn farmers—to grow more crops they can't sell except to the Government, which already has to spend a billion dollars a year just to keep them, is a failure.

It is a failure because it is not solving the farm problem; it is aggravating it.

It is a failure because those parts of the agricultural economy which are not living in the oxygen tent of Government subsidy, are better off than those which are—and they may soon be poisoned by the same medicine.

It is a failure because, unless every American farmer is to be put in the vise of Federal control, high rigid price supports will continue to bring larger crops, more surpluses, more drain on the Treasury, and will keep more uneconomic farmers farming.

It is a failure because the bulk of the farm payments do not go to the little farmer, to the neediest farmer, or even to the bulk of all farmers. Take the wheat subsidy, the biggest of all. The bulk of Federal payments go to 10 percent of those who grow wheat. Those who least need the subsidy inevitably earn most of it.

This is not going to go on forever. The American people are going to call a halt to it and they will call a halt with a crash if Congress doesn't replace it soon with something rational.

No sensible person wants to see all Federal assistance to agriculture thrown out the window. That's not the answer. But that will almost certainly be the consequence before long unless Congress begins to put some sense and sanity into the program.

I hope we don't waste much time trying to point the finger at who's to blame. Both major parties have a large responsibility for the plight we are in and there are still some cynical politicians who suggest that there is perhaps one more election to be won—at least in their districts—by perpetuating the present unsavory, unsatisfactory, and insolvent mess.

It is well that Secretary Benson is beginning to speak out more bluntly, as he did at Cornell University this week. Obviously he has been pained beyond endurance by the crack that he has become the most expensive Secretary of Agriculture in history. It hurts because it is true and it hurts more because, as some may not realize, he has been faithfully administering a set of laws and price formulas which this and other Congresses framed and which neither the President nor he has ever had the power to change.

I would like to see Secretary Benson be given, for once a chance to administer a farm problem he believes in and which would adjust price supports to levels leading to the market place, not to storage bins.

The premises of such a program would be: (a) It mustn't cost more than the present program, preferably less; (b) should give the farmer greater freedom, not less; (c) should reduce, not increase, farm surpluses.

Secretary Benson believes that a billion dollars can be saved and farmers greatly benefited by adjusting wheat supports alone to a point which would lead to sales.

My own conviction is that unless a workable and tolerable program is forthcoming soon, a political rebellion hurtful to the farmer will be fanned into flames.

## Editorial Support for Hawaiian Statehood

EXTENSION OF REMARKS
OF
## HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. KEATING. Mr. President, one of the most heartwarming aspects of the recent approval of Hawaii as our 50th State was the strong editorial support accorded the statehood movement by newspapers all over the United States. In numerous editorials, our Nation's great papers hailed the new member of the Union and wished it Godspeed.

I ask unanimous consent that these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, Mar. 13, 1959]

HAWAII, U.S.A.

With surprising alacrity, Congress has approved Hawaiian statehood, and the Union is now 50 strong. We heartily welcome our new sister State of the Pacific and believe that the country will be the stronger and the richer for her admission. Hawaii was prepared to become a State long ago—in fact, bills to that effect have been under consideration for 40 years. But it was not until the admission of Alaska last year, that Hawaiian statehood became a practical certainty.

As we greet 613,000 new fellow-citizens, the country says goodby to its last organized Territory, a relic of the days when Americans, in belated imitation of the European powers, had their own little fling with imperialism. But it has been evident for years that the Hawaiians were eager for statehood and were prepared to accept its responsibilities. There is no sound reason at all why they should not have their own voices in the Government.

The admission of Hawaii will not be official for 5 or 6 months. The Hawaiians must approve statehood in a referendum and elections will have to be held. That means that technically Hawaii will not be represented in the new 49-star flag to be broken out on July 4. But whether it is or not, we already think of it as shining there.

[From the Washington Evening Star, Mar. 13, 1959]

HAIL, HAWAII

At long last, after many decades of striving, the good people of lovely Hawaii are about to achieve full membership in our Union. Our Congress, despite its past deafness to their frequent pleas for admittance, has seen to that by overwhelmingly voting in favor of letting them in, and President Eisenhower will lose no time in signing the historic legislation. They still must go through a few time-consuming legal technicalities, but they expect to take care of these soon enough to have their statehood formally proclaimed on the next Fourth of July, the greatest of our country's patriotic holidays.

Meanwhile, their fellow Americans everywhere extend to the Hawaiian people a hearty welcome into the family of our Republic—the 50th of our States, the prospective new star in Old Glory. Like the Alaskans, who attained statehood only last year, they are geographically far from us, some 5,000 miles away. Yet they are close to us, too, in the sense of becoming one with us as an integral part of the body of our Nation. All hail to them and their beautiful islands. This Union of ours will be the stronger for having them in it.

[From the Kansas City (Kans.) Kansan, Mar. 1, 1959]

SONG OF THE ISLANDS

Statehood for Hawaii was presaged by the admission of Alaska to the Union. The event was widely predicted when Alaska cleared the hurdle, breaking the log jam. There was general agreement that if Alaska were admitted Hawaii should receive the same treatment. President Eisenhower expressed the wish that both Territories be admitted together.

Alaska is our great frontier outpost in the Northwest; Hawaii our outpost in the Southwest, the gateway to the vast Pacific and the Orient. The Hawaiian Islands have been under U.S. influence only 70 years. For decades they were hardly more than an ex-

otic land of flowers, steel guitars and pounding surf. Then pineapples and sugarcane made them commercially important.

The world discovered the islands the day they underwent the baptism of fire of Pearl Harbor. A new era dawned. Today Hawaii is the homebase for U.S. military and naval might that stretches its arms as far as Japan; its eyes constantly alert to any sign of aggression.

All hail Hawaii, the 50th State. The United States of America now stretch one-fourth the distance around this troubled terrestrial sphere—at the 40th parallel.

---

[From the Troy (N.Y.) Times Record, Mar. 13, 1959]

HAWAII WINS STATEHOOD

A 19-year struggle on the part of Hawaii for recognition ended as the House, following action taken by the Senate a day earlier, voted to admit the 50th State to the Union.

In the past Hawaii several times came close to gaining statehood only to be blocked by unyielding opposition by southern Congressmen. This time, southern sentiment was split. Attempts at delaying action were beaten down quickly.

Granting statehood to Hawaii is ordinary justice. In view of the fact that Alaska was accepted several months ago, there was no valid reason for withholding equal treatment. Hawaii has demonstrated capacity for self government. The islands are ready for the new status.

With the approving vote completed, there remain only the formalities before the 50th State becomes reality. It is quite possible that the admission date for Hawaii will be the same as that set for Alaska, next July 4.

Many Hawaiians have worked hard since 1940 to win statehood and we are glad that their efforts finally have been rewarded. We are happy to welcome Hawaii into the Union.

---

[From the Los Angeles (Calif.) Times, Mar. 13, 1959]

FIFTIETH STAR IN THE FLAG

Aloha to Hawaii, 50th State in the Union!

The course of Hawaiian statehood has never been smooth and has in recent years been marked by a succession of disappointments.

But the overwhelming vote in the U.S. Senate and the National House of Representatives to bring the Hawaiian Islands into the fraternity of States is both gratifying and reassuring.

Such doubts as were sincerely expressed concerning the wisdom of granting statehood to a community lying so far distant from the mainland of the United States proved negligible in view of the many advantages both to Hawaii and the Nation which statehood will bring.

Victory for the Hawaiian bid for full share in the National Government was devoid in large measure of political considerations. It came after debate so protracted and searching as to leave little doubt anywhere that the step had the full backing of the Nation at large.

Hawaii's new responsibilities as a State will represent a real test of the island population's capacity for participation in the national effort to preserve domestic tranquillity and international security.

And the decision that changes the Territory's status to full statehood is certain to have a beneficial effect upon our relations with most of the nations bordering the Pacific, where a new era has dawned.

Committed from the first to statehood for Hawaii on the basis of justice and merit, the Times congratulates the people of Hawaii and shares the feelings of satisfaction which are engendered by success for a cause that means so much to the American people.

[From the New Britain (Conn.) Herald, Mar. 13, 1959]

WELCOME, HAWAII

On the desk is a pamphlet, "Statehood for Hawaii—The Case of a Half Million Americans at the Threshold."

Come on in off that threshold, Hawaiians, and welcome to full membership in the United States. The Congress, in an unusual burst of energy and speed, whipped through the Hawaiian statehood bill with only a minimum of opposition.

A few die-hards, for varying political reasons, refused to make it unanimous, but that is hardly likely to stem the jubilation and happiness of the half million who live on Hawaii's eight major islands.

This is a wonderful moment for our country. Hawaii has long been recognized as a modern area, with pursuits just like those of the mainlanders and the same kind of interests as those of the rest of America.

Yet, for varying reasons, Hawaii has been "at the threshold" since 1903 when it first asked Congress to consider statehood. It took all these 46 years to convince America that statehood was deserved.

Now in a rush, the action has been taken to clear the way for formally accepting Hawaii into the Union.

Perhaps it is ironic that a 46-year fight should end in a pell-mell hurry to see who can be first to accept Hawaii.

The pamphlet on the desk is marked "First of a series." We suspect there will be no need for a second in the series.

We are pleased and proud to welcome Hawaii as the 50th State in the United States.

---

## Editorials From All Over the United States Hail Newest Member of Union

EXTENSION OF REMARKS

OF

## HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. KEATING. Mr. President, it will soon be my high privilege to visit Hawaii, the newest member of the Union. I believe I will be the first Member of this body to set foot in the islands since Congress voted to make Hawaii the 50th State.

It will be particularly reassuring for me to revisit Hawaii because of the extremely strong editorial support which has been accorded its admission to the Union. From all over the country, newspapers have hailed this latest addition to our Nation.

I have collected a number of these editorials, and I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 13, 1959]

THE MIRACLE OF HAWAII

The miracle of Hawaii is not that, as a result of yesterday's House vote, she is now to become the 50th State of the American Union. It is, rather, that this State has been created under great difficulties in mid-Pacific, 2,000 miles from the American mainland. Here is a community of eight main islands and a dozen smaller ones approximately equal in area to the two States of Connecticut and Rhode Island and something more than 1 percent of the area of her newest sister State, Alaska.

When Captain Cook passed that way 181 years ago, Hawaii had about 400,000 people. Now she has about 600,000 people, and of those 600,000 people perhaps 12,000 are of pure Hawaiian stock. The others are of a dozen or more principal nationalities and a great many subsidiary ones. They come from China, from Japan, from the Portuguese islands, from the Philippines, from the American South, and from almost any accessible country with exportable labor that one can think of.

The miracle is that this astounding mixture is becoming not a new nation but a new version of the American people. For what are the American people but a mingling of most European races and of some oriental races, bound together by a common language and by common traditions rather than by racial origin?

Hawaii was not a deliberate ethnic experiment. The modern Hawaiian people were produced by what the sugar planters and the pineapple farmers took to be economic necessity. Their ancestors were brought in when it was discovered that the original Hawaiians not only were becoming scarcer, but did not see the reason for working as contract laborers on the plantations. There were some evils, some exploitation, but out of it all has come an intelligent, healthy, and even beautiful race of people who are just as capable of governing themselves as are the people of New York, California, or Texas.

The battle is over now, although some formalities must still be complied with. The President will sign the statehood bill, the people of Hawaii will approve it unless they have changed their minds, and the wide blue water that separates San Francisco from Honolulu will shrink in its political dimensions to a river boundary line.

There are those who look with apprehension to some unhappy moments in Hawaii's labor history, as when a dock strike in 1949 tied up the islands for 6 months. Yet there is no reason to believe that the State of Hawaii will have any more difficulty handling such crises than the Territory of Hawaii did. Why should we expect second-class citizens, which is what the people of Hawaii have been, to stand up for their rights as effectively as do first-class citizens, which is what the people of Hawaii are about to become?

There was one more argument, besides the argument of justice, for voting Hawaii as an equal into the Union. This was that like Alaska she stands on the front line of our defense. Her great industries, sugar, pineapples and tourists, taken together, do not quite equal what the Government spends in the islands. It was said a long time ago, "Put none but Americans on guard." This we have done in Alaska. This we are now doing in Hawaii. Long live the 50th State.

---

[From the Washington Post, Mar. 13, 1959]

HAWAII'S IN

Congress deserves a gigantic and festive luau as well as a garland of leis. Prompt House approval of the Hawaiian statehood bill, following Senate action by only a day, may make it possible to add the 50th star to the flag on the Fourth of July, when Alaska will be officially recognized on the field of blue. Admission of Hawaii was all but assured when Congress voted in Alaska as the 49th State last summer, but the congressional leadership merits especial praise for moving so quickly to complete the task.

The overwhelming votes—323–89 in the House and 76–15 in the Senate—are an exhilarating climax to the long struggle by the people of Hawaii for the full Union status envisaged long ago for their pleasant and thriving islands. It is 40 years since Hawaii first petitioned Congress for statehood. Credit for the happy event can be widely dispensed—to members of both parties in Congress; to the administration; to Delegate BURNS and former Delegate Farrington and her late husband, Joseph R. Farrington; to the Hawaii Statehood Commission; and to a remarkable businessman from New Orleans, George Lehleitner, whose unselfish work supplied so much practical inspiration for both Alaska and Hawaii.

What follows now will be largely anticlimactic. President Eisenhower will sign the legislation, perhaps today. The popular referendum in Hawaii which the bill requires is expected to go overwhelmingly in favor of statehood. What Hawaii will do in the next few months is carry out the necessary formalities to ratify a decision for statehood reaffirmed as recently as 1951.

Hawaii, with an area exceeding that of 3 other States and a population—600,000—larger than that of 6 others, will be an eminently qualified and gracious addition to the Union. Its economy is as healthy as its sturdy democratic traditions, and not the least of its desirable attributes is its position as a genuine racial melting pot. Hawaii may well become a showcase for the nations and peoples of the Pacific of American belief in dignity and equality.

Now that Congress has fulfilled its obligations to Hawaii and Alaska, what about home rule for the District of Columbia as several Members of Congress suggested during the statehood debate? The 86th Congress could make a festive occasion even more meaningful by ending the colonialism on its own doorstep.

---

[From the Nashville (Tenn.) Banner, Mar. 13, 1959]

PACIFIC TIE STRENGTHENED—A 50TH STATE ON MERIT

Welcome, Hawaii.

In voting that statehood, Congress has kept a lonstanding national pledge. It has honored the Territory's sense of governmental responsibility—its own assurance of readiness, along with eagerness, to become a full-fledged member of this Union.

It is a gratifying development, strengthening a tie in the Pacific that is of value to the United States no less than to Hawaii, in both economic and security terms. That fact has been recognized a long time—the mutual interest being a primary factor in the legislative effort yesterday culminated.

That it is the majority wish is evidenced by the size of the affirmative vote—76 to 15 in the Senate, and in the House 323 to 89.

So still a 50th star will be added to the flag—a development freely predicted when Alaska took its place as the 49th State.

They were equally eligible and equally entitled to statehood.

The actual admission will be delayed for several months by the mechanics of procedure, which include holding an election in Hawaii. Because of that, it is anticipated that it will be midsummer, or possibly even October, before the formalities are completed.

The vote finalizing congressional action was a moment for which the 575,000 residents of the last incorporated Territory under the American flag had waited almost half a century.

The Nation has manifested faith in the ability of this island constituency to administer and discharge the responsibilities of self-government; aware that it had internal problems, but confident of its determination to solve them.

America is growing, not by conferment of colonial status on any new possessions, but by extending full statehood on Territories prepared for that—the dignity and prestige of membership in this family.

That was good news for Hawaii. No less is it good news to the continental United States of America.

---

[From the Minneapolis (Minn.) Star, Mar. 13, 1959]

WELCOME, HAWAII

Welcome to the Union, Hawaii. The responsibilities and the expenses of statehood may be more than you thought you had bargained for, but those are costs an individual or a State pays for maturity. Uncle Sam won't be paying so many of the bills now. Yet, as in Alaska, military defense will be the main industry for some time to come.

There had been question about Hawaii's political maturity. Local government in the islands has been run quite largely on a patronage basis. Still, that system isn't unknown on the mainland.

There have been fears about communism, for Harry Bridge's longshoreman's union is soft on the issue and he has a big voice—some persons say the biggest—in island economy. Yet the union is first of all a fiercely practical agency for hard bargaining with employers. That's one reason the cost of living is about 20 percent higher in the paradise of the Pacific than stateside.

As in Alaska, a number of people in Hawaii didn't want statehood. They had largely lapsed into silence for fear of business or political or social ostracism as the enthusiasm for the change became ever more virulent.

Yet clearly the majority in both places did want statehood. Now both areas have it and all Americans know they will live up to the duties of the new status and add a fine touch of cosmopolitanism to Congress.

---

[From the Cleveland (Ohio) Plain Dealer, Mar. 13, 1959]

THE ENCHANTED ISLES

The United States is about to grant statehood to its loveliest jewel, those islands of enchantment in the Pacific which comprise Hawaii. Only a few formalities remain to be complied with to make this the 50th and probably the last State to join this "more perfect Union."

To many malihinis—newcomers from the mainland—Hawaii means Waikiki Beach, orchid leis, surf riding, Diamond Head, the Pali, Pearl Harbor, Hickam Field, or Schofield Barracks. But it is more than that.

It is an agglomeration of people of many racial strains—Polynesian, Caucasian, and oriental—who have learned, and can teach us, how to live together in harmony and graciousness.

It is a land of pineapples and sugar, of steamships and airplanes, where the commerce of Asia and America meets at this crossroads of the Pacific.

It is a community which has learned to harness the automobile to reasonable speeds consistent with safety, where pedestrians have the right-of-way at intersections, where boys and girls in busses cheerfully jump up to give their seats to older persons and where kindness and good manners are a rule of life.

Finally, Hawaii is the show window of the United States where the best wares of Americanism are displayed to the people of Asia. Statehood for Hawaii, along with our grant of independence to the Philippines, will go a long way toward combatting the Communist propaganda lie that the United States is interested in establishing a colonial empire.

Statehood has been the aspiration of the people of the islands for many years. It was mentioned as a possibility by President Lincoln. Originally an independent kingdom, Hawaii voluntarily sought annexation to the United States 60 years ago in the expectation of early statehood. But obstacles intervened until last year when Alaska overcame congressional reluctance to the admission of a territory that was not contiguous to the mainland. With Alaska's admission as the 49th State, Hawaii's designation as the 50th became just a matter of time.

There has never been any question of Hawaii's qualifications for statehood. In population, per capita wealth, amount of taxes paid to the Federal Government, and educational standards it ranks higher than a number of existing States. And the airplane a long time ago demolished the time barrier. It is now possible to fly from Honolulu to Washington in less time than it takes to travel from Chicago to Washington by train.

And so, this year, another star will be added to our flag. To the 50th we say, Aloha.

---

[From the Huntington (W. Va.) Herald-Dispatch, Mar. 13, 1959]

WE WELCOME 50TH STATE

East and west have met, and from the union there has issued the 50th State in the United States of America. The U.S. House of Representatives yesterday completed legislation which made Hawaii statehood a reality. The Senate had approved statehood a day earlier.

That Hawaii can now enter the Union formally as a State comes after six decades of work and hope.

There are some who are puzzled over statehood for what they regard solely as a vacation paradise 1,500 miles from the mainland. They have a hard time reconciling leis and alohas with the traditional picture of a covered wagon on the western plains.

But, as its proponents so rightly contend, statehood for Hawaii is an example before the world of American democracy in action. It bolsters Hawaii's vital defense role in the Pacific. It makes the new State a center where Pacific peoples can study American traditions and vice versa.

Hawaii has passed every test for statehood. It is a community of Americans who have proved east and west can live and work together under a flag of freedom.

Hawaiians pay taxes as do residents of the mainland and serve in the Armed Forces of the United States. Heretofore they have had no voice either in tax or draft legislation.

The new State now will have full voting representation in Congress, the right to vote for President, and to elect State officials. Eighty-five percent of its people are citizens, qualified for statehood by area population, and Americanism.

The economy is sound. Business is in excess of $2 billion a year. More than $2.3 billion in Federal taxes has been paid since the islands became a Territory.

We join in saluting our newest State and are not too concerned about her distance from her sisters. Hawaii is closer to Washington in travel time and communication today than was West Virginia at the time of its admittance to the Union.

---

## Rescue of Battle-Injured in Korea

EXTENSION OF REMARKS

OF

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. HUMPHREY. Mr. President, very often during wartime individuals

perform prodigies of courage which are not suitably recognized. The process of awarding certifications is somewhat cumbersome and tedious and undoubtedly there are many hundreds of fine men who have never received suitable recognition for distinguished service under fire.

One example of this situation was brought to my attention last winter by Mr. Jerry L. Searles of St. Paul, Minn., who described to me an action in November of 1951, involving the rescue of the battle-injured in Korea. Because the individuals involved never received the award for which they were recommended, it gives me a real pleasure to make this small contribution to the proper recognition of their exploit. Jerry Searles, Gerald LaMaide of Flint, Mich., and Walter Ozzie of Galveston, Tex., were the individuals involved.

Mr. President, I ask unanimous consent to have printed at this point in the Appendix of the RECORD a letter from Mr. Searles of St. Paul describing an action in Korea on November 4, 1951.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ST. PAUL, MINN.,
*November 21, 1958.*

Hon. Senator HUBERT H. HUMPHREY,
*Senate Office Building,*
*Washington, D.C.*

DEAR SENATOR HUMPHREY: There is a matter about which I have intended writing you for a very long time, and am just now doing it.

On November 4, 1951, I was in charge of a rescue mission and battle-injured-transportation unit at Mundung-ni, Korea. The two other men in the unit were a Pvt. Gerald L. LaMaide, Flint, Mich., and a Walter Ozzio, Galveston, Tex.; all of us were from the 15 AAA AW Battalion (SP), and were detailed to carry litters, comfort, and transport to the field hospitals at the rear, wounded from the 31st Infantry Battalion, also in our 7th Division.

Under direct fire from the enemy, these two men in my detail distinguished themselves greatly and heroically. Besides carrying out the duties already outlined, LaMaide and Ozzio drove the M-39 tank over the extremely dangerous mountain roads with no visability whatsoever ahead. I gave them driving directions over an intercom system. Our unit carried as many as 17 wounded at one time, setting an unbelievable record. The hardships were fantastically difficult; few men as they, have ever served so well. At the rear, after the work had been completed, we discovered some men who had been placed among the dead who were yet alive. I dispatched Ozzio to the medical unit to report this terrible error, made by we know not whom, and without his arriving at that unit with the greatest speed and under adverse conditions, those men might easily have died.

Officers who viewed our operation were high in their praise. One high-ranking officer made a recommendation that we receive the Silver or Bronze Stars, particularly because we had never had any previous experience and because we were not expected, as noncombat men at the time, to be involved at all in such an operation.

Upon our return to the rear, my recommendation that LaMaide and Ozzio be promoted was acted upon at once: They received their promotions; however, the fact that they never were honored for their exemplary valor and conduct for their performance in the rescue mission has always disturbed me. They were most deserving, and I know for a fact that one other group which was aiding us in the operation did receive the Bronze Stars among them.

One factor that might have interfered with their receipt of this decoration, is that fact that we did little firing upon the enemy from our transportation vehicle. I was quizzed about this later, but stated that inasmuch as we were essentially engaged in the caring for and the rescuing of injured troops it would be well if we did little firing so as not to draw fire upon our vehicle which was heavily laden with injured and dead. Some of the injured were even being given blood transfusions while the vehicle was moving rapidly to elude the fire of the enemy.

I want nothing for myself. That fact I wish to make very clear. I am the honored recipient of the Purple Heart for a wound suffered in that operation. However, it is inconceivable that the bravery and conduct of Ozzio and LaMaide not be rewarded. Theirs was a perfect, selfless contribution.

Is it too late to rectify this serious oversight? I would be pleased to provide you with whatever substantiating information I can and cooperate with you in every way. You have come to my assistance often in the past. I am grateful. Will you please see what you can do in this matter? It is most important.

Thank you sincerely for your past efforts on matters I have referred to you. And, I'll thank you in advance in this case, because I know you will do your very best.

With best personal regards, I am
Very truly yours,
Ex-Cpl. JERRY L. SEARLES,
*Former Serial No. NG27359342.*

## Questionnaire Results From Michigan's Sixth District

EXTENSION OF REMARKS
OF

## HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. CHAMBERLAIN. Mr. Speaker, few of us have been so endowed with wisdom that we cannot profit by sound advice honestly given. For that reason, it is my practice to send each year, to as many homes as I can reach in my district, a questionnaire offering the people I represent an opportunity to give their opinions on some of the most important issues facing us here in Congress.

Under leave to extend my remarks, I want to share my findings with my colleagues by including in the RECORD the results of my poll. They will, I think, find much of interest and some of surprise in this consensus of a district which is evenly divided politically; which is industrial and yet maintains a considerable agriculture; which includes more UAW–CIO workers than any other congressional district in the country; and in which unemployment is at a critical level because of the slump in some parts of the automobile industry.

To me, some of the more interesting aspects of the results are the insistence upon a balanced budget, the unpopularity of present farm support levels—shared, incidentally, by farmers and nonfarmers alike—the nearly unanimous support of a firm stand on Berlin, the overwhelming demand for effective labor reform legislation, the general satisfaction with our missile and space efforts, the heavy backing for continuation of mutual security. I would also call the House's attention to the heavy preponderance in favor of repealing the 10-percent automobile excise tax which I am again sponsoring, and I suggest that any of my colleagues would find much the same result in his own district if any considerable number of his constituents own and drive automobiles, and I do not know of any horse-and-buggy districts.

I was deeply impressed by the flood of responses to this questionnaire in which more than half of the participants added their carefully considered additional comments on these and other issues. These polls, I am convinced, serve the double purpose of not only giving me the benefit of others' opinions, but in stimulating public interest in participating in our governmental processes.

The results of the tabulation are as follows:

| Questions | Percent | | |
|---|---|---|---|
| | Yes | No | Not certain |
| From information available are you satisfied with our missile and space efforts? | 54 | 21 | 25 |
| Do you agree with the President's "pay as you go" emphasis on having a balanced budget? | 84 | 8 | 8 |
| Do you approve of our firm stand with respect to Berlin? | 91 | 3 | 6 |
| Considering world tensions should we continue our mutual security military and economic aid to friendly nations? | 66 | 12 | 22 |
| Do you favor the general idea of broadening social security benefits to include medical services, to be financed by increased contributions by individuals and employers? | 36 | 52 | 12 |
| Do you favor statehood for Hawaii? | 80 | 8 | 12 |
| To provide necessary funds for Federal highways it is suggested that Federal gasoline tax be increased from 3 cents to 4½ cents per gallon. Do you favor this increase? | 33 | 57 | 10 |
| Do you favor repeal of the 10 percent automobile excise tax? | 62 | 26 | 12 |
| Has the Federal Government given sufficient attention to the problems of the small businessman? | 18 | 48 | 34 |
| Do you believe our civil defense effort is adequate? | 32 | 36 | 32 |
| Should labor reform legislation cover the problems of secondary boycotts and blackmail picketing? | 82 | 7 | 11 |
| With respect to education, should the Federal Government: | | | |
| Consider it a local and state problem? | 64 | 24 | 12 |
| Aid school construction? | 42 | 42 | 16 |
| Help pay teachers' salaries? | 20 | 63 | 17 |
| Last session, Congress approved flood control projects in both Lansing and Flint, but provided no funds. Considering budget problems, should we ask funds for: | | | |
| Flint River (cost $2½ million)? | 26 | 46 | 28 |
| Grand River (cost $13 million)? | 21 | 45 | 34 |
| Regarding farm price supports, should they be: | | | |
| | *Percent* | | |
| Increased | 4 | | |
| Decreased | 62 | | |
| Left unchanged | 16 | | |
| No comment | 18 | | |

## Testimony by Donald H. McGannon on Educational Television

EXTENSION OF REMARKS
OF
## HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. SCOTT. Mr. President, in reviewing the testimony of the several witnesses who testified before the Interstate and Foreign Commerce Committee in support of S. 12 on educational television, I was amazed to see the extent of the contributions and support of educational television by certain commercial broadcasting organizations, particularly the Westinghouse Broadcasting Co.

This company, which has an outstanding record in the radio and television broadcasting industry, notably in the field of public service programing, has also convincingly established an equally fine record in its contributions to and wholehearted support of educational television.

I ask unanimous consent that a portion of the testimony which Mr. Donald H. McGannon, president of the Westinghouse Broadcasting Co., so ably presented at the hearings of the Senate Committee on S. 12, be printed in the Appendix of the RECORD. This particular part of Mr. McGannon's testimony contains a very impressive list of contributions of time, equipment, and money that Westinghouse Broadcasting Co. has given in its support of educational television.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

Pittsburgh, KDKA–TV:

1. WBC management personnel prepared for WQED, the Pittsburgh educational television station, their application for a construction permit, installed the equipment and generally assisted in getting the station on the air.

2. WBC provided an operating location to WQED, namely the KDKA–FM transmitter building and tower for WQED's television transmitter. Later it gave WQED this 500 foot tower for their television antenna and land. The present replacement value of this property is estimated at $264,000.

3. A recent grant of $10,000 was made to WQED by the Westinghouse Electric Corp. as part of a major community effort to raise funds for the operation of the station.

Pittsburgh, KDKA:

1. WBC made available engineering services for the preparation of the application and the planning and supervised the construction and installation of Duquesne University's FM station WDUQ.

2. WBC donated a 3,000 watt FM transmitter to the Carnegie Institute of Technology. This transmitter had an original valuation of approximately $10,000 and a fair cash value at the time of the gift of $1,500.

3. WBC gave approximately 63 acres of land and the transmitter building at Saxonburg, Pa., to the Carnegie Institute of Technology for their synchrocyclotron project. The building has approximately 6,400 square feet of area which represented a construction cost at today's prices of about $20 per square foot. Value of the building is $128,000.

4. KDKA presented their complete music library to the Pittsburgh College for Women, now Chatham College. The library represented $25,000 worth of orchestrations of sheet music (fully cataloged) and the cabinets containing the sheet music.

5. WBC contributed engineering services in planning and designing studios for the speech department at Mount Mercy College.

Philadelphia, KYW: In 1953 WBC gave to the Delaware Valley Educational Television Corp. a complete FM transmitter installation, installed and in working order, having an evaluaiton estimated at $75,930.

Boston, WBZ–TV: WBC made a grant to the Lowell Broadcasting Foundation, the licensee of educational television station WGBH–TV in Boston, of a full powered television amplifier that permitted this station to cover a significantly increased area of metropolitan and suburban Boston. The full powered television amplifier afforded WGBH comparable power to that which the commercial broadcasters in Boston are employing. The replacement value of this amplifier is $76,675.

Boston, WBZ:

1. WBC gave Williams College a variety of studio radio equipment valued at $1,425.

2. WBC gave the Springfield Trade School a 1,000-watt transmitter and associated power supply valued at $6,000.

3. WBC donated radio amplification equipment to the South Dakota School of Mines. Estimated replacement value is $400.

California, KPIX: WBC, Inc. (Calif.) took over a chattel mortgage on KQED (the Bay Area Educational Television Association) held by a prior owner at low interest rate. A moratorium for these interest charges was later granted and finally the unpaid balance was forgiven, representing a grant of almost $4.000.

Illinois, WIND: WBC gave to the University of Illinois six radio power rectifier tubes valued at $180 each. Total gift, $1,080.

Indiana, WOWO:

1. WBC gave Tri-State College in Angola, Ind., FM transmitter equipment at a fair cash evaluation of $1,025.

2. WBC gave a 10,000-watt Westinghouse FM transmitter to Taylor University in Upland, Ind. The fair cash value was $4,500.

OTHER AREAS IN WHICH WBC DOES NOT OPERATE STATIONS

New Hampshire: WBC has granted technical equipment to the University of New Hampshire educational station (channel 11) in Durham, N.H. Estimated value of this equipment is $6,750.

Delaware: Westinghouse Electronics Division, Baltimore plant, gave to the University of Delaware approximately $5,000 (replacement value) worth of equipment apparatus and material for use in the university's laboratory.

Texas: Among numerous gifts of equipment to various universities, the largest was a gift of a 5,000-watt television transmitter and related equipment valued in excess of $45,000 to Texas A. & M.

CURRENT AND RECENT WBC RADIO AND TELEVISION PROGRAMS MADE AVAILABLE TO EDUCATIONAL BROADCASTING STATIONS

Contributions of programming in addition to technical and monetary grants mark the continuing support by the Westinghouse Broadcasting Co. for educational broadcasting. Based on the policy determination that public enlightenment can be achieved through showmanlike or entertaining and informative programs, WBC group and station productions in radio and television of a public service or enlightening nature, are made available to educational stations gratuitously and without cost.

Listed below are some of the programs that have been made available;

"Section Sixteen" and "The Challenge," two educational films which signalized the 100th anniversary and activity of the National Education Association.

"Growing Pains," an educational series dramatizing the problems of youth in America and featuring the world-famous educator and psychologist Helen Parkhurst.

"Adventures in Number Plus Space," a series of nine 30-minute programs which utilized the famous Baird marionettes to stimulate the interest of junior high school students in the subject of mathematics.

"Education 157," the first television report on the current status of education.

"Spotlight on Schools," the third yearly series of a unique news program devoted wholly to news on education.

"The Big R," a radio and television documentary which supplemented and supported the President's White House Committee and Conference on Education, and dealt with the problems confronting America's educational facilities and teaching personnel.

"Of Many Things," a radio series of conversation pieces with Dr. Bergen Evans, educator and instructor of English at Northwestern University.

"Books and Voices," with John K. M. McCaffery, noted newsman, commentator, and personality.

"The Rockefeller Reports," a series of six 15-minute readings at the time of the release of the special studies of the Rockefeller Brothers Fund.

"Mental Health Service," designed to develop broader public acceptance of effective treatment for mental illness.

"Get Out the Vote," a series of jingles intended to stimulate the American franchise to vote.

"Let Freedom Ring," a television project geared to serve important aspects of American history, produced by WBC's Boston station, WBZ–TV.

"Benny in Brussels," hour long film spectacular highlighting WBC's sponsored and produced series of jazz concerts at the Brussels World's Fair for the U.S. Department of State which supported American performing arts at the fair.

The Westinghouse Broadcasting Co., has projects in various stages of production upcoming, which will be made available to educational broadcasting facilities.

"The American Civil War," a television series reenacting the famous battles and political conflicts as seen through the photographs of Mathew B. Brady.

"Spectacle of a Man," a project designed to create a more favorable climate for intellectualism.

"The Best of Bergen Evans," a radio series.

"American Literature," narrated by Dr. Frank Baxter.

Public service conference: Educational station broadcasters participated among an invited 200 American broadcasters at Boston in 1957 and at Baltimore in 1958. Conference was designed to better serve the public through exploration and examination of shownmanlike programs that will educate and enlighten.

The WBC history award: Monetary incentive award which includes all commercial radio and television stations and educational stations, excluding only the WBC stations. Award designed to stimulate local stations' production of programs that explore the rich area of local and national American history.

In addition to the aforementioned radio and television group and station programs and/or series, WBC makes available to educational television stations in our markets the Encyclopedia Britannica films which, although the monetary value is not crystallized, we estimate to be worth about $25,000.

## Research in the Field of Health

EXTENSION OF REMARKS

OF

## HON. RUSSELL B. LONG

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. LONG. Mr. President, recently I joined as a cosponsor in the introduction of Senate Joint Resolution 41, which seeks the improvement of the health of man through cooperation in research, research training, and research planning.

In this connection, my attention has been drawn to an article which appeared in the February 1959, issue of Today's Health, which outlines a method whereby many of us may contribute to the furtherance of research in the field of health. I ask unanimous consent that the article, entitled "The Operation No One Talks About," by Elizabeth Thompson Adler, who is from New Orleans, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE OPERATION NO ONE TALKS ABOUT

(By Elizabeth Thompson Adler)

Jack Boyle, a man in his midseventies was admitted to a hospital because of nausea, vomiting, aching muscles, and a high fever of unknown origin. Two days later he died.

His family and friends were stunned. Jack had been considered a remarkably healthy man. He'd never had any serious illnesses, had never been in a hospital before.

In recent months, however, he had lost some weight and his friends noticed he seemed to have lost interest in the things that had always had meaning to him. Occasionally he would complain of his rheumatism, a cold, or a headache. But this was the kind of curbstone conversation one might expect from an elderly gentleman.

As the news of his death spread, there was one universal question: "What happened?" The answers all had a tone of resignation: "Old age finally got him." "The machine just wore out." "Poor Jack—complications."

WHAT WAS THE REAL EXPLANATION?

At the very moment such things were being said in her neighborhood, Mrs. Boyle was sitting in her doctor's office at the hospital. Through a haze of emotional shock and grief, she pleaded for an explanation.

"I'd only be guessing," her doctor told her. "There are so many diseases with similar symptoms. I don't want to guess. Would you permit an autopsy?"

The word had a sobering effect.

"I've always said my loved ones would never go through such a thing," Mrs. Boyle said. "I've always thought it's cruel and futile once a person is gone. But this was all so sudden. I think I'd feel better if I knew what happened."

In this country today too few people consent to an autopsy. Too many case histories are closed with a diagnosis of "senile degenerative diseases." No one in the family questions; no one doubts. And when a physician suggests an autopsy, the relatives refuse.

Doctors, unsure of exact causes of deaths in these cases, are eager to find evidence to substantiate their diagnoses, yet they report constant refusals to their requests for autopsies. They find many people unwilling to discuss the subject because they are afraid, because they don't understand, or they don't want the responsibility.

RECONSTRUCT COURSE OF ILLNESS

The autopsy on Jack Boyle revealed some startling facts. The pathologist was able to reconstruct the course the illness had taken; the symptoms that were unexplained began to have meaning. Examination of the spleen, liver, kidneys, lungs, and lymph nodes showed microscopic tubercle bacilli. Cause of death: miliary tuberculosis.

Because this is a communicable disease, the discovery was most significant to the members of the Boyle family, especially those who had made their home with the patient. The doctor recommended chest X-rays and a series of tests for the tubercle bacilli for all members of the family.

The tests revealed that Boyle's two youngest grandchildren had active pulmonary tuberculosis. This highly contagious form increased the chances of other members of the family being infected. Early detection, made possible through autopsy, spared them this risk.

The benefits of autopsy are far-reaching, not only to families and future generations, but also to medical science. Discoveries are constantly being made at the post-mortem table which lengthen man's life span. Important facts about blood diseases, heart trouble, cancer, and many other ills have been discovered through autopsy. Such knowledge provides a basis for medical education; mistakes due to lack of knowledge can be avoided.

BEYOND THE FAMILY'S CONTROL

Also important is the comfort the family receives when it is certain of the real cause of death. Nothing is more torturing than the thought, could we have prevented it? Mrs. Boyle admitted to her doctor it was comforting to know the cause of her husband's death—to find that it was a condition completely beyond her control.

Why, then, is only a small percentage of people in this country willing to permit autopsies? These are the most frequently heard objections:

The patient has suffered too much already.

This attitude expresses the feeling that the patient still exists and is capable of feeling pain. In some mourners, it is a subconscious rejection of death itself. To others, sanctioning an autopsy means assuming additional responsibility, making more decisions—which they would rather avoid.

I don't want the body to be disfigured.

This objection is voiced by those who have no idea of what actually transpires in the laboratory.

FINAL APPEARANCE NOT AFFECTED

Nothing in the process alters the countenance of the deceased. There is no ruthless handling; no practice operations are performed. The examination is conducted in the presence of the family physician, the pathologist, and other licensed physicians. Medical students do not experiment, although in many hospitals they observe as a part of their training.

Unless the case is very unusual, only a single midline incision is made in the torso. The brain is examined by an opening across the scalp, afterward hidden by the hair. With the same surgical skill employed in the operating room, the vital organs are carefully examined for evidence of disease; tiny samplings of bone, tissue, and fluids are taken for study. Then the incision is sutured and the autopsy is completed.

The surgeon in the operating room is using his knowledge and skill to prolong life in the living; the doctor in the post mortem laboratory uses the same skill and techniques, but his purpose is different. He is seeking to unfold the secrets that will prevent illness and death in the future. In both instances, the feelings of relatives are given the fullest consideration.

There is no fee for performing an autopsy. The report becomes a part of the hospital records. The family may see it if they want, but the usual procedure is for the personal physician to give a résumé of the findings.

I'd rather not know.

Some people find comfort in not knowing the cause of death, especially if there is a possibility that what they will learn could be unpleasant. Others are revealing their fears. Some think, for example, that cancer is hereditary. Therefore, if mother had cancer, I don't want it, and I'd rather not be told.

It will delay the funeral.

In communities where hasty burials are accepted practice, there are those who think an autopsy takes too long and delays arrangements. Actually, the examination takes about 2 hours and can be performed immediately after death.

It's against my religion.

Doctors say this is the reason most frequently given, and seldom questioned, though there is little fact to substantiate such a statement.

Do people really believe the excuses they give, or do they refuse autopsies because they have no occasion to think about such a thing until they are approached while in a state of emotional upset?

To check this theory, the writer interviewed several hundred people who were not under the stress of a recent bereavement and asked them how they felt about autopsies for themselves and their families. Even in the absence of emotional crisis, objections remained the same.

In Europe, a different attitude prevails. Doctors do not have to ask permission of relatives. Only a few countries do not require by law an autopsy on every death. As a result, autopsy has achieved general public acceptance—and added immeasurably to the storehouse of medical knowledge.

Yet in the United States, doctors must be satisfied in many cases with a diagnosis of death which is in large measure opinion as distinguished from fact. They cite three reasons why post-mortem examinations are important:

1. Some diagnoses cannot be made by observation. Tumors of the brain, for example, may spread to the lungs or ovarian tumors to the lungs or to bones and show up on incidental X-rays. The location of the primary lesion can't be demonstrated without autopsy.

2. For research purposes. Correct diagnosis still remains the most difficult and fundamental part of a doctor's job. Whatever his field of specialization, there is perpetual interest in research, and autopsy is one of the most valuable aids.

3. To find an explanation for symptoms (often coincidental) which don't fit in with the patient's primary disease. It takes courage for a doctor to face his own cases in autopsy—the examination exposes the causes of disease and the doctor's understanding and handling of the case. His original diagnosis is put to test, for during autopsy it is held up to challenge and evaluation.

In view of this, how valid are the reasons people give for refusing an autopsy? Do their objections make any more sense than the superstitions of the primitive South American Indians who seal up the eyes, nose, and mouth of a dying person so his ghost will not leave the body and carry off others?

All of us should be concerned about our responsibility in saving life—not only our own, but life in succeeding generations. Through autopsy, your doctor discovers how to prevent certain diseases from recurring within your family, thus prolonging life expectancy.

Discuss autopsy before one of your loved ones becomes ill. If there are differences, resolve them before the crisis comes. Doctors prefer that the decision be a group one, rather than placing all responsibility on one person.

What better gift can you give the world than loving your fellow man enough to do something which makes life easier, richer, and fuller for those who live after you?

## Dumping Films in Russia

EXTENSION OF REMARKS
OF
### HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. BRIDGES. Mr. President, I have said much in the past about the effect of Soviet Deputy Premier Mikoyan's visit to this country which was generated into a triumphant tour by some eager industrialists and bankers in this country.

One of the results of his recent visit is coming to the forefront now with certain motion picture executives trying to insert new life into their industry by dumping films into the laps of the Soviets with the American taxpayer footing the bill.

A recent column by George Todt entitled "How We Dig Our Own Graves," published in the Valley Times (San Fernando Valley, Calif.) offers a very clear commentary on this situation.

I ask unanimous consent that it be printed in the Appendix of the RECORD, and I commend it to my colleagues in the Senate.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

HOW WE DIG OUR OWN GRAVES

(By George Todt)

"We must recognize that we cannot coexist eternally. One of us must go to his grave. * * * So what must be done? We must go to his grave."—Nikita Khrushchev.

A lot of softheaded appeasers in the Nation today have conveniently forgotten that Mr. Khrushchev's brilliant rhetoric, spoken so revealingly in a little white-hot fit of anger, refers specifically to us Americanskies, period. Who will Mr. K detail to dig our graves for us? Will he permit us the honor?

From outward appearances, at least, a certain few bankers and industrialists have already been tabbed by Senator STYLES BRIDGES as preparing to dabble in some questionable traffic with the Reds.

These boys are playing it penny-wise and pound-foolish, as the old saying goes.

Apparently they have forgotten the doctrinaire words of the often quoted Dimitri Manuilsky, formerly instructor in the Lenin School of Political Warfare (recently Russian military chief of the United Nations Organization) who had this to say back in the thirties:

"War to the hilt between communism and capitalism is inevitable. To win, we shall need the element of surprise. The bourgeoisie will have to be put to sleep, so we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched first."

What friendly little fellows these comrades be.

And it appears that our modern "merchants of death" have already forgotten the matter of the scrapiron we sold to Japan prior to the second world war. Our metal pigeons came home to roost, as most of us may recall. So did 1 million wounded Americans, although some of our dead didn't quite make the boat. Nice scrapiron, what?

So some of the boys are at it again. Full steam ahead and damn the torpedoes. One steel company announced shortly after Anastas Mikoyan's arrival on our shores that it had received (and accepted) a $3 million order of a special type of cold-rolled steel for the Kremlin.

Across the nation, here on our West Coast, we find Eric Johnston eager to dump the films of his dying motion picture industry in the laps of the Soviets—which would not be such a bad idea except for one thing. Under the Mikoyan concept of trade with America, the American taxpayers are expected to foot the bill. This is nice work if you can get it. And nobody can say that Mr. Mikoyan didn't try. Didn't quite make the grade this time—but he tried, well enough!

The fact that he was repulsed at the end of his visit on the matter of long-term credits (a few thousand years, perhaps?) was what all the shouting was about—and accounted for Mr. Mikoyan's churlish display of ill-temper as he boarded his airplane for home.

Boiled down to the barest essentials, if Mr. Mikoyan's plan had been okayed, our international traders would have had a real field day for themselves. For instance, Mr. Johnston could have shipped the Soviets all the films that the American public had been failing to shell out enough shekels to make them paying propositions in the past—and then we might all have contributed later to the cinema kitty via our taxes to the Government.

Well, you can't blame anybody for trying. Certainly not Mr. Johnston, who doubtless feels that something like this is necessary if the motion picture industry is to survive in the competitive days ahead. And let's all hope that it does become healthy once more at the boxoffice and survives for many decades to come.

But the way for the cinema industry to restore itself again lies not in flooding foreign markets with its products, to be subsidized through American tax money by citizens at home. There is a better way. The object lesson is close at hand.

Let us recall the monumental works of the now-dead titan of the film world, Cecil B. De Mille. His pictures didn't lose money, did they? Why not? The answer is to be found in the quality and high degree of morality he injected into his works. The old saw that the public cannot appreciate what is good disintegrates before the De Mille image. Yet that is the constant war cry we hear from the studios: that they lose money whenever they put out worthwhile vehicles.

Again, let us examine the superior works of De Mille. How come he never lost money on his many meritorious productions? Did he ever appeal to the shoddy, cheap, oversexed Hollywood ideal—the so-called 14-year-old mind? On the contrary, he emphasized quality work of the highest moral standards and gave us realistic authenticity in his productions—and he cleaned up. Was the most respected name in modern show business, too.

Let the Eric Johnstons of the film world take a page from the correct morality of Cecil B. De Mille and raise the standards of the cinema industry to his giant's level—and the mighty motion picture empire can bloom again without the necessity of dumping its products on the Russians.

All it takes is emphasis on morality and the best type of positive public relations.

I still think the right kind of motion picture work—in the spirit of De Mille and his great epics—could be the greatest force for good inside America and throughout the balance of the world, as well. But will it?

The answer lies in a true and unselfish change of heart. Can Hollywood rise to the challenge of a new and rapidly changing world? Shall we see?

## The Real Truth About Michigan

EXTENSION OF REMARKS
OF
### HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. McNAMARA. Mr. President, on Tuesday I placed in the Appendix of the RECORD the first in a series of articles appearing in the Detroit Times describing the real truth about Michigan.

These articles seek to destroy the myths, the slanders and the lies that have sprung up about the business and financial situation in Michigan.

The second of these articles, which appeared in the Monday Detroit Times, puts the lie to the slander that Michigan has an unhealthy business climate that is driving away industry and killing off business investment.

I ask unanimous consent that this second article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MICHIGAN IS DRAWING BILLIONS

(By James Boynton)

If Michigan has lost its dynamic aggressiveness—if Michigan's economic glories are all of the past and none lie ahead, someone should tell:

The big three of the automobile world which has invested in excess of $3.5 billion in Michigan facilities since 1950.

Someone should tell the 3 million additional people who will be living in this State by 1975, according to Bureau of the Census forecasts, a population growth exceeding that of all States with the exception of California and Florida.

Someone should tell Brunswick-Balke-Collender Co., which is pouring several millions of dollars into a new pinsetter plant that will give Muskegon an annual payroll of $4 million, and into a new school furniture plant in Kalamazoo. All this, after considering locations in Illinois, Indiana, and Ohio.

A modern Paul Revere, perhaps, should start out to spread the alarm to Michigan cities and towns such as:

Ann Arbor, where Parke, Davis & Co. and the Bendix Aviation Co. are building multimillion dollar research laboratories. And where Hoover Ball & Bearing Co. and Buhr Machine Co. have just completed big new plants.

Ecorse, where the Great Lakes Steel division of National Steel Corp. will spend $100 million constructing a new mill.

Kalamazoo, where the Upjohn Co. has commenced a $12 million expansion program, including what probably will be the biggest office building in the State outside of Detroit. Also where the Checker Cab Manufacturing Co. is investing $5 million in capital costs in connection with production of its new passenger car.

WORLD'S RICHEST MARKET

Grand Rapids, where the Bissell Carpet Sweeper Co., Lear Inc., and Blanding Paper Products are expanding to take advantage of being in the midst of the Great Lakes market, the richest in the world.

Someone, too, should warn Walker Cisler, president of the Detroit Edison Co.; Dan E. Karn, president of Consumers Power Co.; William Day, president of the Michigan Bell Telephone Co., and Henry Tuttle, president of the Michigan Consolidated Gas Co., who have announced their companies will spend several hundred million dollars getting prepared for a bigger, more prosperous Michigan.

Detroit Edison is embarked on a $3 billion 5-year expansion program, with $68 million to be spent this year.

Michigan Bell Telephone Co. is expanding at the rate of $75 million a year.

Michigan Consolidated Gas Co. recently announced it would spend $30 million in addition to another $20 million for its new office building in the Civic Center.

Consumers Power Co. this year will make the largest capital expenditures in its history $117½ million.

General Telephone Co. is spending $12.8 million on 1959 expansion.

TIME TO CROW, NOT CLUCK

Seriously, though, all this is why Merritt D. Hill, general manager of Ford Motor Co.'s Tractor and Implement Division, recently said the people of Michigan should be crowing instead of clucking.

Michigan people have been jarred in recent months by an avalanche of vilification and misrepresentations about its industrial climate and charges that the State is headed for virtual bankruptcy.

They have heard a lot of fantasy and a lot of twisted information.

And that talk has taken its toll because Detroiters especially, who have been used to having their city lauded as the mass production capital of the world, are not used to a pessimistic approach.

But there is nothing to justify pessimism.

The best proof can be readily seen by anyone on a few hours drive about Detroit.

NONE LIKE IT IN THE WORLD

On Van Dyke, in Warren, stands the new billion dollar General Motors Technical Center. There are 300 acres of buildings which represent the heart and will of the worldwide General Motors empire, on 900 acres of land. There's nothing in the world that can match it.

In addition, General Motors has poured another billion since 1950 into 23 million square feet of new plants or additions to existing plants in metropolitan Detroit, Flint, Grand Rapids, Grand Blanc, Saginaw, Lansing, and other Michigan points.

In Dearborn there's a collection of new office buildings bigger and more eye-appealing than those in downtown Detroit.

The ultramodern Ford central office buildings from which Henry Ford II and Ernest R. Breech run the Ford empire, just off Michigan and on the American Road, has 950,000 square feet of 12 stories. That's more space than there is in the Penobscot Building (800,000 square feet), Detroit's majectic skyscraper.

The new Ford division office building at Southfield and Rotunda Drive, completed in 1957 is bigger (450,000 square feet) than the Guardian (400,000) and the Buhl Building (316,000).

OVER A BILLION IN NEW BUILDING

Ford has a third relatively new office building in the Rouge manufacturing staff building, 360,000 square feet. But this is dwarfed in space by the 12 new buildings in the research and engineering center, a program completed only last year. The new construction totals about two-thirds of the 3,300,000 square feet occupied by the center.

Ford Motor has spent well over $1 billion on new construction in the Detroit area since 1950, three-quarters of which has been packed into the period 1952–57, inclusive.

Ford's postwar capital expenditures through 1959 total $2.7 billion.

If you want to see what vast sums like this look like in brick and mortar, drive by the new Mercury plant in Wayne, 2 million square feet; the new Lincoln plant at Wixom, 1,785,000 square feet, where Lincolns, Continentals, and Thunderbirds roll of the assembly line; the new chassis parts plant in Sterling Township, completed 3 years ago and comprising 1,856,000 square feet.

CHRYSLER BUILDS FOR FUTURE

In the last 5 years, Chrysler Corp. has built a new Amplex plant and a new engine plant in Trenton, a new Mo Par plant, and a new training center in Center Line as well as a new proving ground at Chelsea.

Chrysler has spent half a billion in the Detroit area increasing capacity since 1950 through new buildings and acquisitions, including the Briggs Manufacturing plants.

Despite the obvious fact that the world's biggest industry has spent $3 billion in connection with long-term programs, the campaign against Michigan continues.

It is impossible to be everywhere to answer all misconceptions.

AMBASSADORS STRIKE BACK

Appreciating this fact, the Michigan Industrial Ambassadors Corp. (200 business and professional men leaders, appointed by the Governor) have adopted a positive approach—selling Michigan for what it is—the richest industrial State in the Nation and its advantages, such as:

Market: Goods can be trucked overnight out of most major Michigan cities to 40 million people in the United States and Canada, the richest concentration of wealth in the world, contributing nearly one-third of the gross national product. Right here in Michigan they can deal with the largest percentage of homeowners in the United States, who enjoy the fruits of Michigan's holding first place in total income derived from manufacturing.

Population: Michigan's population is growing faster than any other States except California and Florida. By 1957, the State's population will increase 3 million over the 1955 total. Since 1954, the State's population has increased 24 percent and the accent has been on youth, with more than 42 percent of the population increase being persons less than 20 years. In the metropolitan Detroit area alone, there's a concentration of 3,900,000, $5 billion retail market.

Skills: Michigan has a large pool of skilled labor, the largest in the world. It has technicians who know how to master mass productions and who are experts at automation. A new company can come into Michigan and swing into almost immediate operation.

THERE'S MONEY ENOUGH FOR ALL

Banking: As a banking capital, Detroit banks are in a position to handle almost unlimited financial requirements. In recent years, Detroit has passed Philadelphia and Los Angeles in volume of bank debits (check volume) to individual accounts, the best single measure of over-all business. Only New York and Chicago top Detroit in this respect. Savings deposits also are at a new high and banks have ample funds to lend.

Seaway: The Seaway will provide Detroit with good, fast, cheap transportation, particularly for raw materials, such as iron ore. It also will boost Detroit's already leading position in foreign trade, which last year exceeded $2,073 millions.

Water: Water has become a big factor in industrial location and Michigan is tops in that respect. It has plenty of water for industrial users who use huge amounts of water daily, such as the chemical and steel industries.

Education: Michigan contributes more of its tax revenues to higher education than any other State in the Union, a point that must appeal to new settlers in the State. Michigan's professional schools also are turning out each year hundreds of potential leaders in the professions, business, and industry.

---

## Faith, Hope, and Hagerty

EXTENSION OF REMARKS

OF

## HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 25, 1959*

Mr. ENGLE. Mr. President, I have just read in the March 24 issue of the New York Times an article by James Reston and an editorial which I should like to bring to the attention of my colleagues. They point up the fact that the American people are in a large degree ignorant of the Berlin crisis—of the physical situation there, the background of the crisis, and the dangers involved. I believe that the American people are uninformed as to the Berlin situation because the President has failed to use his office to sufficiently inform the people. The articles make some illuminating observations, and I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

FAITH, HOPE, AND HAGERTY—BRIEFINGS ON CAMP DAVID TALKS FAIL TO FILL THE PUBLIC IN ON BERLIN CRISIS

(By James Reston)

WASHINGTON, March 23.—There was considerable interest and some dismay here as a result of the disclosure in the New York Times this morning that 39 percent of those questioned in a national spot check did not know that Berlin was an enclave in Communist East Germany 100 miles from the West Berlin border.

If this was even approximately accurate, officials here commented, something should be done to review the Government's policies in the field of foreign affairs. This conclusion was reinforced by complaints from members of the powerful Senate Foreign Relations Committee that even they had not been briefed on this weekend's conversations between President Eisenhower and Prime Minister Macmillian.

Part of the reason for the paucity of information about the State Department's policy for the forthcoming Big Four Foreign Ministers' meeting on Germany is that the policy itself has not been clearly formulated.

Another factor is the illness of Secretary of State Dulles and the simultaneous illness of Andrew H. Berding, Assistant Secretary of State for Public Affairs, who is Mr. Dulles' principal spokesman.

When he was running the State Department, Mr. Dulles was not only the principal

formulator and negotiator of foreign policy but the principal spokesman and witness on Capitol Hill as well.

He was interested in public information. Aside from his official appearances on the Hill and his weekly news conferences, he held many background meetings with legislators and reporters. These sessions nourished the general flow of diplomatic information from Washington to the country.

EVERYONE IS CONSIDERATE

With the Secretary seriously ill, everyone is being considerate and gentlemanly.

The President is being extremely considerate toward Mr. Dulles, saying that he himself must decide whether he can carry on his duties.

Mr. Dulles is being gentlemanly toward the President and the Acting Secretary of State, Christian A. Herter. He is talking daily with the State Department and he has had two sessions with his principal aids and the British on the Eisenhower-Macmillan talks, but he is not attempting to define policy or interfere with Mr. Herter's responsibilities.

Similarly Mr. Herter. He is avoiding news conferences and holding his appearances on Capitol Hill to a minimum. Even when he has been asked for personal information or background sessions on Berlin, he has explained that he wants to avoid doing anything that might give the impression that he is trying to take over the Department in Mr. Dulles' absence.

Inevitably, this has reduced the flow, not of general information about the firmness of the U.S. position on Berlin, but of information on the increasingly important diplomatic negotiations concerning how the United States and its allies intend to implement their policy of firmness.

The task of informing the reporters during the Eisenhower-Macmillan talks was taken over by the White House press secretary, James C. Hagerty, and the British Foreign Office's spokesman, Peter Hope. The general impression since Mr. Macmillan arrived last week is that this procedure has not worked too well.

THE GREATEST IS FAITH

It is a policy of faith, hope and Hagerty, and of these the greatest is faith.

The reporters were kept in Gettysburg, miles away from Camp David. The reports of the meetings by Messrs. Hope and Hagerty were far from complete.

Indeed, Mr. Hagerty appears to have been persuaded more by the necessity of British internal politics than by the need to enlighten the American people.

There were sharp differences between him and Mr. Hope on the extent of the President's commitment to a summer summit meeting. While these were not allowed to show themselves in the briefings, they were no less real.

Thus, the British spokesman privately was describing the President's commitment as "unconditional" and without regard to results at a preliminary foreign ministers' conference and Mr. Hagerty was doing nothing to correct this impression. The result was that Mr. Macmillan has been credited with a great personal triumph and the President with having executed a complete about-face.

Those officials who had personal knowledge of what went on at Camp David were not available to the reporters, and those who were available either were not informed on important details of the conversations or were under instructions to avoid direct replies.

There is some justification for this at the moment. Differences still exist between London and Washington on some details of possible compromises with the Soviet Union and officials here feel there is no point in advertising them to the world.

Also, Moscow is taking advantage of every opportunity to blanket the Eisenhower-Macmillan talks with its own propaganda. The day before the British Prime Minister arrived here, Premier Nikita S. Khrushchev called an unusual news conference in Moscow and managed to dominate the news, even in this country, by agreeing to a May 11 foreign ministers' meeting before he had even received Western notes suggesting that date.

Officials here are concerned about the evidence that the public is not well informed on the crisis. There was some talk here today of having Mr. Herter and Mr. Macmillan hold background conferences to try to correct the situation.

---

OPINION ON BERLIN

An illuminating picture of American public opinion on the Berlin crisis was provided by this newspaper's survey published yesterday. It is no surprise that the survey found the American people generally support President Eisenhower's firm stand on Berlin, but large numbers of people, the survey suggests, know little about the Berlin problem and have little appreciation of its potentialities or causes. The parking lot attendant in Atlanta who said that because he is a working man, "I don't have much time to read about these things," and the New York cab driver who couldn't listen to President Eisenhower's speech last week because his children insisted upon listening to rock 'n roll music apparently typify many people in this country. It is a sobering thought.

It is a tribute, of course, to the great confidence the American people have in President Eisenhower that even many of those who know almost nothing about the Berlin situation are willing to accept his judgment. Yet that kind of blind trust has its own dangers. Certainly the survey's picture of opinion does not entirely bear out the President's confidence that "the American public is more soberly aware of the true situation than a lot of people" in Washington.

How can this situation be corrected? Obviously it is up to the communications media—newspapers, television, and radio—to do the job that has not adequately been done to date. Nor can these media dodge this duty on the plea that the public is more interested in other matters. In a democracy there is no public interest more important than the creation of an alert and well informed public opinion. Much more can obviously be done in this area than has been done, and it needs doing badly.

---

## The Revolt in Tibet

EXTENSION OF REMARKS
OF
### HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. JACKSON. Mr. President, the Communist use of brute force is dramatized once again by the eloquent statement of the eldest brother of the Dalai Lama, Mr. Thubden Norbu, which I received this morning in a telegram from Robert Ekvall, of the Far East Department at the University of Washington. I ask unanimous consent that the telegram quoting the brother of the Dalai Lama be printed in the appendix of the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

While at the University of Washington the eldest brother of the Dalai Lama, Mr. Thubden Norbu, made the following statement through me to the American public: "The revolt which has broken out in Tibet expresses the resistance of the people of Tibet to Chinese Communist aggression and oppression. The Chinese Communists have indiscriminately killed thousands of men, women, and children. If they are not able to subdue the Tibetans they are apparently determined to pursue a policy of extermination. When they have made an end of the Tibetan people they intend to fill Tibet with Chinese. There is little hope for my people unless the people of the world who stand for liberty and justice come to the aid of the Tibetans and right this great wrong. I can only appeal to all who love freedom to help us in this our time of greatest need."

This statement was made by a man who feels that maybe he alone has the chance to appeal on behalf of his people. It was an eloquent and moving statement and should not go unheard and unanswered. He, too, cited the Hungarian debacle. I hope this can be used to good effect.

ROBERT EKVALL.

---

## Tribute to Senator Lyndon B. Johnson

EXTENSION OF REMARKS
OF
### HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. BIBLE. Mr. President, a veteran Nevada newspaper editor, Mr. A. E. Cahlan, of the Las Vegas Review-Journal, in his column "From Where I Sit," on March 18, 1959, had high praise for our distinguished majority leader, the senior Senator from Texas [Mr. JOHNSON], and made some predictions about the future. I share the sentiments of my good friend, Al Cahlan, on the dynamic, around-the-clock leadership provided by LYNDON JOHNSON. I ask unanimous consent to have this most illuminating column printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

FROM WHERE I SIT
(By A. E. Cahlan)

Senate Majority Leader LYNDON JOHNSON will be the next President of the United States or will name him.

That's not my opinion, but is one most frequently expressed in the confines of private conversation on Capitol Hill. My own thought is that the astute Texan is a man of destiny—that he will be the next President, and will rank with the greatest in American history.

It has been my privilege to know Senator JOHNSON intimately and as a friend, and to have followed his career in detail ever since he became leader of the Senate. In my mind, he is one of those rare individuals who appear in times of emergency in this land of ours, trained to meet the particular situation that endangers the future of the Republic, and thoroughly able through temperament, ability, and courage to take charge.

To me, LYNDON JOHNSON has all the qualities that made Abraham Lincoln great. I made this statement to Washington friends of his not long ago and found that their close association with the Texan had con-

vinced them of the same thing. I do not qualify my prediction as some do. I am certain that, barring a new physical barrier that does not now exist, he will be nominated and elected by a majority that will rival those of Franklin D. Roosevelt in his greatest year.

While JOHNSON steadfastly denies any presidential ambitions and says he will not be a candidate, that can be written off as just good political strategy. Beneath the surface, the Senator's close supporters are quietly laying the groundwork for the big battle which is as yet a full year away.

Most potent force in the JOHNSON camp is the working units of the Senatorial Campaign Committee, an organization that has no real ties with the national committee headed by PAUL BUTLER. Members of the committee are now working with the northern industrial-unionized sections of the country to overcome the "Southern Senator" label which opponents hope will defeat him come convention time.

Too, only a few writers over the land have grasped the full significance of JOHNSON's deliberate including of Texas as a Western rather than a Southern State, something he has enjoyed doing for many years now.

The big secrets of JOHNSON's success are: (1) his great personal charm (I have met few men in my long newspaper career who have the tremendous magnetism this man has) and (2) his rare generalship of such things as the civil rights hot potato, his guidance of Hawaiian statehood and other difficult processes of legislation which JOHNSON makes appear easy.

Even Senator PROXMIRE, freshman from Wisconsin, who is constantly attacking JOHNSON, recognizes the leader's finer points. He is merely angling for credit for JOHNSON's defeat at some future date, if in truth he is defeated. Sort of like the prophets who predict dire events. If they happen, they're remembered and glorified. Usually they're forgotten and lost.

PROXMIRE is essaying the David and Goliath role, but his slingshot is not reaching its mark and won't. JOHNSON is so far ahead of his detractors, they make him even greater by their prattlings.

Surrounding JOHNSON are the best political brains in the country. He has in his camp the most astute politicoes in the Democratic Party along with some of the ablest former newsmen. He has a personal organization which, when the word is given, can sweep the Nation.

## Forty Years of Service

EXTENSION OF REMARKS
OF
### HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of March 21, 1959:

FORTY YEARS OF SERVICE

The American Legion well deserves the accolades which have come to it from many military and civilian sources on completion of its 40 years of active and constructive service to the country for which its members have fought in two world wars and the Korean conflict. From its small beginning in Paris in March of 1919 to its standing today as the largest organization of war veterans in history, the Legion has exemplified the highest standards of citizenship. Its members not only have served faithfully in defense of the Nation in time of war but have devoted much energy, money and time to character building, civic advancement and promotion of Americanism, as distinguished from foreign isms, in time of peace. We join in saluting this worthwhile organization as it enters another decade of service to the country.

## Power Problems in the Development of the Snake River

EXTENSION OF REMARKS
OF
### HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. MORSE. Mr. President, there was published in The Oregonian of March 19, 1959, a very fine letter to the editor written by Gus Norwood, executive secretary of the Northwest Public Power Association. In the letter Mr. Norwood discussed some of the serious power problems which confront us in connectioin with the development of the Snake River. I ask unanimous consent that Mr. Norwood's very fine letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WORTH WAITING FOR

To the editor: Your editorial on the Middle Snake omits several ideas necessary to a balanced picture.

In order to insure adequate opportunity for complete research on fish passage methods, Congress can simply reserve the Middle Snake for five years so no license can be issued while intensive fish studies continue.

Our testimony at the Army hearings for conditional authorization of Nez Perce Dam amounts to the same thing. Either approach is sound.

We do not agree with the editorial that the alternative plan has benefits comparable to those of Nez Perce. At 1.5 mills per kilowatt-hour, Nez Perce power is the cheapest available new industrial power supply in the United States. Furthermore, the Nez Perce Dam would cost $150 million less than the two alternatives.

High Mountain Sheep power, if developed by the private utility syndicate, would cost three times as much and achieve only 50 percent development. Its high cost power will attract no industries to Oregon.

Nez Perce Dam, at 2,500,000 kilowatts, would exceed Grand Coulee and even Russia's 2,300,000-kilowatt Kuibyshev Dam, which is now the world's largest. The Nez Perce Dam site is a great prize and it belongs to the public. Why give it away?

Indeed, further studies may warrant increasing the height and storage at Nez Perce for even greater benefits and more comprehensive development. We urged the studies but the Army pleaded lack of time and budget.

The stakes are great. The ultimate annual value of power from Nez Perce Dam and the Salmon River is about $120 million, or greater than that of the entire output of the Tennessee River. The comparable wholesale value of fish is about $6 million. The ratio is 20 to one. But this is not to say that either should be sacrificed. The goal is both power and fish.

The Nez Perce Dam is one girl worth waiting for. The advocates of a quick decision are the usual quick-buck private utilities.

GUS NORWOOD,
*Executive Secretary, Northwest Public Power Association.*

## Padre Island, Tex.

EXTENSION OF REMARKS
OF
### HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. YARBOROUGH. Mr. President, Padre Island in Texas has been called Isla Blanca. Translated from the Spanish, this means Island of White.

This lovely spot is one of the few places on our Nation's coast which has not been developed in small plots by private ownership. To preserve this island, which is a playground, game habitat, and historic location, for the enjoyment of our Nation, I have introduced S. 4, a bill to make Padre Island a national park. I feel that this semitropical isle, situated in a clime of palms and sun, as it is, could easily become a winter playground for the Nation.

The Garden Club of Houston, Tex., has passed a resolution in support of this proposed legislation. And, in addition, the Houston Press recently printed a story describing the island.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolution by the Garden Club of Houston, Tex., and also the story under the heading "Padre Isle: Diamond in the Rough," written by Mr. Louis Hofferbert, and published in the Houston Press on Monday, March 23, 1959.

There being no objection, the resolution and the article were ordered to be printed in the RECORD, as follows:

THE GARDEN CLUB OF HOUSTON,
*Houston, Tex., March 19, 1959.*

Hon. SENATOR YARBOROUGH,
*Senate Office Building, Washington, D.C.*

DEAR SIR: Our organization passed this resolution regarding Padre Island and we would like to bring it to your attention:

"*Resolved*, That the Garden Club of Houston take whatever action seems advisable to support proposed legislation to make Padre Island a national park."

The club takes this action because:

1. Far too small a percentage of our national seashore areas has been preserved for public recreation and relaxation and Padre Island is the only large, as yet undeveloped seashore area on the combined Atlantic and gulf coasts.

2. The national parks survey has shown Padre Island to be highly desirable for preservation as a national park because of its scenic beauty, its historic and scientific interest, and its great potential as a recreational area.

Very truly yours,
Mrs. WILLIAM S. COCHRAN, Jr.,
*Conservation Chairman.*

[From the Houston Press, Mar. 23 1959]

PADRE ISLE: DIAMOND IN THE ROUGH

(By Louis Hofferbert)

CORPUS CHRISTI, March 23.—A man who has done much to push private development of Padre Island favors creation of a national park on the island.

John L. Tompkins, developer of Padre Beach near the southern tip of the 110-mile-long island, said:

"A national park on the island would be a wonderful thing, if it is done with reason."

He favors a park that would embrace some 15 to 40 miles of the long slender island.

Two legislative proposals have been made for a Padre Island National Park. Neither of them spells out exactly how large such a park would be.

A bill in the U.S. Senate by Senator RALPH YARBOROUGH reads "for the purpose of establishing a national park on Padre Island."

And a bill in the Texas House by Houston Representative ROGER DAILY would authorize the State "to acquire * * * the land constituting Padre Island" for the creation of a national park.

FOR ALL THE PEOPLE

All those who advocate having a Padre Island National Park recognize that in addition to the unique features of the island, making a park there is the only way to save the Nation's last great beach for the benefit of all the people.

Said Mr. Tompkins:

"Creating a national park would boom land values. And creating a park would attract many visitors. Whatever is done, the National Park Service would have to be sure to provide the accommodations needed for their pleasure and comfort."

Mr. Tompkins is an ardent advocate of tourist development. He has just returned to his Corpus Christi home from a Mexico City roads conference. His island projects include both tourist accommodations and homesites for winter or permanent residents.

He maintains a home at Padre Beach as well as in Corpus, and he envisions the southern tip of Padre as "another Miami Beach within a few years."

DONATED PARK SITE

Mr. Tompkins' own development takes in only a fractional part of the island.

His Padre Beach embraces 1500 acres—about 5 miles along the narrowest part of the island. Mr. Tompkins has donated a strip across the island at the northern end of his property to Cameron County, which is now being developed into a county-controlled public park.

Another such park—Isla Blanca Park—takes in the southernmost tip of the curving island.

OWNED BY SYNDICATES

Several syndicates hold title to most of the island whose full name is Isla de Padre Nicolas Balli.

The ownership, in which holdings are measured by miles rather than acres, lies primarily in the A. R. Jones interests of Kansas City, Mo.; the Gilbert Kerlin-Jonathan Conrow group in New York; and the Fisher interests of Chicago.

Of these, the Jones group controls most—approximately 80 miles, or better than two-thirds of the entire island.

Aside from the area around Port Aransas, and the development at Padre Beach, the only diversified ownership is along the southern edge of the strip owned by the Kerlin-Conrow interests.

That group has sold approximately 70 tracts of varying size. There has been no development of these tracts so far.

Estimates of land values on the island vary widely.

There are some who believe the large landowners should give the State or Federal Government title to a "reasonable" portion of the island for a purely nominal or token sum.

Mr. Tompkins believes a "fair general price for the undeveloped beach" would be about $100 an acre.

## Origin of the American Legion

EXTENSION OF REMARKS

OF

### HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. FENTON. Mr. Speaker, as a member of the American Legion since its inception, 40 years ago, it has been my privilege to have seen its tremendous growth and influence year after year. As a past commander of my local post, and down through the years, I have looked with pride upon the accomplishments of the American Legion, not only for its own membership, but for veterans generally.

Under unanimous consent, I am including with my remarks in the Appendix of the RECORD a very fine article, entitled "Origin of the American Legion," written by my good friend, Mr. Walter S. Farquhar, concerning the origin of the American Legion. This article appeared in the Pottsville Republican under date of March 17, 1959:

ORIGIN OF THE AMERICAN LEGION

(By Walter S. Farquhar)

This year, March 15 to 17, marks the 40th birthday of the American Legion.

Born overseas was American Legion, at Paris, March 15 to 17, in 1919. Its original caucus was held in the Cirque de Paris, a theaterlike arena in the French metropolis.

Theodore Roosevelt, Jr., called the caucus to order, and generally is looked on as father of the organization. The name was suggested by Maurice K. Gordon, a major in the 36th Division, and adopted after thorough discussion.

Not long afterward, May 8 to 10, again in 1919, the Legion held its first caucus on American soil, with Theodore Roosevelt, Jr., presiding once more.

And then came the first national convention, at Minneapolis, still in 1919, on November 10 to 12, with many of the delegates still in uniform. And the parade that year was in a real snowstorm. Later events ran into snows of confetti and ticker tape.

It was then Franklin D'Olier, of Pennsylvania, became the first national commander, and Indianapolis was selected as the headquarters site, because that city is near the theoretical national center of population. There, at present, stands a handsome $2,500,000 building, provided rent free by the State of Indiana.

Legion's second national convention was held in Cleveland and its third at Kansas City, the latter event being marked by the presence of famous commanders of World War I. Marshall Foch, of France, was there—having been in command of all the Allied armies, John J. Pershing, "Black Jack," General of the U.S. Army attended. Adm. Lord Beatty, of Great Britain, General Diaz, of Italy, and Lieutenant General Jacques, of Belgium, were there.

Care of the disabled always has been a concern of the American Legion, which includes veterans of World Wars I and II and of the Korean war, regardless of overseas service. The Legion holds a soldier must go where he is ordered and cannot choose to fight overseas. It has backed the rights and patriotism of servicemen strongly.

It has gone in for other national and community service, its baseball program during the summer being aimed against juvenile delinquency and in support of the ideals of sportsmanship.

Persons who remember the Grand Army of the Republic posts, following the Civil War, are aware that the "Boys in Blue" were a strong force, in inculcating patriotism, for many years after strife between the States. But the GAR made the mistake of limiting its membership to those who had served in the Civil War. Even Spanish-American veterans had to form an organization of their own. Hence, the GAR died with its last survivor.

American Legion, formed overseas, changed that policy to one of organization in perpetuity, by welcoming veterans of subsequent wars. Hence, the organization we know today is not likely to die out. And, if there should be a long period of peace, sons of Legion veterans are likely to carry on in the interim.

Pamphlets of the 40th anniversary carry a picture of the first caucus, in the Paris arena. The large hall was not filled, but the delegates were organized into groups as in a political convention. Plaques telling the designation of military divisions protruded in the aisles like those of States at presidential conventions. Conspicuous in the front was the placard of the 28th Pennsylvania Division, "The Iron Division" which had a big part in storming the enemy's thought-to-be-impregnable position in the Argonne Forest, the most brilliant victory ever achieved by American arms.

Although awareness of the occasion's importance was registered on the countenances of all, the delegates could not hide the fact that they were weary—and homesick. They had been in uniform for several years and had fought through "the war to end wars." They had lived like animals, in the trenches, amid filth and vermin, and in constant danger of their lives. The war had been over for 4 months and they were eager to come home. But they lingered on to form the Legion.

Such was the origin of American Legion. Now there are 32 posts in Schuylkill County, Pa., alone.

## Why Not Enforce Existing Law?

EXTENSION OF REMARKS

OF

### HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, the fair trade bill, H.R. 1253, now before the Interstate and Foreign Commerce Committee endeavors to make legal—by setting aside antitrust protection—resale price maintenance. Resale price maintenance legislation is not needed to prevent predatory price cutting. The Sherman Act and the Robinson-Patman Act—particularly section 3—have been passed by previous sessions of Congress to prohibit such predatory price cutting.

Now we are asked to set aside the law providing these protections and enact a law to shackle the free enterprise system.

Is it not about time that Congress, through its committee, stopped buying a "pig in a poke," accepting and dignifying the proponents claims as valid? Rather, we should investigate why so many proponents of this bill feel endangered by predatory price cutting which is already illegal. Let us first decide the shortcomings, if any, or lack of enforcement of existing law before we impose federally sanctioned price control.

## Connecticut College for Women, Theater Benefit and College Background

EXTENSION OF REMARKS
OF
### HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. KOWALSKI. Mr. Speaker, the Connecticut College Club of Washington will present a preview performance of "The Lady's Not for Burning," by Christopher Fry, on Monday evening, April 6, 1959, at the Arena Stage Theater, to benefit Connecticut College for Women.

This college, located in New London, was incorporated in 1913 as the first private college for women to be established in the State of Connecticut. Connecticut College is a private, gift-supported, 4-year liberal arts college that grants the bachelor of arts and master of arts degrees.

In less than 50 years, the college has become one of the foremost independent colleges for women in this country. As the reputation of the college developed, the original student body of 101 in 1915 increased gradually to 915 students in 1959. At the same time, the geographical representation has increased from the original 9 States to 37 States and 15 foreign countries. The students enjoy the privilege of attending classes instructed by a faculty that numbers more than 100 distinguished men and women, drawn from the world's leading colleges and universities. The students' educational advantages are augmented by their participation in special college programs, such as those supported by agencies like the U.S. Public Health, the American Cancer Society, and Naval Research; or by enrolling in the nationally known Connecticut College School of Dance, in the summer, studying in the 286 acre college arboretum, or by observing and practice teaching at the college nursery school, at its affiliated high school, or the adjacent Lyman Allyn Art Museum. During the last 35 years the college has managed the development and increase of its educational resources without operating on a deficit.

However, today increased costs and the fact that the school has little endowment or other income have created a crisis in its operation. After careful study of the situation, the board of trustees has decided to seek $3,100,000, referred to as the 50th anniversary fund, from its alumnae, parents, and friends. By 1961 the college hopes that this sum will be available to provide salaries, scholarships, buildings, and books.

Under leave to extend my remarks, I include as part of these the statement of the president of the college, Rosemary Park, in the 50th anniversary fund pamphlet:

STATEMENT BY ROSEMARY PARK, PRESIDENT OF THE CONNECTICUT COLLEGE FOR WOMEN

Unlike many other colleges Connecticut College was not developed through the initial generosity of one donor or of one family. From the beginning it has depended upon the interest and understanding of many people.

When the college incorporators in 1913 determined on New London as the site for the new college 5,000 citizens of the town contributed toward the erection of its first building, New London Hall, which now houses the bontany and zoology laboratories and classrooms. Many of the large donors to the college also knew about its program at first hand because they lived in the area and saw it grow day by day.

This was true of the Palmer family whose gifts built the library and the auditorium, and of the family of Morton F. Plant who gave the original endowment of $1 million, and the first stone dormitories, Plant and Blackstone. They subsequently established the Henry F. Plant Memorial Fund for government internships. It was also true of the Bill family whose bequest made the laboratory and classroom building, Bill Hall, possible. The generous gift of Mrs. Edward S. Harkness for a dormitory and a chapel came about too through her proximity to the college.

All these were substantial donors, but they were joined by thousands of others in Connecticut and beyond, who have felt a concern for the development of the college. Hundreds contributed to the college infirmary, many hundreds more to the Crozier-Williams Center, finally made possible by the generous bequest of Mary Williams Crozier, of Washington, D.C.

A lively inheritance like that of Connecticut College puts the present under obligation. The college believes its record will show that it has used its talents wisely, not buried them for unimaginative safekeeping, but exploited them for the benefit of its generations and the glory of its benefactors.

At this time in its history, at its half century mark, its needs are different from the necessities which earlier donors so generously provided, but they are no less necessities.

Through the 50th anniversary fund, salaries and books, scholarships and faculty housing and a physical education and recreational building will enable Connecticut College to continue its remarkable progress. As in its first half century, so again in its second, Connecticut College will depend upon the enthusiasm of alumnae and upon the understanding of all those who know its work and its promise.

## Women Won't Need To Shop Any More

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, the consumers of this Nation shopping for sales, a cheaper price, a bargain, make millions of daily decisions which in total establish the prices of merchandise.

The right price is that price the buyer will pay by choice after comparing competitive items. Other matters, such as credit terms, delivery, warranty, and the like, are present, but change not the fact that the price is, by definition, the mutual choice made by buyer and seller. The buyer may haggle to get the price reduced. The merchant may hold the merchandise for a period, reduce it, have a sale, or throw in a bonus. The sales price is still the amount the buyer will pay.

Now by Federal law, known as fair trade, H.R. 1253, the Federal Government is to be asked to set aside antitrust law and let the manufacturer set the retailers' price. Is the give and take of the marketplace between buyer and seller now to go out the window? Might as well tell the women, as one fair trade exponent commented, "It won't be necessary to shop any more."

## Dedication of Page Elementary School

EXTENSION OF REMARKS
OF
### HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and an article from the Public Spirit of Ayer, Mass., dated March 12, 1959:

THE PUBLIC SPIRIT,
*Ayer, Mass., March 14, 1959.*

Hon. EDITH NOURSE ROGERS,
*House of Representatives,*
*Washington, D.C.*

DEAR MRS. ROGERS: I am enclosing the news story from the March 12 issue of the Public Spirit, with the account of the dedication in Ayer of the Page School, this town's first new elementary school in over 80 years. This school serves the young people of Ayer and children of military personnel of Fort Devens.

Because of the great historical significance of this dedication, the people of our town and Fort Devens would be honored, I am sure, if this news story would appear in a coming issue of the CONGRESSIONAL RECORD.

With every good wish, I am,

Sincerely yours,

MINOT V. BASTIAN, Jr.,
*Editor.*

[Encl.]

PAGE ELEMENTARY SCHOOL DEDICATION SUNDAY AFTERNOON—DR. JOHN J. DESMOND, JR., FORMER COMMISSIONER OF EDUCATION FOR MASSACHUSETTS, PRINCIPAL SPEAKER

AYER.—Local history was made Sunday afternoon with the formal dedication of the $800,000 Page School, the town's new 16-classroom structure accommodating elementary grade children from the community and from Fort Devens. Approximately 500 persons attended the exercises, the chairman for which was Frank C. Harmon.

SPEAKERS PRAISE FACULTY

Dr. John J. Desmond, Jr., former commissioner of education of the Commonwealth of Massachusetts, delivered the main

address. He described the school one of the finest and most modern in New England. Maj. Gen. Sidney C. Wooten, post commander at Fort Devens, brought the official greetings of the military establishment to the town.

Neil W. Ackland, regional representative, Office of Education, Department of Health, Education, and Welfare, joined with others on the program in congratulating the town for its new facility.

SUPERINTENDENT EXPRESSES APPRECIATION

Superintendent of Schools Harold G. Norton expressed the appreciation of the school department to the school building committee and everybody who was actively concerned with the construction and completion of the Page School. Superintendent Norton also reminded the citizens that serious consideration should be given for a new high school building to replace the present over-crowded structure.

The program was conducted by Chairman Harmon and he was assisted by the members of his committee. Mrs. Rena M. Hurley, principal of the school, and her teaching staff were introduced to the audience.

PAGE PORTRAIT PRESENTED

A highlight of the occasion was the presentation to the school by Ralph H. Richardson of a portrait of his grandfather, Alfred Page, in whose honor the school was named. "I am very grateful and very proud," Mr. Richardson declared, "that this building, the first school building erected by the town of Ayer since 1931 and the first one designed for exclusive use as an elementary school since 1873, almost 83 years ago, has been named in honor of my grandfather."

Alfred Page Richardson, another grandson of Alfred Page, was present at the dedication as an honored guest of the school department.

FLAGS DONATED

The Ayer Woman's Club, through its president, Mrs. Gerald Finnegan, presented the school with a new U.S. flag and a Commonwealth of Massachusetts flag for use on the stage. The Sisterhood of Congregation Anshey Sholom of Ayer, with its president, Mrs. Carl A. Black, as its representative, presented the school with a flag for use on the flagpole on the school grounds. School Committeeman Donald R. Griffin received the flags in behalf of the school department.

KEY TRANSFER CEREMONY

Participating in the ceremony of the transfer of the keys to the building were George W. Doyle, superintendent of construction Herbert H. Glassman, of Perley Gilbert Associates, the school's architects; Frank C. Harmon, chairman of the school building committee, and Paul K. McGuane, chairman of the school committee.

GUESTS INTRODUCED

Among those introduced to the gathering as guests of the school department on this occasion were Hon. Lyman K. Clark, judge of the Ayer district court; Arthur W. Cryan and Edmund E. McMahan, of Perley Gilbert Associates, the school architects; Joseph Kaplan, donor of the Kaplan teaching scholarship in the Ayer school system; Joseph M. Markham, the town of Ayer's "elder statesman"; the Reverend Hugh Penney, of the Ayer Federated Church; and Hon. Chester H. Waterous, area representative to the general court.

The Reverend Daniel F. Dunn, of St. Mary's Parish of Ayer, delivered the invocation; and the Reverend Henry Mattocks, of St. Andrew's Episcopal Church of Ayer, gave the benediction.

Music was furnished by the Ayer High School ensemble and there were selections by the a cappella choir.

Souvenir brochures on the historic school dedication were distributed to those attending the event.

Following the dedication program held in the school auditorium, there was an inspection of the building, with committee members assisting in a tour of the school.

Refreshments were enjoyed in the gymnasium.

## Lynn, Mass., Deanery, Archdiocesan Council of Catholic Men Opposed to Recognition and Admission of Red China to the United Nations

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include resolutions adopted by the Lynn, Mass., deanery, Archdiocesan Council of Catholic Men submitted to me by Cornelius F. Burke, president of the Lynn deanery:

ARCHDIOCESAN COUNCILS OF CATHOLIC MEN AND WOMEN,
LYNN DEANERY,
*March 18, 1959.*

Congressman THOMAS J. LANE,
*House Office Building,*
*Washington, D.C.*

MY DEAR CONGRESSMAN LANE: At the recent quarterly meeting of the Lynn deanery of the Archdiocesan Council of Catholic Men the attached resolutions were unanimously approved:

1. Against recognition of Red China by the United States and against its admission to the United Nations.

2. The imposition of penalties against the U.S.S.R. for its defiance of the resolutions of the United Nations.

The deanery represents the 29 parishes in Lynn, Everett, Malden, Melrose, Revere, Saugus, Nahant, and Minthrop, Mass.

Your interest in this matter will be appreciated.

Very truly yours,

CORNELIUS F. BURKE,
*President, Lynn Deanery.*

The Lynn deanery, Archdiocesan Council of Catholic Men, notes with regret that favorable policies and opinions have been expressed by certain individuals and groups relative to recognition of Red China by the United States and the admission of Red China to the United Nation: Therefore be it

*Resolved*, That the Lynn deanery opposes such recognition and admission of Red China either directly or by subterfuge, and petitions the present Congress of the United States to reaffirm the joint resolution of the 84th Congress because (1) the passage of time has shown that by its action and policies Red China is opposed to the principles of the Federal Government and of the United Nations; and (2) war, religious or secular persecution, in violation of human rights, are not acceptable credentials for recognition by the United States or the United Nations; be it further

*Resolved*, That a copy of these resolutions be forwarded to Congressmen WILLIAM H. BATES, TORBERT H. MACDONALD, and THOMAS J. LANE, and Senators JOHN F. KENNEDY and LEVERETT SALTONSTALL.

The Lynn deanery, Archdiocesan Council of Catholic Men, alleges that the military forces of the Union of Soviet Socialist Republics have thrust the present governmental officials on the Hungarian people.

The United Nations General Assembly by resolution has declared Hungary to be deprived of its liberty and political independence and the people of their human rights through armed intervention of the U.S.S.R.

There is no true freedom of religion and in its place the Hungarian puppet Government has adopted a policy of terroristic suppression and persecution and any procrastination by the General Assembly might cause world opinion to turn against the United Nations due to continued defiance by Hungary and the U.S.S.R. of many United Nations resolutions calling for withdrawal of Soviet military force and the stoppage of persecution of the Hungarian people: Therefore be it

*Resolved*, That the Lynn deanery asks the Congress of the United States to instruct its representatives at the United Nations to advocate the imposition of penalties against the U.S.S.R. for this defiance of the resolutions of the United Nations; and be it further

*Resolved*, That a copy of these resolutions be sent to Senators JOHN F. KENNEDY and LEVERETT SALTONSTALL, and Congressmen WILLIAM H. BATES, TORBERT H. MACDONALD, and THOMAS J. LANE.

## Town of Glenville, N.Y., Opposes Action of TVA in Awarding Turbine Contract Abroad

EXTENSION OF REMARKS
OF
### HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks, I include a letter I have received from the Town Board of the Town of Glenville, N.Y., expressing their firm opposition to the recent action of the TVA in awarding a contract for a 500,000 kilowatt steam turbine generator to a foreign firm, in spite of the heavy unemployment that exists in the area of the Schenectady plant of the General Electric Co., and the hazards to national security such action creates.

The letter follows:

TOWN OF GLENVILLE,
*Scotia, N.Y., March 20, 1959.*

Hon. SAMUEL S. STRATTON,
*House of Representatives,*
*Washington, D.C.*

DEAR CONGRESSMAN STRATTON: You no doubt are aware that the Schenectady General Electric Co. has just lost an order for a 500,000-kilowatt steam turbine-generator to Parsons, Ltd., of England, as a result of a regrettable decision of the Tennessee Valley Authority.

When a Federal agency such as the TVA decides to take the money we pay in taxes to purchase a machine outside the United States, it can only mean one thing: The taxes Americans pay are being used to put other Americans out of work. This order would have made possible work for approximately 640 men for 1 year. Much of the wages paid

these 640 men would go back into this community to help alleviate the depressed economic condition existing here at this time.

Further, the TVA power system is one of the largest in the world and, therefore, one of the most critical in time of emergency. In going outside the country to make this purchase, the TVA is gambling that a foreign power can adequately service this machine in time of emergency.

Therefore, as representatives of the town of Glenville, we ask you to do everything in your power to see that this decision is revoked and that this order be given to the lowest domestic bidder.

Very truly yours,

TOWN BOARD, TOWN OF GLENVILLE,
By ROBERT HOOD, *Town Clerk.*

## Our Liberties Versus Responsibilities in a Free Society

EXTENSION OF REMARKS
OF
### HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. BETTS. Mr. Speaker, each year the American Legion of Ohio conducts an essay contest among the high school seniors in the State on some phase of Americanism. Twelve winners are selected and rewarded by a trip to Washington, D.C. This year one of the winners was Michael Fout, a senior at Kenton High School in the district I represent. If his essay represents the thinking of our youth, we have nothing to fear for the future of our country. I recommend it to all of us who are too prone to take for granted the things that go with American citizenship:

OUR LIBERTIES VERSUS RESPONSIBILITIES IN A FREE SOCIETY

How well we Americans remember the story of the gaining of our independence: In 1776 our ancestors declared themselves free from their mother country, England, and for the next 8 years, proved that they were willing to fight for national liberty. In 1783, they not only secured our valuable heritage but also the responsibilities of running our country democratically and protecting its citizens. Accompanying this national liberty was individual liberty, which every citizen was entitled to.

However, as completely unrestricted freedom of action quickly leads to anarchy and makes justice and social existence itself impossible, it can be assumed that restraints on the freedom of action by individuals, for the good of the other members of society and of society as a whole, are necessary and inevitable. Thus, individual liberty is the right of a person to act without restraint as long as his actions do not interfere with the equivalent right of others. Any violation of this responsibility toward others is not characterized as liberty, but is stigmatized as license, and abuse of freedom. Such are the civil and criminal offenses in which miscreants who, disregarding their responsibility to society, willfully commit. Lefty Barnes, who is serving time for the bank holdup a year ago, or Uncle Bill, who couldn't rear his children properly, have both shirked their responsibilities.

Because they do carry with them responsibilities, our liberties make us think for ourselves and build our character. In World War II, there was a great difference between the Japanese soldier and the American soldier. The Japanese were good followers since they didn't do a thing without an order. But in open battle, they couldn't be responsible and judge for themselves. They lacked initiative.

Thomas Jefferson was a firm believer in revolution so that the Government doesn't become stagnant but that it progresses. Progress in a country can be brought on only by the initiative of the people. This initiative can be aroused only when the people possess their God-given rights.

In America, we are proud to say that our Government is based on the right and worth of the individual. We enjoy the freedoms of worship, speech, press, and assembly. But we also have the responsibility of controlling them and using them properly. When an assembly of farmers congregate peaceably, they are enjoying their rights as American citizens. But when Cousin Willis starts a riot among them by speaking unrationally, he, as well as the members of the riot, is violating his responsibility to society.

As citizens in a democratic society, we have the responsibility of paying taxes. We also possess the right to vote, accompanied by the responsibility of voting. And, of course, we must defend our country and guard our liberties.

Since our rights are for the good of the individual, the most important responsibility is to ourselves—to live good Christian lives morally, physically, and mentally. In that way, we are strengthening our liberties so that no one can take them from us. After all, a free man, according to Aristotle, is one who has mastered his passions; tempered his judgment; will either doubt or believe on the basis of evidence only; will neither seek nor shun danger; and in all his relationships exhibits temperance and poise.

Remember, "we are endowed by our Creator with certain inalienable rights"—and accompanying these rights are certain responsibilities.

## Byelorussian Independence Day

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. MULTER. Mr. Speaker, the Byelorussians are one of the lesser known Slavic peoples.

This is partly because they have been intermingled with more numerous and powerful other Slavic peoples, and partly because they have been subjected to the oppressive rule of others. For centuries Russians have done all in their power to assimilate them, and have tried to represent them to the world as Russians. But history shows that the Byelorussians—the White Russians, or Ruthenians, as they are sometimes called—formed a distinct national group in their homeland, east of Poland and west of Moscow, long before the formation of the modern Russian State. Since that event, early in modern times, Byelorussia became part of the Russian Empire.

Czarist Russian rule did not eliminate the Byelorussians as an ethnic group. The more they were oppressed by their Russian masters, the more Byelorussians clung to their ethnic and national ideals, and longed for the day of their independence. This came about in 1918, when the Czarist regime was overthrown. On March 25 of that year the Byelorussian National Republic was proclaimed, with its capital in the historic city of Minsk. Soon it was recognized by the governments of many countries, and it looked as if the new state was to attain sovereignty in historic Byelorussia. Unfortunately the independence thus proclaimed did not last long. Russian Communists attacked and overran it, and in March 1921, Byelorussian independence vanished. Since then some 10 million Byelorussians are living under the oppressive Soviet regime. But they have not abandoned their ultimate goal for freedom and independence. There in their homeland, while working hard under the unfree and almost inhuman Soviet system, they ardently look to the day of their liberation and freedom.

On this 41st anniversary of their independence day, let us all hope for the freedom of Byelorussia and its liberty-loving people.

## Memorial Tribute to 2d Lt. Kenneth G. Fauteck

EXTENSION OF REMARKS
OF
### HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. HALPERN. Mr. Speaker, Monday's newspapers announced the finding in Spokane, Wash., after a 16-day search, of the body of little 9-year-old Candice Elaine Rogers who had disappeared as she was selling Camp Fire Girl mints near her home.

The Nation has been deeply horrified by the wanton brutality of this crime. It is the hope of all of us that the vicious murderer may soon be apprehended and brought before a court for trial.

Today, I want to say a few words, in both pride and sorrow, about another very tragic phase of the case, the heroic death of a young man who grew up in my congressional district, the Fourth District of New York.

Kenneth G. Fauteck, a second lieutenant in the Air Force, who was killed in a helicopter accident near Spokane, on March 7, was the eldest of the two sons of George and Marie Fauteck, of 216–18 117th Road, Cambria Heights, N.Y. He was pilot of an Air Force helicopter, and was, with four other crew members, engaged in a volunteer search up the Spokane River for the missing little girl, when the helicopter struck some high-tension wires of the Washington Water Power Co., and fell in wreckage into the Nine Mile Reservoir. Two others were killed with Kenneth: S. Sgt. William A. McDonnell, and A2c Marlice D. Ray. Two survived, with minor injuries: S. Sgt. James L. Fisher and A2c. Michael R. Holloway.

Kenneth Fauteck leaves a young bride, the former Eleanor Dengler of Ozone Park, N.Y., to mourn his loss and to take pride in the memory of his brave sacrifice. Otto Gumaelius, to whom I am grateful for sending me word of this sad event, well asks:

In a time of peace, what greater glory can a young man have than one who, while serving in the Armed Forces of the United States, unselfishly and heroically gives up his life so that a child might live?

Police Inspector Robert B. Piper, in whose search for the missing child Kenneth Fauteck and the others were assisting, said:

How do you thank men for such a noble gift? Their deaths are a great tragedy. I know the boys who died felt it was as necessary as anything in the world for them to do what they did.

The mayor and the City Counsel of Spokane have similarly expressed their gratitude and grief, personally and in the name of the city of Spokane. But it seems fitting also that there be a recognition of the sacrifice of Kenneth Fauteck in particular, here on the floor of the House, at once local, in that I represent his home district, and national, in that I am speaking before the House of Representatives of the United States.

Kenneth was but 22 years old, and had been married only a year this month. He had, after his marriage on March 2, 1958, been transferred in rapid succession from Mitchel Field to Georgia, to Texas, to California, and finally to Fairchild Air Force Base, Spokane, Wash. His quick intelligence and eager interest in flying had enabled him, without having completed high school, to earn his officer's commission. It seems sure that he had a great career, in service and achievement, before him—but no length of life could have earned him more gratitude and glory than his death in the performance of this brave act. As a symbol of the recognition Kenneth Fauteck has deserved from his country, I am sending to his family, in tribute to his memory, an American flag that has flown over the U.S. Capitol.

## Fair Trade Violates Both Political Parties and Congressional Oath

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, Republicans often praise the merits of the free enterprise system and stress principles of balanced budget, fiscal responsibility, price stability, sound money and freedom from price and wage controls. These are good and true principles, it seems to me.

Now comes the Fair Trade Act, H.R. 1253, to enforce by Federal law a retail stipulated price system permitting the manufacturer to set these prices. Well, it is price control, contrary to Republican principles. As to inflation and sound currency—well, fair trade items in a comprehensive Justice Department survey cost 27 percent more than in a nonfair trade area. This certainly cuts buying power. Price stability? That, too, is out the window. In short, fair trade fails the best of Republican principles.

Democrats constantly attempt to identify themselves with common people, the little man, the average consumer. Well, these price fixing laws are not in the interest of the consumer.

Democrats and Republicans share principles rooted in American tradition—that set us apart as a Nation from foreign ideologies—no matter the differences between parties. Members of Congress by oath subscribe to the balance of powers between the branches of Government and between Federal and State. This fair trade bill would be a Federal encroachment on State jurisdiction.

Fair trade is antithetical to the beliefs of both parties, and to both conservatives and liberals. When Members of Congress get the facts, the so-called fair trade bill will be discarded and discredited.

## Recognition of the Government of the Mainland of China

EXTENSION OF REMARKS
OF
### HON. GEORGE A. KASEM
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. KASEM. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial column concerning recognition of the government of the mainland of China. The column, entitled "It Seems to Me," was published in the January 22 issue of the Monterey Park Progress, Monterey Park, Calif., and was written by Mr. Eli Isenberg, publisher.

The article follows:

IT SEEMS TO ME
(By Eli Isenberg, publisher)

"Should the United States recognize the government of the mainland of China?"

This was the topic chosen by Harold Fiebelkorn and John Armetta; past presidents of the Lions, for discussion by that club on Tuesday.

Armetta and Fiebelkorn were in charge of the meeting and used the opportunity to discover whether service club members would enjoy and participate in a program of this type.

Their object was to stimulate discussion and exchange of thinking on a matter that is of great international importance. It was my privilege to serve as moderator.

In posing the question for group discussion, I spoke as follows:

I will refer to "the government of the mainland of China" to distinguish it from what is called the Republic of China on Formosa.

Since 1949, all of the mainland of China has been under the government of Mao Tse-tung. This is a Communist government. We do not accord it general diplomatic recognition because, in Mr. Dulles' words, "this would greatly increase its influence and prestige and correspondingly increase its ability to harm us."

Many of our Western allies including Great Britain and France have diplomatic relations with China; they have trade relations, and their newspapermen have access to this land mass and its 600 million people.

Most of what Americans know about Red China has been learned secondhand from these sources.

Among the questions that Lions may wish to discuss and attempt to resolve are these:

What is the traditional policy of the United States in respect to diplomatic recognition? Until recent years, and even today with few exceptions, the policy established in President Madison's day has been followed. The policy is this: If a government exists and is actually governing, it should be recognized.

This did and does not mean we approve of the Government or how it came to power. We followed this procedure in Iraq, recognizing within 1 week the new government which overthrew one which we had supported to the tune of $200 million a year. We have recognized the Castro government in Cuba.

Would diplomatic recognition of China lessen our prestige in the Far East and in the world? Or could it possibly increase it?

The heart of American foreign policy is to take such steps as would insure world peace. Would recognition of China contribute to this effort or not?

About 20 Lions participated in the discussion that followed.

Most of the men were of the opinion that China did exist, that it was unwise for the United States to pretend that Chiang Kai-shek represented the Chinese people. "We live in a small world," one Lion said. "As a Nation that believes in the principle that we should love our neighbors, certainly we should make the effort to understand these people and help them to understand us."

Those opposed to recognition cited our obligations to Chiang. They expressed fear that any friendliness toward China would aid that country in its economic and military growth.

Some Lions felt that economic and cultural exchange would help the cause of peace.

At the conclusion of the meeting, Lions were asked to vote by ballot as to whether they favored recognition of China. Majority by 21 to 8 did.

Lions also expressed hope that there would be future panels of this type, and most agreed, if they were held, to serve on a panel.

## Poison in Your Water—No. 48

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting in the Appendix of the CONGRESSIONAL RECORD an article appearing in the Port Chester, N.Y., Item, on March 8, 1959, entitled "Hudson River's Fishy Taste Told LWV Water Workshop":

HUDSON RIVER'S FISHY TASTE TOLD LWV WATER WORKSHOP

WHITE PLAINS.—Screening out dead fish is the first step in purifying the Hudson River water which Poughkeepsie drinks.

"It's clean when we finish the purification process but sometimes it tastes pretty strange," added the member of the League of Women Voters from Poughkeepsie Tuesday at the league's all day workshop on the State's water resources. "Villages above us still empty their sewage in the Hudson."

As outlined by Mrs. Gustave Keane of Huntington, State chairman for the water resources item on the State leagues' study agenda, and Mrs. Harleigh Wathen of Bronxville, the subject is one for study of watersheds, pollution and agencies.

But for a league member from Croton it was a subject of the continued garbage dump in Croton Point Park that seeps its evil smelling distilation into the Hudson. It was the subject of how to stop industry from taking over county parks on the Westchester bank of the Hudson.

In the latter subject, the county league directors have filed a protest with the board of supervisors. Many individual league members yesterday expressed their intention of writing letters of protest to local supervisors and the county park commission.

All speakers agreed that coordination of water programs in Westchester by local communities must be achieved if future water supplies are to be assured. Several spoke with feeling about the destruction of trees and land surfaces, causing drainage problems, by builders' bulldozers.

Much water pollution, it was charged is due to lack of enforcement of State laws, particularly along the Hudson.

Mrs. Wathen reported that New York City can be adequately served by the Delaware Aqueduct until the year 2000. By then, she said officials told her, drinking water can be siphoned off from the big reservoir of the Hudson River above Poughkeepsie, above the saline line of tidal water.

Attending the workshop in the county center were league members from Ramapo, Poughkeepsie, Middletown, New Platz, Hempstead, Port Washington, Roslyn, and Huntington.

## Battle Between Bigs Means Higher Prices

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, consumers pay lower prices for goods in a non-fair-trade area. Justice's Antitrust Department survey clearly establishes this fact—Bick's statement 1959, appendix 1. In eight non-fair-trade cities, 132 fair trade items sold for 27 percent below fair trade values. Retailers were making money and the consumers did not know how lucky they were to be in a non-fair-trade area. Those paying more did not know how unlucky they were to be in a fair trade area.

The moral is that wide profit margins—now being asked by Federal law—in a fair trade bill—H.R. 1253—are the very reasons that discount houses enter the scene.

We are told that this is a battle between big and little retailers—not so. It is a battle between bigs, and the Federal adoption of this fair trade bill will kill the little independent retailer, not the big stores. As Mr. Bicks pointed out:

It is more correct to say that the fair trade fracas is one between big retailers or price stores on the one hand, and big manufacturers or quality stores on the other, rather than one between big and little retailers * * * there are money and vested interest aplenty on both sides and the colorful drama somewhat overdrawn of the big foreign operator crushing the little local independent is a poetic legend more suitable for propaganda exploitation than the whole unvarnished reality.

Maybe the small retailers had better get wise to the dangers of fair trade while there is still time and beware of their own national leadership.

## Schools To Meet the Challenge

EXTENSION OF REMARKS
OF
### HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. BOWLES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on "Schools To Meet the Challenge," made before the Washington Ethical Society, March 17, 1959, by Dr. John B. Whitelaw, who is a former resident of my Second District in Connecticut and is presently Chief for Teacher Education, U.S. Office of Education. He has summarized in essence perhaps the greatest challenge of our time. We perpetually hear much about educational needs today from all quarters. But I doubt that the crux of the question has been posed with the vision and knowledge which this lifelong educator brings to it now. I trust that Dr. Whitelaw's timely remarks will help to stimulate a more realistic approach by all of us to this problem of worldwide significance.

May I say initially that so much has been said and written about education during the last 2 years—most of it highly combative in tone—that I hear and now dissociate myself from anyone or any organization, group, or agency that is seeking attention in this field. I hope that no one will attempt to label me as being in any particular camp—whether of President Conant, Robert M. Hutchins, the National Education Association (of which I am a life member), Admiral Rickover, Arthur Bestor, the Council for Basic Education, or Teachers College of Columbia University. Although I do subscribe in part to much that each of these individuals or organizations has said, I shall appreciate it if you can refrain from cataloging me as substantially agreeing with any of them.

Can we rather take the approach of trying to solve our educational problem by cooperation; by combining whatever good ideas we can glean from any source; and with the primary objective of working out the strategy for doing something about it? Let us avoid the current sport of developing sharp but meaningless hostilities on the basis of prejudice or inadequate information.

May I say also that rather than my making a series of dogmatic or flatfooted assertions I hope that we can make this meeting one of productive discussion about this problem which is of the highest importance to each one of us. I will therefore attempt to raise some basic questions so that we can get to the discussion of them, by all of us, as soon as possible.

WHAT IS THE CHALLENGE?

The challenge that our schools must be designed to meet? Let us consider four main aspects of the challenge:

1. The acceleration in the growth of knowledge about the universe and about man.

2. The military problem created by the application of nuclear energy to national defense.

3. The conduct of international diplomatic relations in the unremitting struggle to maintain peace.

4. The facts of international economics, especially:

a. The relative position of the United States in the markets of the world.

b. The aspirations of the underdeveloped countries and our relation to them.

These challenges have been dramatized for us by the rise of the Soviet Union and of China since World War II, and by the ferment now evident in the underdeveloped countries of the world.

To summarize the effect of all these challenges, which do impinge upon each other and are part of the total release of intellectual as well as nuclear power in the world today, may I simply focus our thought upon the situation in the Soviet Union. As you know, I had the great privilege of spending 30 days in the U.S.S.R. last May and June and of making a swing of 6,500 miles from the Baltic to Siberia; down to the foothills of the Himalayas near the border of China; then to the Caspian and Black Seas; northwest almost to the border of Poland; and back to Moscow. In taking a hard look at educational advances in the Soviet Union, we are confronted by what I like to refer to as six major challenges to education in the United States. These challenges are, I believe, good samples of what we are up against in recognizing the need to bring American education up to considerably higher standards than we have had in the past.

1. Their complete commitment to education as the way to the future for themselves as a society and as individuals.

2. Their insistence upon a rigorous basic education for all youth to the extent that each individual and the State can profit from it.

3. The challenge of a pioneer society to an affluent society—they appear to be a pioneer society, as in China; we are an affluent society.

4. They appear to know where they are going as a society and as individuals. Do we?

5. The challenge of collectivism to individualism. They believe in communism and collectivism as we believe in capitalism and individualism.

6. They are apparently subsidizing brainpower without limit, especially as their best brains are applied to basic research.

The Soviet Union is a union of 15 republics with a total population of approximately 200 million.

Over the fence is China with a population of approximately 700 million now going through the agony of rapid modernization through communism, and with a tradition of over 3,000 years of higher education.

In the international field we find aggressive policies being carried out by both the Soviet Union and China. It is my very acute concern that by 1984 we may find the two dominant Communist nations holding most of the mortgage notes on most of the underdeveloped countries of southeast Asia and of Africa.

And we are now sharply aware of the problems involved in attempting to organize the free nations of the world to fill the tremendous power vacuum created by the decline of colonialism.

AMERICAN EDUCATION TO MEET THE CHALLENGE

It seems to me that the nuclear age has imposed educational requirements upon each

American child which are more rigorous than any cultural strictures that have been experienced in the history of the United States. Today, more than ever, knowledge is power: power to live effectively as individuals; power to survive as a nation.

There are great strengths in American education due to the vision, courage, and intelligence of our forbears. We honor them and are thankful for their ability to establish in an evolutionary fashion the principles of equality of opportunity especially with reference to education. For the extent of American education—elementary, secondary, and higher—we salute those who have preceded us. The battle for free schools was not easy. It was tough.

And now, the battle for good schools will not be easy. It will be tough. And many a head will be bloodied and many a reputation will be vilified in the struggle to bring the quality of American education up to the levels required by our times.

Because of the extraordinary developments in the scientific, military, and diplomatic spheres of life, which are having their revolutionary effects upon the everyday life of each one of us, schools to meet the immediate and long-term challenges of the nuclear age must, I believe:

1. Require American boys and girls to work just about twice as hard as most of them do today—at levels and at a pace more comparable to educational standards in the other high level cultures and in the modern pioneer societies around the world.

2. Require boys and girls of normal intelligence to master the basic tools of cultural understanding and competence—that is, to complete a rigorous general education—by the end of the secondary school (12 years of schooling, 6 years of elementary school and 6 years of secondary school).

3. Require secondary school graduates to have reasonably clear vocational objectives before continuing education beyond high school.

These, it seems to me, are the three basic requisites. The overall need is to strengthen education at all levels—elementary, secondary, and higher. To increase the intensity of application will naturally mean stripping off some of the nonessentials.

However, our most serious educational problem today is including not with children, teachers, or schools per se; it is with the average citizen, you and me. How can we overcome the ignorant complacency, the flabby quality of social thinking, and the blind selfishness of the men and women who by their opinions and their votes determine American educational policy. Nothing is accomplished by picking on underpaid educators, understaffed schools, and aimless children. The heart of the problem is with the average citizen, the average voter, the masses of thinking people who are and who make our culture.

How can the average citizen be made to understand the real and pervading nature of the challenges of the nuclear age to our way of life and to our schools?

When will the average citizen demand and be willing to pay for the quality of education required if we are to survive and prosper in the nuclear age?

## DAV Services in Massachusetts

EXTENSION OF REMARKS

OF

### HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. BURKE of Massachusetts. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Massachusetts citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Massachusetts, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran very substantially. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger; its national director of claims, Cicero F. Hogan; and its national director of employment relations, John W. Burris—all located at its National Service Headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV National Headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV maintains five national service officers in Massachusetts, located in the VA Regional Office at 1 Beacon Street, Boston, Mass., as follows: Eugene F. Reilly, James J. Sayre, Louis Spencer, Paul J. Sullivan, and Thomas J. Tomao. The DAV department commander is Leo W. Lalley and the department adjutant is Joseph R. Harold, who also serves as executive service assistant to the national commander, Judge David B. Williams, of Concorn, Mass., all of whom are my personal friends.

The DAV Department of Massachusetts has nationally appointed representatives to the Veterans' Administration Voluntary Services Advisory Committees at each of the Veterans' Administration hospitals servicing Massachusetts veterans. These DAV representatives and the hospitals are as follows: Bedford VA Hospital, E. Elmer Baldwin, representative; Boston VA Hospital, George J. Lynch, representative; Brockton VA Hospital, George K. Inglis, representative; Boston regional office, Framington VA Hospital, Robert F. Irino, representative; Northampton VA Hospital, Earl A. Gour, representative; Rutland Heights VA Hospital, Alonzo Scott, representative; and West Roxbury VA Hospital, Harry E. Guerriero, representative.

During the last fiscal year, the VA paid out $199,218,000 for its veterans' program in Massachusetts, including $71,227,789 disability compensation to its 93,730 service-disabled veterans. These Federal expenditures in Massachusetts furnish substantial purchasing power in all communities. Only about 13 percent—12,420—are members of the 91 DAV chapters in Massachusetts.

This 13-percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Massachusetts veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

| | |
|---|---|
| Claimants contacted (estimate) | 260,603 |
| Claim folders reviewed | 217,169 |
| Appearances before rating boards | 65,078 |
| Compensation increases obtained | 10,194 |
| Service connections obtained | 5,013 |
| Nonservice pensions | 1,349 |
| Death benefits obtained | 180 |
| Total monetary benefits obtained | $4,899,389.07 |

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Massachusetts veterans, their dependents, and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment (to utilize their remaining abilities), civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—

not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 4.5 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Massachusetts, with a consequent loss of about $1,260,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Massachusetts to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 28,272 of whom, during the last 8 years, were Massachusetts residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV service foundation is therefore very much in need of the generous support of all serviced claimants, DAV members, and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV Chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member—an excellent precedent for Massachusetts.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Massachusetts by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

---

## A Fair Trade Law Is Not Necessary

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, the Federal Trade Commission Act, section 5, states, "That unfair methods of competition are hereby declared unlawful."

More precisely the Robinson-Patman Act, section 3, states:

> It shall be unlawful for any person engaged in commerce * * * to sell, or contract to sell goods at unreasonably low prices for the purpose of destroying competition or eliminating a competitor.

State laws are also directed at so-called loss leader or unfair practices. So what the proponents of fair trade dislike, they already have protection against. Further, why have fair trade proponents shied away from loss leader bills in times past when they were introduced to meet the problem of predatory pricing?

The basic answers to fair trade are not being sought or found by a study of H.R. 1253. What is needed is an objective statistical study of these questions: First, are not small businesses flourishing in areas where there is no fair trade protection? Second, in States where fair trade laws have been invalidated, have small businesses disappeared? Third, prior to the passage of any of the fair trade laws were there no small businesses in the United States? Fourth, are there no small businesses that sell furniture and major appliances, items which the manufacturers have rarely fair traded?

Such a study should precede a fair trade bill. Meanwhile the consumers are way ahead of those Congressmen who think resale price maintenance is good for buyers.

Perhaps the more immediate problem concerns the Justice Department survey which shows a 27 percent lower price in non-fair-trade areas for 119 items compared to fair trade areas. How could a Member of Congress vote for fair trade and higher prices, leaving the posed questions unanswered, and then face constituent consumers?

## Federal Communications Commission Has Carried Equal Time Requirement Too Far

EXTENSION OF REMARKS
OF
### HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. BRAY. Mr. Speaker, the recent FCC decision concerning the requirement for stations to give equal time to opposing candidates even on newscasts could result in a virtual blackout of political news on radio and television. This is an absurd extension of the "equal time" principle, and I believe we should seek a legislative remedy without delay.

Of interest on this subject is the editorial from the March 23 issue of the Indianapolis News:

THIS IS OUR BUSINESS

This newspaper feels that the spirit, if not the letter, of the first amendment to the Constitution is grossly violated when the Federal Communications Commission requires that equal time be given to political candidates on newscasts by radio and television stations.

The first amendment guarantees, among other things, a free press. True, it has been honored much too often in the breach by Congress, the courts, and administrative units of Government. But that is another story.

The FCC ruling involves media of communication which could not possibly have been mentioned in the first amendment inasmuch as they were not then in existence.

Moreover, there are technical limitations on broadcasting—chiefly the need to avoid collision of wavelengths—which do not affect the dissemination of the printed word.

However, the Constitution always has been generously interpreted on the side of freedom in dealing with such innovations as radio and TV.

We believe that the constitutional concept of a free press also includes free radio and TV—again, within the technical limitations peculiar to those media.

President Eisenhower has done right to denounce the FCC ruling—which involves the Chicago mayoralty race—as ridiculous and to direct the Justice Department to study the legal aspects of the case.

In fact, this matter should be pushed even beyond that.

The Federal law specifying that all candidates for political office must be given equal time for their speeches in a campaign should be repealed.

There is no more justice in such a law than there would be in a law requiring that each candidate for office be allocated an equal amount of campaign money—or that each be as handsome or pretty or eloquent as the other.

The Government has no business—by the terms of the very first of the amendments to this Nation's basic document—to be eternally sticking its nose into the precise manner in which private media of public information and entertainment express themselves.

Newspapers are commercial competitors of radio and television stations. But they all are in the same boat when it comes to upholding the basic right of free men to express themselves as they see fit within the bounds of common decency, laws of libel and slander, and adherence to the constitutional injunction against treason.

## Statement on Behalf of the Equal Pricing Bill, H.R. 2729

EXTENSION OF REMARKS
OF
### HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a statement by Mr. George J. Burger, vice president of the National Federation of Independent Business, which was made before the House Interstate and Foreign Commerce Committee on behalf of my bill, H.R. 2729. I feel that all Members concerned over the plight of our small businessmen will be interested in the following statement:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, BEFORE HOUSE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, MARCH 18, 1959

I am George J. Burger, vice president and Washington representative of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

First of all, Mr. Chairman, I want to thank you and your committee for inviting me to appear and give testimony on the subject matter before your committee.

Mr. Chairman, the committee is to be complimented on giving early consideration to this major piece of legislation embodied in H.R. 2729, properly termed the "equal pricing" bill, and let it be understood by the committee that this is not a price-fixing piece of legislation, nor will the public be hijacked through increased prices if the Congress should vote this legislation.

It is necessary for the committee to have some background as to the early operations of manufacturers going into the retail field through their own retail stores.

In my private business capacity, then owning and operating an independent establishment, in the early twenties, it will be found from that record that in some degree the foundation for manufacturers' retail stores was instituted by a leading paint manufacturer. Their action received considerable attention by leading members of the stock exchange.

The pattern of the operation of this leading paint company was noted by some others in major industries, for example (1) certain leading rubber tire manufacturers, and their defense in establishing these retail stores in competition with their own independent retailers was on the them that they were opening these stores as experimental stations to show their independents how to succeed as independent retailers in that industry. This all took place in or around 1925, and from that time on a continual expansion has taken place in many concentrated industries—all tending to reduce the position of efficient independent retailers in the respective industries.

Understand Mr. Chairman, and members of the committee, the witness has closely scrutinized the development of this trend in the retail field for better than a quarter of a century, and if some positive action is not taken by the Congress it can only end up in certain major industries controlling the production and distribution of important commodities—resulting in the reduction of efficient independents and, finally, John Q. Public being the victim.

I think it is necessary and most important, as a help to the committee, to lay the facts on the line, and we mean the facts, so that the committee can come to only one conclusion—that this type of legislation is sound legislation, constructive legislation to protect the free enterprise system if the free enterprise system is to remain within our economy.

In the consideration of this legislation I think it is most necessary that the committee consider what this legislative relief would do to protect the employment situation as it was reported in the press January 7 this year: "Nearly two-thirds of the total U.S. employment is provided by Nation's 4 million small businesses." Reduce this number of independent business establishments and it will result in adding more numbers to relief rolls in the various States.

The committee might ask, and rightfully so: "What's happening to the present laws on the statute books to bring the necessary relief through the law?" We answer that there is no relief through the present law.

Let me qualify this. We had extensive conferences with the heads of the antitrust agencies in December of 1958—most important conferences, and as to the problem of manufacturers owning and operating retail stores in competition with their own independent retailers, we found that no relief could be forthcoming.

Prior to these conferences the National Federation of Independent Business, a truly sincere representative for small business of this Nation—and whether they be members of the federation or not doesn't matter—and whose whole action is in behalf of small business, early in 1959, due to the constant communications over the past few years from our nationwide membership, made up exclusively of independent business and professional men—all voting members, not groups, which membership actually totals approximately 120,000, saw fit to poll our members on the subject of "equal pricing."

So that the federation will remain wholly neutral in presenting a proposition to the members the arguments for and against are presented. I am referring to the official publication of the federation—the Mandate, and at this point I would like to have the privilege of having this inserted as part of my testimony.

It is interesting to note the results of the poll, and this was prior to the time that

Congressman BENTLEY introduced the bill, H.R. 2729. This affirmative vote coming from the grassroots—your constitutents—makes it self-evident of the need for Congress to act immediately on this legislation. The result of the poll showed 82 percent for, 14 percent against, and 4 percent no vote.

The committee might rightfully inquire: "Now, how serious is this threat of leading manufacturers going into the retail field"? Receiving this question, here are the facts that speak for themselves.

In the rubber-tire industry the reports are that approximately 2,000 company-owned retail stores are operated by leading tire producers in metropolitan markets. It is to be noted that these 2,000 stores have 1 advantage, and a very important advantage as it relates to the excise-tax levy, and these company-owned stores have enjoyed this privilege for 18 years. This in itself is not a subject for your committee, and we are hoping sooner or later to have this corrected through the proper congressional committees.

In the gasoline servicing field it will be found that most major companies own and operate retail establishments. A complete exposé was made of this operation and what that action meant to the independent trade in the State of Montana by a State commission in Montana.

The hearings before the House and Senate Small Business Committees over the many years will disclose what these retail operations mean as it affects the independent retail establishments in that major industry.

In the retail shoe industry, as to the actual number of stores owned and operated by major shoe producers, at this moment I do not have the estimated number but we have noted in a recent announcement in the Wall Street Journal, February 6, 1959, that the General Shoe Co. proposes to open about 50 retail stores in the low-price women's shoe field, and, of course, it goes without saying that what this company does, others will follow.

A spokesman for that group, from Laredo, Tex., made an address at Temple University Shoe Retailing School under date of February 15. He said, "Most of our problems, monopolywise, stem from producers (through one means or another) going into competition with their customers. With the ax they have, we don't have a chance."

In the glass industry an independent member of that industry advised us under date of October 15, 1956, that the Pittsburgh Plate Glass Co. expected to embark on a new sales policy, opening up approximately 600 installation stores, nationwide. We checked with officials of the Pittsburgh Plate Glass Co. shortly thereafter and their answer to us was very vague as to the charge relating to the expected new program.

We do know that in a recent communication directed by Mr. Samuel Williams, acting officially for the glass dealers in his area, under date of March 2, 1959, to Senator RUSSELL LONG, chairman, Subcommittee on Monopoly of the Senate Small Business Committee, in rebuttal to the testimony given before that committee by a representative of the Pittsburgh Plate Glass Co., Mr. Williams concluded his rebuttal statement by saying: "The issue in question is the legality and morality of dual distribution. I still maintain that if Pittsburgh Plate Glass is not restrained and continues to open retail shops, we, the glass dealers, will not be in a position to compete with them. Legislation is urgently needed."

I also do know that, by invitation, during the summer of 1958, I was asked to address a group of spokesmen for that industry from the New England States at New Haven, Conn. The specific problem before that group was the inroads of the glass industry opening up retail stores.

In regard to plumbers supplies we understand that industry is now entering into an unfair competitive condition with independents in that industry.

Here is more recent action—current—as to the planning of certain leaders in certain major industries. I am referring to committee print "Problems of American Small Business," hearings before the Special Committe To Study and Survey Problems of Small Business Enterprises, U.S. Senate, 78th Congress, 1st session, pursuant to Senate Resolution 66, dated April 5, 7, and 8, and May 6 and 13, 1943. I am referring to the testimony of Mr. Howard Hawkes, assistant general manager, tire division, U.S. Rubber Co.:

"Senator ELLENDER. Does your company have so-called company-owned stores to distribute your merchandise?

"Mr. HAWKES. We do not, Senator.

"Senator ELLENDER. Do you contemplate maintaining that same position in the future?

"Mr. HAWKES. To the best of my knowledge, yes; and I am making such recommendations to my company.

"Senator ELLENDER. I imagine that since your company has been handling its manufactured product in that way it does not believe in having the so-called company-owned stores.

"Mr. HAWKES. We had some and we discontinued them. It was our judgment that we would be better off distributing through the independent dealers, and that represented the best method of distribution for us."

On March 4, 1959, the chairman of the United States Rubber Co., Mr. H. E. Humphreys, Jr., speaking before the New York Society of Security Analysis, said, and I quote in part: "The company has embarked on a broad and continuing program to increase the number of effective outlets for the distribution of replacement tires. It will continue to rely on the independent tire dealer for the bulk of its distribution, but in areas where tire outlets are needed and strong dealers cannot be found, the company is beginning to open its own retail stores."

Being well acquainted with that industry for 50 years I know and can state definitely that this is just another alibi upon the part of the big producer to unload his products irrespective of who is injured. This was the same theme song that was used by certain other large factors in that industry as early as 1925 in experimental stations, etc. I might say that from my experience in that industry I know of no industry that offers a more exceptionally bright future for independents to enter providing there was fair competition existing within that industry, a live and let live policy.

Mr. Chairman, the federation membership has voted in the affirmative on the overall proposition as outlined in the above bill. However, to keep the record straight—at the present moment the nationwide federation membership is being polled on the bill. I cannot say what the result of the poll will disclose. The federation's policy has been and will be to act on majority vote of our members, and I am sure that before the hearings are completed I will be able to supply the committee with the result of the nationwide poll, and unless I miss my guess the federation will in all probability be committed to the Bentley bill, H.R. 2729, as they now are committed to the basic principles involved in the bill.

At this point I would like to have included in the record of the hearings the current mandate, No. 246, presenting the pro and con on the Bentley bill.

In conclusion, the minute the poll is completed I will advise the committee the results of the poll and would like to have this added to the record of the hearings.

Thank you Mr. Chairman and members of the committee for giving me this privilege to appear, and again I repeat, our interest and our sole interest, is to protect the business life of independent business nationwide. We have no other objective. We serve only one master—small business.

---

## Greek Independence Day

EXTENSION OF REMARKS
OF
## HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. MULTER. Mr. Speaker, 138 years ago the national flag of Greece was unfurled to ignite the great revolution against foreign rule. Today the Greek people take rightful pride in celebrating this historic day, March 25, 1821, which heralded the beginning of the end of the suppression of the Green Nation by the despotism of the Ottoman Empire.

Freedom-loving people throughout the world have drawn inspiration from the long, hard, valiant, and epic struggle of the Greek people for independence. Greek Independence Day has immortalized the bravery and devotion of this proud nation's warriors and martyrs. On this stirring occasion the free world is once again reminded that "eternal vigilance is the price of liberty."

The spirit of Greece's passion of independence was strikingly captured by Lord Byron when, on the eve of the War of Independence, he wrote:

The isles of Greece. The isles of Greece.
* * * * *
The mountains look on Marathon,
And Marathon looks on the sea;
And musing there an hour alone,
I dreamed that Greece might still be free;
For standing on the Persians' grave,
I could not deem myself a slave.

Ancient Greece was the cradle of liberty. Apostles of freedom still look to Greece, both ancient and modern. For it was there that the Western concepts of representative government and the rule of law were mothered, and it was in classical Greece that political theories antagonistic to tyranny first were born, later to mature and inspire the great democratic movements of modern civilization.

Today Greece, precariously situated on the border of the Soviet empire, is a compelling example of the perseverance and sacrifice necessary to defend democracy against the dynamic threat of Communist aggression. Greece is now economically poor. Nevertheless, it manages to spend 5 percent of its gross national product on its military establishment. Assistance from the outside is essential to assure Greece a stable economic system and a viable future amidst the distresses of the cold war. The United States and its allies are now providing this help, a token of the great debt which their civilization owes to Greece.

After World War II, when strong pressure was applied by the Soviet Union and subversion by the Communists had engulfed the country in civil war, the United States came to the aid of Greece. As a result of assistance from this country, the wartorn economy of Greece was reconstructed and the Communist insurrection was suppressed.

The continuing freedom and security of Greece is of great importance to the free world. At the same time, the security of Greece as a free nation contiguous to the Soviet bloc is vitally dependent on the strength of the Western alliance. Since 1950, Greece has been associated with the North Atlantic Treaty Organization in planning for the defense of the Mediterranean. Greece's land, sea, and air forces are now linked with the combined NATO command for southeastern Europe and have participated in the joint exercises for developing a coordinated defense program for the eastern Mediterranean. The armed services of Greece are supplied with modern arms and equipment under the NATO programs.

In this way, Greece has undertaken to assume its responsibility for the defense of the Balkans and the eastern Mediterranean. Consequently, the area bridging Europe is more secure and the southern flank of NATO is more strongly fortified.

On this anniversary, the United States salutes the Greek people for their monumental contributions, past and present, to our country and to our civilization. Throughout the land, there are over one-half million Americans of Hellenic background. Our country is a much improved place because the patriotic and resourceful Greek people have contributed their magnificent heritage toward building a greater America.

## Present Legal Price Maintenance Practices

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, fair trade H.R. 1253 would permit a manufacturer to set prices at the retail level, and for this new right he makes no concession.

Fair trade proponents state that fair trade laws should be permissible since there are other forms of price maintenance which are legal.

Well, let us look at these other forms. They include, first, consignment selling; second, selling through manufacturer-owned retail stores; third, granting of franchises; fourth, selling direct from manufacturer to retailers who will abide by the manufacturer's suggested retail price; fifth, selling direct from manufacturer to consumer; sixth, having your own private brands made up.

Now, analyze each; the manufacturer in each has assured additional marketing responsibilities and risks in order to be able to maintain his price.

Not so in the fair trade bill, which for the manufacturer is "have your cake and eat it too"—that is, until the inevitable consequences of replacing free enterprise with price control by Federal mandate catch up with the industry—then manufacturers will wish for the good old days.

## Poison in Your Water—No. 49

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting in the Appendix of the RECORD an article appearing in the Albany, N.Y. Knickerbocker News, on February 12, 1959, entitled "Pollution Control Seen Vital to Water Supplies":

POLLUTION CONTROL SEEN VITAL TO WATER SUPPLIES

(By John W. Johnson)

My selection of New York State's primary need in public works would be stronger pollution abatement and control. An inadequate supply of potable water may eventually stifle growth of many of today's most populous areas.

While the problem is not as evident here as it is in many other States, because we are blessed with such an abundance of this great natural resource, however, the ever-increasing consumption, whether by a static population or one that is exploding, will so greatly tax the supply and disposal sources that serious trouble lies ahead.

Of course what is needed is money. Thirteen years ago all major communities in the United States could have constructed adequate treatment facilities for the sum of $350 million. I remember that this report came out at the time that Congress approved the Marshall plan payment for aid to Europe for that year in the same amount.

Today the problem is greater and the cost to rectify it very much higher because so many areas must find additional sources of water and consequently provide facilities for its treatment and eventual disposal.

Federal, State and local governments have for many years been cognizant of this problem. This is evident by the great amount of pertinent legislation that has been enacted and the great sums of public task is far from finished and much of the good can be undone unless greater efforts are forthcoming.

Here is our State, some communities are still poisoning their own water supplies. The State water pollution control board after laborious inspections, studies and hearings, requires that this pollution be stopped by ordering the construction of suitable works. Time after time communities so affected have been unable to raise funds for construction purposes.

The State will grant funds for planning only, and has therefore delayed and resorted to legal blockades which have hurt the whole program. In other instances communities downstream will delay the project until their neighbors upstream have completed theirs.

The design, planning and construction of the needed works will take a long time and require a great deal of money. However, there is no time to lose.

## The Berlin Crisis

EXTENSION OF REMARKS
OF
### HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ADAIR. Mr. Speaker, in his "Good Evening" column in the Fort Wayne (Ind.) News-Sentinel, Mr. Clifford B. Ward deals with the recent address of the President of the United States on the question of the Berlin crisis. Since Mr. Ward's views seem to me to be very sound and in keeping with the best traditions of our Nation and worthy of a wide reading, I include them herewith under leave to extend my remarks:

GOOD EVENING

(By Clifford B. Ward)

It was pretty difficult to escape a feeling of pride in the moral stature of the President of the United States as he outlined the policy of this country with respect to West Berlin.

It was a historic address, delivered with a skill that was unusual for Mr. Eisenhower. It was delivered with a calm, courageous determination that reflected his firsthand experience in the past with situations threatening death and disaster. You had the impression that here was a man who may fret about minor things, but who in times of really rough going would be a very steady anchor for all around him.

Mr. Eisenhower told the whole world that this country will not budge one single inch in its attitude toward Berlin. If the Soviet think otherwise, it will not be that they haven't been told.

MORAL POSITION ADOPTED

And the reason for our stand on West Berlin is simply that we don't intend to abandon more than 2 million free people in West Berlin to the tyranny of communism. It must strike atheistic Communists as ironic that a nation which warred on the German people, which decreed unconditional surrender for the Germans, is now willing to risk annihilation in an all-out nuclear war to save 2 million Germans from communism. We are saying that we will lay down our lives, if necessary, not for old friends, but for old enemies. Whatever the Soviet may think of the irony and the inconsistency in our attitudes, our present position is a moral one.

Whether war comes or not, the unflinching position of this country is the best guarantee that it won't. Our experience with the Communists has taught us that if you give, you will be asked to give more. It is quite possible that we might be able to negotiate some sort of settlement of the Berlin crisis, but if we did, in the light of our past experience, the Communists would only proceed to create a new and similar crisis somewhere else.

CAN'T EASE POSITION

This country could agree to giving the Communists all of the land, all of the buildings and all of the other material wealth of West Berlin, agreeing to build a new West Berlin somewhere else and moving all the West Berliners there, even if it cost a few

billion dollars. This would be a bargain compared to 20 minutes of nuclear war, but one crack in our position and the Communists would have us on the run. The aim of communism is world domination, not merely the taking of West Berlin. Somewhere along the line, unless they recognize the mood we are in, they will have to be stopped by force. Communism has to go for broke at some point, and so does freedom.

What this country might well do is to take advantage of the dissatisfaction that undoubtedly exists in the slave countries by extending an invitation to all the oppressed to cut the Soviet down from behind, the second world war III starts, as it may in the next few months. If we are sitting on a powder keg, the Soviet are sitting on a much larger one. A war might unite the Russians on a nationalistic basis, but it would not serve to unite the oppressed people they are sitting on throughout Europe.

It may just be that Mr. Eisenhower, as a military man who knows war but hates it, is the right man at this moment to be in the White House.

## Salt Water Research Plan in Texas

EXTENSION OF REMARKS
OF
### HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 25, 1959*

Mr. YARBOROUGH. Mr. President, I have received a resolution from the Texas Legislature regarding the construction of research facilities to develop ways of converting salt and brackish water to pure water. I have spoken on this subject heretofore in the Senate. At this time I ask unanimous consent to have printed in the Appendix of the RECORD the resolution passed by the Texas House of Representatives.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Texas Legislature has learned of the plans of the U.S. Department of the Interior to build several research facilities to develop ways and means of converting salt and brackish waters to pure water for human and animal consumption; and

Whereas the plans envision locating five such facilities at scientifically strategic sites over the United States, including two along the seaboard; and

Whereas many have sought for years to develop economically feasible processes to convert salt and brackish water into quantities of water fit for human and animal consumption and such goal will be within sight if the problem is attacked broadly as planned; and

Whereas the large-scale conversion of sea water into water for drinking and irrigation purposes can be attacked scientifically at many locations along our long coastline, but the location of inland facilities must be carefully chosen so as to have available the kind and character of water typical of large inland areas; and

Whereas the underground waters in the Trans-Pecos region of Texas are typical in character and quantity of a large portion of the great Southwestern area of the United States and merit inclusion in the forward-looking and economically potent plans of the Department of the Interior; now, therefore, be it

*Resolved by the House of Representatives of the 56th Texas Legislature,* That the Honorable Fred Seaton, Secretary of the Interior of the United States be and is hereby urged to direct a careful examination of the Texas Trans-Pecos area and the consequent location of one of the five facilities mentioned at Pecos, Tex.; and, be it further

*Resolved,* That a copy of this resolution be sent to members of the Texas delegation in Congress.

## Union Leader Becomes Industrialist

EXTENSION OF REMARKS
OF
### HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. O'NEILL. Mr. Speaker, on Sunday, March 8, 1959, the Boston Globe carried an article on my very good friend, Walter W. Cenerazzo, of Somerville, Mass. I have known Walter intimately for many years, and I am more than proud of our close association. Walter's is the true enterprising spirit. He is an inspiration to all who have had the privilege of meeting and talking with him. I believe that what reporter K. S. Bartlett has to say will be of interest to my colleagues in the House, and I am most happy to bring the article to their attention.

UNION LEADER BECOMES INDUSTRIALIST
(By K. S. Bartlett)

"The hardest thing?"

Somerville's Walter W. Cenerazzo, from 1937 through 1957 an organizer of unions and for the last 13½ of those 20 years national president of the American Watchworkers Union, ran a big hand over crisp, gray-flecked black hair, smiled, hesitated for a fraction of a split second.

Then the new president and general manager of McGann Bronze, Inc., 90-year-old firm, started talking fast and eloquently of the things he's found most difficult in making the transition from union organizer and official to industrialist. Although he bought into the firm in 1954 he did not take over control until he retired as president of the Watchworkers, December 31, 1957.

He still has one connection with the independent national union which he helped found in 1943–44 and of which he was the first president. On January 31 of this year American Watchworkers Union delegates in convention at Lancaster, Pa., elected the second president in the union's history. During the year following Cenerazzo's retirement, the union counsel had acted as president. The delegates in a letter expressed regret that Cenerazzo felt he could not continue as an officer of the union, and appreciation of what he had done for the national organization and for watchworkers throughout the country.

"By unanimous vote of all present," the letter, signed by each delegate, went on, "you have been elected president emeritus of the American Watchworkers Union."

Said the 45-year-old Cenerazzo, half ruefully, half proudly:

"They told me when they invited me to the convention, and I declined, explaining why and giving my reasons for not continuing as an officer, that they intended to do this.

"I said 'No, I'm too young to be an emeritus anything. Wait until I'm 65 and I'll be glad to accept.' What am I going to do now? What can I do?"

Obviously he's pleased by the tribute.

That hardest thing about the transition from union official to industrialist Cenerazzo thinks has been learning the businessman's approach to customers. It's a matter of selling a product, of going on the principle that the "customer is always right" even—and perhaps especially then—if he's wrong.

He's had to learn not to argue, at least not in the way he'd argued as a union representative trying to get better pay, working conditions or other benefits from company representatives. Or battling before congressional committees for higher tariffs on Swiss watches.

Almost as hard, he says, is to remember always the results of cost analysis, to know what the actual cost of producing any given product is—so that you don't sell at a loss.

Earlier in the day he'd shown me the workings of the foundry in the building at 27 Village Street, Somerville, to which the founder of the firm, Thomas F. McGann had moved it in 1906 from its original location at 104 Portland Street, Boston. Also he showed the new building alongside the foundry where McGann Bronze, Inc.'s new activity is carried on. This is making marking devices such as rubber stamps.

This was Cenerazzo's idea. It stems directly from the days when he was in the printing trade. He left Somerville's Southern Junior High School at 15 and until he was 24 worked on many papers in many parts of the country, partly as a substitute. In every city, at every job he picked up facts useful to him. He still has his card in I.T.U. and demonstrated for me that he still knows how to set type.

The transition wasn't made all at once. In 1952 Cenerazzo and his wife, the former Marion Harding of Belfast, Maine, built the first section of Marion Village, now a thriving motel and restaurant in Rockport, Maine. Mrs. Cenerazzo runs it during the tourist season. In 1952 Cenerazzo was beginning to think of going into business for himself since the eight years originally set as the maximum term for a president of the American Watchworkers Union would expire the following year. But in 1953 conditions in the American watch industry were such that it was decided he should stay on and do what he could to help.

Early in 1954 John F. McGann, president of T. F. McGann & Sons Co., a son of the founder, suggested that Cenerazzo come into the firm and help the third generation of McGanns keep the business going.

Cenerazzo had known the McGanns all his life. He decided to buy into the firm. The elder McGann died a month later but although Cenerazzo helped in various ways he didn't become president and general manager until 1958.

It was in the summer of 1954 that Cenerazzo had one of his big moments as a union man. He told as he landed at Washington's National Airport that President Eisenhower, breaking administration precedent, had signed a proclamation raising the traiff on imported watches, as much as 50 percent in some cases.

Wrote the Globe's John Harris, then in Washington:

"Cenerazzo, as his intimates well know, is not often at a loss for words. A genuine human dynamo, he has become widely known for his talent both as a speaker and a writer.

"Overwhelmed by the news, Cenerazzo was silenced for many moments by the emotional impact on him."

Then Cenerazzo, who had fought for years, sometimes almost single handed, for higher tariffs, told Harris that it was not a victory for him but for "a lot of people who have spent a lifetime in an American industry

and were finding themselves out of jobs and their skills going to waste."

The effects of the victory were later partly nullified. Cenerazzo stayed on as president of the American Watchworkers Union until December 31, 1957, when, he says, he felt he should take himself off the payroll of the union because "what funds were there were necessary for expenses" for the operation of the organization.

One of the employees in the foundry is Hungarian-born Lester Dukta, who went to work in the McGann plant in 1917. It was Dukta who demonstrated for me some of the fine points of casting tablets, urns, and statues in bronze.

Later Cenerazzo and John F. McGann, Jr., a grandson of the firm's founder and, like his brother, Thomas F. McGann, a vice president of the firm, showed some just finished products.

Brand new was a bronze plaque with a life-like figure of an albacore which will be placed in the wardroom of a new U.S. submarine, the *Albacore*.

Maybe it reminded Cenerazzo of the time in 1938 when he helped organize the Gloucester Sea Food Workers Union of which he later became business agent.

He talked about two giant lobsters, cast in aluminum and painted, which hung on the wall. One was delivered that afternoon to Jimmy's Harbor Side Restaurant where Cenerazzo often has lunch. The other will be at Marion Village when the tourist season opens.

Memorial tablets of various kinds, honoring the dead make up a large part of the firm's business. So do tablets honoring contributors to great causes; State and city seals to be placed on public buildings, bridges, etc.; and seals or emblems of various organizations.

The firm made several tablets for the Boston Globe's new building.

## The Manufacturer's Double Play

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker—

I can, however, suggest a possibly profitable path for this subcommittee's inquiry * * *. Large department stores or mail order houses may well encourage manufacturers to fair trade nationally brand items, the only items which the small retailers can secure. At the same time, such mass sellers may market their own private brands—substantially identical to nationally branded goods—at prices lower than fair trade markups for the nationally branded counterparts. The result could be to enable large retailers, by hampering their smaller competitors' ability to cut prices, to hold an umbrella over the market for their own private branded items. In closing, I take the liberty of suggesting that this question might well be an area ripe for this subcommittee's inquiry. Quote from Bicks, Justice Department antitrust attorney, testimony.

This quotation is self explanatory. Also, the manufacturer has an interesting part. He gains the right to set the retail price. Thus he binds the retailer and for this new right he contributes nothing himself. Indeed, he is free, after setting a price floor and guaranteeing a profit margin for himself to manufacture identical merchandise for some big store who can set any price it chooses after removing the trademark undercutting the independent retailer with the same merchandise, yet the independent cannot change his price. No wonder the manufacturer wants fair trade. No wonder the big chain or department stores will not be hurt. The wonder is that proponents of fair trade overlook the fact that the only one who can be hurt, even ruined by fair trade, is the smaller retailer and his national lobby representatives are pleading for this bill.

## Benson Gaining Support

EXTENSION OF REMARKS
OF
### HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. DIXON. Mr. Speaker, from the days of the early Greeks and Romans, and even before, the vitality and growth of a nation could be determined by the activity of that nation's markets. Free markets, bringing together free sellers and free buyers, served as the mainspring behind national progress.

Someplace along the line we in America sacrificed our free agricultural markets on an altar of expediency and fear. We became fearful that our agricultural economy could not prosper as a free facet of our economy. We started to shelter, to control, and to regulate it. Today we have all but smothered it.

A leading exponent of free markets, of course, has been our dedicated Secretary of Agriculture, Ezra Taft Benson. He has warned the American people of what is happening to our agricultural economy. He has pointed out that agriculture must be given room for breathing and expansion in free markets. For his trouble, the Secretary has been maligned and has suffered indignities not befitting a man of his character and demonstrated ability.

Daily, however, Secretary Benson has found new allies, both in the field of agriculture and without.

One of the most important allies, not only for Secretary Benson, but for the entire agricultural economy, has been the Board of Trade of the City of Chicago. The support of such a group is important, because the sole purpose of the board of trade is to bring buyer and seller together freely for the buying and selling of agricultural products. The activities of the commodity exchanges is a vital link in the chain from production to distribution. As a result of bringing the competitive forces of supply and demand together in this fashion, grain and grain products are distributed nationally and internationally. The operations of the Chicago Board of Trade are under rigid self-imposed rules of business conduct, as well as Government regulation. The board's primary objective is to provide the Nation with the most efficient grain marketing services at lowest possible costs.

I should like to conclude these remarks by including in the RECORD the agricultural policy statement of the Board of Trade of the City of Chicago, adopted recently. The policy statement follows:

AGRICULTURAL POLICY STATEMENT

Despite having, for over 6 years, a Secretary of Agriculture dedicated to free markets, the entrenched bureaucracy and self-interest of those who prosper under control have led the country further down the road to complete Government domination of the free agricultural marketing system. The President of the United States, in his state of the Union message, indicated that by July 1, 1959, Commodity Credit Corporation would have $9 billion tied up in loans and surplus commodities, and that the carrying charges on this mountain of production would run to $1 billion annually.

This continued expansion of CCC and its increasing inroads into the marketing of grain has brought a greater awareness to the majority of the membership of the association of the problems, and of the need for positive action. It is time to take up the challenge, since it is clear that the natural course of events cannot be depended upon to help free markets.

The board of directors of the Board of Trade of the city of Chicago has, therefore, adopted the following as basic policy to guide the association in its continuing struggle for restoration of free markets.

"We must go on record as being vigorously opposed to all programs and policies that result in agricultural food and fiber not clearing through the market. Therefore, basic policy of the Chicago Board of Trade is to:

"1. Take a more aggressive stand on the elimination of governmental competition and domination of free markets.

"2. Act as a more forceful spokesman in defense of the private marketing system as opposed to State trading.

"3. Give open support to those farm leaders and farm organizations when those leaders and organizations work for the programs that benefit the private marketing system.

"4. Support legislation which will keep the Government from acquiring surpluses of commodities."

## Poison in Your Water—No. 47

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting in the Appendix of the CONGRESSIONAL RECORD an article appearing in the Brownsville, (Tex.) Herald, on February 6, 1959, entitled "Sewage Is Costly to the City."

SEWAGE IS COSTLY TO THE CITY

The city is spending $321.75 a day on chemicals to cut health hazards involved with sewage overflows, the city commission learned today.

"We have been using 2 barrels of chemicals a day and a third sewage overflow has necessitated an additional barrel at a cost of about $100 a barrel," Jim Wilson, city sewage filtration plant superintendent said.

It was stated by city engineer, John Huth, that the broken sewer lines near the intersection of Boca Chica and Central Boulevards had been taking in sand for about 4 years.

Sewage is spurting from the top of several manholes.

One overflow, located near Russell Elementary School, has been running into a storm sewer that flows into nearby City Resaca.

"Dead fish were floating there this morning," Wilson said.

Commissioner Dr. Jack Palmer who lives two blocks from the school, has taken the lead in getting the smelly situation corrected.

"What is the condition at Russell?" Mayor M. M. Vicars asked Palmer.

"It smells," Palmer said.

"I mean should the school be closed or what?" Vicars asked.

"Emergency measures should be taken to straighten out the situation as soon as possible," Palmer replied.

Wilson told the commission that industrial wastes are also causing the lines to become clogged. "They should put screens over their line entrances," he said.

Commissioner Tony Carnesi asked Wilson about an ordinance that was supposed to have been worked out to regulate sewage disposal by industries and it was brought out that it had been dropped.

"Why?" asked Carnesi.

"Political pressure," Commissioner Emilio Crixell answered.

Huth was asked how much did he think the sewer line repairs would come to and he said "about $8,000." It was pointed out that that did not include costs of chemicals or a $4,000 machine procured for the project.

## Jew, Arab "Feud" at Hillsdale

EXTENSION OF REMARKS
OF
### HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ADAIR. Mr. Speaker, in these days of international tension, it is refreshing to find a situation in which Jewish and Arab young men get along well together. Such is the case at Hillsdale College, Hillsdale, Mich., where Lee Levy and Ahmad Jallad are roommates. The South Bend, Ind., Tribune recently had a story on this and I ask leave to include it herewith:

JEW, ARAB "FEUD" AT HILLSDALE

(By Joseph B. Tierney)

In Jerusalem, snipers are still firing back and forth across the border which separates the city into Jewish and Arab sectors.

In a dormitory room at Hillsdale College, the sniping on the same subject is taking place between a Jewish boy from South Bend, and an Arab youth from Jerusalem.

The sniping in Palestine is with bullets and in deadly earnest. At Hillsdale College, the sniping is with words and is good natured.

The South Bend participant in the debates at the Hillsdale, Mich., college is Lee Levy, 18, son of Mr. and Mrs. Melvin Levy, 1507 East Colfax Avenue.

TWO SHARE ROOM

The Arab "sniper" is Ahmad Jallad, 21, of Jerusalem, son of a captain in the intelligence branch of the Jordanian Army.

The two, Arab Moslem and American Jew, share a room in the college which had its origin as a Baptist missionary school. If that isn't cosmopolitan enough, the two intend to take an apartment next year with another student who is a Christian.

In South Bend to spend the holiday between semesters last week, Lee and Ahmad said their rooming together has stirred a lot of comment on the campus of the college, "Almost all of the comment has been humorous," Lee added. "People kid us about having a border line drawn down the middle of the room and that sort of thing," Ahmad said.

In his 4 months at the school, Ahmad has picked up the nickname "Okie." Lee explains that the tag was hung on Ahmad because in his early days at the school, his comments were restricted largely to "okay" on almost any question.

LIVED ON HAMBURGERS

"I lived on hamburgers for almost a month before I learned to order food," the Jordan youth commented in his much improved English.

Ahmad, who served with the Jordan guerrilla forces during the battle over establishment of the Jordan-Israel border, attended a missionary school in Jordan. He decided to make a career of foreign service and came to the United States to study to broaden his knowledge of the world and of international politics. Robert Watkins, U.S. Ambassador to Jordan and a graduate of Hillsdale College, suggested the Michigan school when he learned that Ahmad was coming to this country.

"I'm learning a great deal about the political situation in Jordan and Israel," says Lee. While he was interested in the establishment of the new Israel state, before meeting Ahmad, he did not have much information on the subject, he admits.

HAS PERSONAL MEMORIES

Ahmad has some bitter personal memories of the establishment of the new nation and he admits that these memories probably color his overall view of the situation.

Before the establishment of the Jordan-Israel border, Ahmad's father owned 1,000 acres of land in Jordan. When the Israel border was drawn, the land was inside the border and Ahmad's family was evacuated.

The dormitory room Lee and Ahmad share is naturally the center of discussion on matters concerning the Middle East and the bull sessions sometimes run well into the morning. The discussions become heated from time to time, the students say, but not heated enough to threaten their friendship. The roommates stay rather close together in the activities they participate in.

Both are wrestlers and both are pledged to Kappa Sigma Kappa fraternity. Ahmad dropped from the wrestling team because of a leg injury but Lee is still on the varsity squad.

For Ahmad, the prospect of being away from home for 7 years is not very pleasant but he says he is willing to forego the pleasures of home for a better knowledge of the world and the people in it.

"My father advised me to go abroad for my education," Ahmad explained. "He told me, 'Go away from home and you will learn to feel your country.'"

## Americans Traditionally Oppose Fair Trade Price Fixing

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, in 1945 the FTC in an 872-page report concluded generally that resale price maintenance was unsound economically, tended to destroy competition, and at least in certain areas, favored the large concerns. So spoke Chairman Gwynne reminding us on the Fair Trade Subcommittee last year that fair trade was traditionally opposed by FTC and the people of this country, as a matter of principle to free people in a free country.

In 1952 the FTC described resale price maintenance as:

Contrary to the public policy expressed by Congress in the antitrust laws since 1890 and contrary to the public policy expressed by Congress in the Federal Trade Commission Act.

Since the concept of resale price maintenance contravenes the traditional ideas of the American systems of free competitive enterprise, you would not expect Congress to try to support resale price maintenance. Are we? Yes, by name—the fair trade bill H.R. 1253, permitting the manufacturer to set the retail price on his merchandise by setting aside the antitrust law.

## The Supreme Court and the Rule of Law

EXTENSION OF REMARKS
OF
### HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. HÉBERT. Mr. Speaker, Dr. Ray Forrester, the able and distinguished dean of Tulane University Law College, made one of the most piercing and thoroughly objective studies of the present Supreme Court and its transgression on the legislative powers of the Congress.

Dean Forrester's address is all the more important in that he has altered his original opinion of the functions of this Court.

With the permission of the House I am now placing at the Members' disposal a copy of Dean Forrester's address which all should read and from which all should learn.

THE SUPREME COURT AND THE RULE OF LAW

An able professor of law, who now sits on the Supreme Court, once said:

"In simple truth, the difficulties that government encounters from law do not inhere in the Constitution. They are due to the judges who interpret it. * * * That document has ample resources for imaginative statesmanship, if judges have imagination for statesmanship."

Not long after the Brown decisions when suggestions of violent resistance were beginning to appear, I made a series of speeches, saying:

"The basic concept of the rule of law is * * * that the governors as well as the governed must follow and abide by the established system of law, including the established system for making, changing, and interpreting the law. The alternative to the rule of law is anarchy and revolution—the solution of problems by force rather than by law and reason."

And further on, it was said:

"While it is permissible to criticize decisions of the Court and to work for their re-

versal—for the Court is certainly not infallible and has often changed its position when convinced of prior error—this should be done in an orderly and peaceful manner. The law and the Court, as an institution, should be respected in the meantime. It is dangerous to attack the traditional function of the Court and to seek to undermine public acceptance of the Court, as an institution, for that is the keystone of our version of the rule of law and the foundation of our law-abiding traditions."

What I said was and is true. But I failed to emphasize the dual and reciprocal nature of the rule of law. My comments were directed to the governed. They were one-sided in that I did not stress the fact that the governors are also bound. I did not explain the provisions of the rule of law which govern the Supreme Court and which give protection to the governed from possible abuses of power by that body.

At that time I was fearful of the violation of the rule of law by the governed. Now, I have come to the conclusion that the Court, while insisting on the faithful observance by the governed, has failed to give faithful adherence to that portion of the rule of law applicable to itself.

From the time of John Marshall the Court has spelled out its own rule of law. The basic essentials are:

First. That it shall exercise only the judicial power;

Second. That is shall live faithfully with the principle of the separation of powers, using care not to cross the line into the legislative or executive field or into the powers of the States;

Third. That is shall be governed by the rule of self-restraint, scrupulously withstanding the temptation to assume the role of the protagonist, or to infuse its decisions with the individual opinions of its members on moral and social issues of policy, bearing in mind its delicate and fragile role of final and impartial arbiter whose judgment is without appeal, except by extreme measures, and whose power is based, finally, on voluntary acceptance born of public confidence in its wisdom and sober judgment.

In the several instances in American history when the Court has violated its own rule of law, the result has been a loss of respect not only for the Court but for law in general and for the law-abiding habits of our people.

As a present member of the Court once said: "To what extent the feeling for all law is attenuated by nationwide disregard of one law, no man can measure."

The Dred Scott case is an example with which we are all familiar. Such manifestations of judicial self-assertion endanger the rule of law in its entirety. The effect and the hazard go far beyond the immediate problem.

In suggesting that the members of the Court have violated the rule of law, I do so with recognition of the integrity of the individual men involved, with awareness of the awesome task they perform, and with appreciation of the idealism and good intentions with which they have acted. The end they seek and the vision that draws them on is, undoubtedly, that of a better America and a better world as they see it. But the means they have chosen must be tested by the results. Not the least of these is the present status of the public respect for and acceptance of the Court, which is the keystone of our rule of law.

What is its present status as to public acceptance? How faithfully is it adhering to its rule of law?

On this vital issue I offer, first, the following witnesses: the chief justices of the State supreme courts, the members of the Federal judiciary other than those on the Supreme Court, the Congress, the President, and, finally, Learned Hand. Second, I will review briefly a few representative decisions of the Court.

The first witness: According to the Conference of Chief Justices of the United States, the Supreme Court exhibits the following characteristics (which I quote or paraphrase from the committee report approved by the conference):

1. It presses the extension of Federal power and presses it too rapidly.

2. Adopts too often the role of policymaker without proper judicial restraint.

3. Assumes, in cases arising under the 14th amendment, primarily legislative powers.

4. Assumes almost unlimited policymaking powers beyond those ever contemplated by the draftsmen of the original Constitution or of the 14th amendment.

5. Attains immense, and in many respects, dominant power despite the constitutional system of checks and balances and of separation of powers.

6. By its recent decisions, casts considerable doubt on the validity of the American boast that we have a government of laws and not of men.

7. Creates needless uncertainty by multiple opinions and conclusions unsupported by a majority theory.

8. Fails itself to accord finality to its own decisions and to the doctrine of stare decisis, while it expects firm adherence by those subject to its power.

In conclusion, the conference said:

"Frequent differences and occasional overrulings of prior decisions in constitutional cases cause us grave concern as to whether individual views of the members of the court as from time to time constituted, or of a majority thereof, as to what is wise or desirable do not unconsciously override a more dispassionate consideration of what is or is not constitutionally warranted. We believe that the latter is the correct approach, and we have no doubt that every member of the Supreme Court intends to adhere to that approach, and believes that he does so. It is our earnest hope which we respectfully express, that that great Court exercise to the full its power of judicial self-restraint by adhering firmly to its tremendous, strictly judicial powers and by eschewing, so far as possible, the exercise of essentially legislative powers when it is called upon to decide questions involving the validity of State action, whether it deems such action wise or unwise. The value of our system of federalism, and of local self-government in local matters which it embodies, should be kept firmly in mind, as we believe it was by those who framed our Constitution.

"At times the Supreme Court manifests, or seems to manifest, an impatience with the slow workings of our Federal system. That impatience may extend to an unwillingness to wait for Congress to make clear its intention to exercise the powers conferred upon it under the Constitution, or the extent to which it undertakes to exercise them, and it may extend to the slow processes of amending the Constitution which that instrument provides. The words of Elihu Root on the opposite side of the problem, asserted at a time when demands were current for recall of judges and judicial decisions, bear repeating: 'If the people of our country yield to impatience which would destroy the system that alone makes effective these great impersonal rules and preserves our constitutional government rather than endure the temporary inconvenience of pursuing regulated methods of changing the law, we shall not be reforming. We shall not be making progress, but shall be exhibiting that lack of self-control which enables great bodies of men to abide the slow process of orderly government rather than to break down the barriers of order when they are struck by the impluse of the moment.'

"We believe that what Mr. Root said is sound doctrine to be followed toward the Constitution, the Supreme Court and its interpretation of the Constitution. Surely, it is no less incumbent upon the Supreme Court, on its part, to be equally restrained and to be as sure as is humanly possible that it is adhering to the fundamentals of the Constitution with regard to the distribution of powers and the separation of powers, and with regard to the limitations of judicial power which are implicit in such separation and distribution, and that it is not merely giving effect to what it may deem desirable."

It should be noted that these conclusions were supported by 36 chief justices and disapproved by only 8. (Two justices abstained and four were not present.)

The second witness: In answer to an inquiry by a national periodical directed to all judges of the U.S. courts of appeals and U.S. district courts, asking whether they agreed or disagreed with the conclusions of the chief justices, 128 of the Federal judges replied. Forty-six percent of those replying expressed agreement. Thirty-nine percent disagreed. Fifteen percent preferred not to express any view.

The third witness: The Congress of the United States, through its consideration of the Jenner bill during the last session, expressed its own disapproval of the Court and reflected the growing lack of confidence of the people by nearly enacting a statute which would have substantially curtailed the basic powers of the Court.

The fourth witness: The President, in this delicate situation involving a coordinate branch of the Federal Government has followed the advice that Holmes once gave to a wordy lawyer. "Counselor," he advised, "you should read French novels, they teach one to say a lot by innuendo." The President has said a lot by what he has not said.

And last but by no means least, the witness Learned Hand, who with characteristic early insight and independence of thought, stated his judgment some months ago, even before the more recent decisions and before the others had spoken. He suggested that the Court has assumed the role of a superlegislature, a third chamber.

Need I sum up the answer and the emphasis that these witnesses give? They speak for themselves.

But so that our judgment will not be entirely dependent on the opinions of others, though they be those best qualified to know, let us review briefly a few samples of the work of the Court; a case involving State power to regulate admissions to the bar, cases concerning criminal justice, and the cases regarding segregation.

First, *Konigsberg* v. *State Bar of California* (353 U.S. 252) decided in May of 1957. In this case an applicant for admission to the bar refused to answer questions regarding his Communist affiliations, past and present, in a hearing before the State bar examiners. The Supreme Court did not deny that these questions were relevant and permissible, nor did it deny that the burden was on the applicant to show his good moral character. Yet the majority found that the State examiners had violated the due process clause of the 14th amendment by denying admission. They expressed their reason as follows:

"We are compelled to conclude that there is no evidence in the record which rationally justifies a finding that Konigsberg failed to establish his good moral character or failed to show that he did not advocate forceful overthrow of the Government."

Does it make sense to recognize that certain questions may be asked by the State in deciding on admission to the bar and then hold, in effect, that refusal of the applicant to answer the questions cannot be taken into account by the State in evaluating him?

Mr. Justice Harlan, in dissent, stated:

"What the Court has really done * * * is simply to impose on California its own notions of public policy and judgment * * * today's decision represents an unacceptable intrusion into a matter of State concern."

The committee report, approved by the Chief Justices, said that the case reached "the high-water mark so far established by the Supreme Court in overthrowing the action of a State and in denying to a State the power to keep order in its own house."

In *Griffin* v. *Illinois* (351 U.S. 12) decided in April of 1956, the Court held that an indigent defendant in a criminal case had a constitutional right to receive a transcript of record free of charge for purposes of appeal, where other defendants in similar cases were permitted review at their own expenses. Mr. Justice Frankfurter, concurring, urged the Court to limit the effect of the decision to future cases and to exclude past proceedings because of the "numbers unknown to us * * * who will find justification in this opinion unless properly qualified (to claim) that they are under illegal detention." But the majority ignored this word of caution, prompting the chief justices to observe that:

"Just where *Griffin* v. *Illinois* may lead us is rather hard to say."

This apprehension was confirmed by the decision of the Supreme Court in *Eskridge* v. *Washington* (78 S. Ct. 1061), decided in June of 1958, in which the Court applied the principle of the Griffin case, decided in 1956, to a prisoner convicted for murder in 1935.

Thus, the Court applies retrospectively a newly created right to the countless cases already adjudicated under the former rule.

On the general subject of the Court's review of State criminal cases, the chief justices said:

"In such matters the Supreme Court not only feels free to review the facts, but considers it to be its duty to make an independent review of the facts. It sometimes seems that the rule which governs most appellate courts in the review of findings of fact by trial courts is given lip service but is actually given the least possible practical effect."

And Mr. Justice Frankfurter felt obliged to say of one criminal case decided recently that:

"The present decision will turn out to be an isolated deviation from the strong current of precedents, a derelict on the waters of the law." (*Lambert* v. *California*, 355 U.S. 63 (1957).)

Further, one cannot ignore the general conclusion of Mr. C. W. Wickersham, Jr., writing in a recent issue of the Cornell Law Quarterly, when he says that the Supreme Court gives the guilty the maximum opportunity to escape the punishment decreed by Congress and the States.

The strong reaction of responsible and informed people to the performance of the present Court is indicated by the statement in the committee report, approved by the Chief Justices, concerning (*Sweezy* v. *New Hampshire*, 354 U.S. 254 (1957).)

In that case the Court reversed the New Hampshire Supreme Court which had sustained the conviction of the defendant for contempt for failure to answer questions in a State legislative investigation of subversive activity. The reversal was based, in part at least, on the ground that the prosecution had not shown that the State legislature wanted the information sought in the questions put to the defendant. The committee report said that this conclusion seemed so unreal as to be incredible.

To be fair, however, one must concede that when considered individually, most decisions of the Court are at least, debatable. But it is the trend and the pattern of the decisions that seeps into the awareness of the constant reader and slowly reveals itself.

It is interesting to note that the chief justices omitted any reference whatever to the segregation cases. Undoubtedly, they were anxious to avoid any suggestion that the racial situation was responsible for their condemnation of the Court. Incidentally, some observers contend that dissatisfaction with the Court stems largely from the segregation cases. This is an opinion I do not share. In fact, I would say that some of the more responsible critics of the Court have spoken out in spite of the fear that their position might be considered related to the segregation issue.

But while the chief justices avoided the segregation cases, there is one comment which they make that is relevant:

"Adjustments," say the justices in relation to the allocation of State and Federal power, "can hardly be effected without some friction. How much friction will develop depends in part upon the wisdom of those empowered to alter the boundaries and in part upon the speed with which such changes are effected. Of course, the question of speed really involves the exercise of judgment and the use of wisdom, so that the two things are really the same in substance."

This quotation contains the words that isolate the issue to be resolved in appraising the segregation cases—"wisdom," "judgment," "speed"—these, as the justices say, are really the same in substance. The justices thus indicated the basic weakness of the Court without mentioning the segregation cases in which this defect has had its most tragic consequence, to all concerned.

I approach a specific evaluation of the segregation cases with hesitation. My opinion there has changed substantially. Yet the change has been nearly imperceptible and is the sum total of hundreds of items of experience, conscious and subconscious, impossible to remember and recount.

I am reminded of the observation of Robert Louis Stevenson that "one of the grossest and broadest sayings conveys the monstrous proposition that it is easy to tell the truth * * * truth in human relations is of this more intangible and dubious order: hard to seize, and harder to communicate."

My own experience is reflected in the following Associated Press dispatch, which relates the experience of others. It was published before the Supreme Court decided the Little Rock case. It reads:

"The Arkansas Gazette said in an editorial Tuesday that there is no alternative to permitting a delay in integration here except the kind of Federal enforcement 'that would amount to something very like a new reconstruction.'

"The newspaper, which won the Pulitzer Prize for its locally unpopular stand during the integration crisis of last fall, said 'no one can doubt that the alternative to delay is chaos in education of a duration no man can now foresee.'

"Executive editor Harry S. Ashmore, who wrote the editorial, said 'this newspaper said in its first comment on the 1954 Supreme Court decision that the great task ahead would be to find a way to prevent serious and sustained damage to the public school system while finding means by which the South would comply with the new public policy—and we have bent our own efforts to that task.'

"We, and those who shared our view across the South, have failed. There is no way, for the time being at least, to obtain such compliance without doing serious and perhaps irreparable harm to the system of public education upon which our children, colored no less than white, are dependent.

"The editorial said that the effect of a delay this week by the Supreme Court would be to halt desegregation in the resisting States for the foreseeable future. But the Gazette took the position that this would be preferable than the alternative which it said would damage education for all.

"The newspaper suffered what it said was a 10 percent circulation loss because of its editorial support of the Little Rock School Board's compliance with Federal court directives and [its] criticism of Gov Orval E. Faubus for what it termed his course of defiance of the Federal courts.

"The newspaper continued its support of the board when it sought legal relief in U.S. District Court. That relief was granted in the form of a 2½-year-delay by Judge Harry Lemley; was denied on appeal to the eighth circuit court of appeals, and is now being sought by the board before the U.S. Supreme Court."

Mr. Ashmore's editorial proves what Mr. Justice Frankfurther once said:

"Experience often contradicts the best of abstract reasoning."

It is my conviction that experience within the last 5 years demonstrates the mistake in judgment and, above all, in timing, contained in the Brown cases. I am surprised to hear responsible people say that the Court had no choice in timing—that it was required to decide the issue when presented with it. This overlooks the inherent discretion in the Court, exercised many times, to forego the decision of a case on a particular issue raised by the parties. Certainly, the Supreme Court has the resources to leave aside the decision of an issue if it feels the result will be harmful and ill-advised, or, if need be, to follow precedent until timeliness is consistent with wisdom and sober judgment.

Timing is the crux of the evaluation of the segregation cases. I express this conviction because I believe that experience with the decisions has revealed two facts which were not foreseen by the Court in its abstract reasoning of 1954:

First. Instead of aiding race relations the cases have led to their harm. The real problem is one of human understanding and emotion and if it is to be solved it must be solved on that level. Since the Brown cases, the feelings of the races toward each other have deteriorated notably. Animosity, prejudice, hatred, and lack of communication have followed the decision, although I hasten to add that the mistakes of others have also contributed to the tragedy. But I believe that a wise court could have foreseen that this decision would provoke such a chain of events. In fact, many men of experience and good intent warned of such a result from the very beginning.

If the objective of the Brown cases was to help the Negro, to improve the relations of the races and to foster the psychological feeling of friendship and equality among them, isn't it clear that it has failed? The victories won, even from the viewpoint of the Negro, have been Pyrrhic. Perhaps what the Court really needs is a more profound understanding of human nature and social psychology than that reflected in the limited citations in the Brown case.

Sscond. The Brown case was initially defended on the ground that America should present a pure and perfect picture to the world of constitutional equality in race relations. In the abstract, this was a convincing argument; but experience has proven its fallacy. Human nature does not change overnight, even to aid the Nation in the battle with the Russians. In place of the relative quiet and steady progress of the pre-Brown period, we have created a situation that could hardly be more favorable to communism from a propaganda standpoint. At a time when our entire national attention should have been united in withstanding our enemies in the struggle for national survival, we have invented, by our own hands, a cold civil war which in many respects repeats the succession of mistakes that led to the catas-

trophe of the 1860's. Could the Russians themselves have devised a more effective and diabolical device for weakening and distracting us, than the one we have created ourselves? Could world publicity more deadly have been manufactured? The State of Arkansas, which had been one of the more tolerant of the Southern States, which had admitted Negroes to its State university without a court order, which had in good faith sought a solution to a deep-seated problem, was defamed before the eyes of the world. Little Rock, probably chosen for the integration bridgehead in the South because of the moderate and tolerant desire of its people to solve the problem was made a scapegoat before the world by the actions of extremists on both sides, leaving a scar of resentment perhaps as deep as that left from the Civil War and one which may heal more slowly. A byproduct was the recent defeat of Congressman Brooks Hays, a man of Christian motivation who had warned that extreme positions on either side would only "add to the tensions in the community that are disastrous." While the battle of Arkansas versus the U.S. Supreme Court was being waged, into which the Army and the Commander in Chief were drawn, the Russians were permitted to move forward with singleness of purpose in their quest for domination.

But you will ask, what was the alternative available to the Supreme Court in 1954 when the Brown case was decided? I offer this suggestion. Prior to 1954, the separate but equal doctrine of the Plessy case had evolved rapidly in aid of the Negro through a succession of cases, culminating in the decision of *Sweatt* v. *Painter* in 1950. In that case the Court laid down the rule that the word "equal" in the Plessy formula should be firmly and literally applied. Thus, if the separate facilities were not truly equal, the Negro was entitled to admission to the superior white school. This meant, of course, that in many areas of education the States were required to improve substantially the schools for Negroes or failing to do so, to admit Negroes in rapidly increasing numbers to white institutions. It is of special significance that the South was accepting this solution. The rule of law was being obeyed, even though in some instances, reluctantly and painfully. Arkansas and Little Rock, for example, were making substantial progress. There was no sharp, dramatic, provoking change in the law or in social custom. Many private institutions, recognizing the need of Negroes for opportunities in higher education were voluntarily, though cautiously, opening their doors. Progress for the Negro was being made; steadily, peacefully, and with gaining tempo.

This hopeful and optimistic picture was changed by the Supreme Court. Had it been preserved for a few more years or a few generations, a climate of acceptance in the Nation might have been created which would have made the wide educational opportunities for the Negro while preserving peaceful and improving race relations.

Again, I stress the factor of timing. The chief justices, men of experience in local problems, have said:

"How much friction will develop depends in part upon the wisdom of those empowered to alter the boundaries and in part upon the speed with which such changes are effected. * * * The question of speed really involves the exercise of judgment and the use of wisdom, so that the two are really the same in substance."

After all, human government can be no better in the end than human nature. While law and governmental power can nudge the human mind and spirit steadily toward a resisted end, it cannot change human nature overnight by edict alone. If it could, we might dispense with the churches and let the Supreme Court decree that under the 14th amendment sin and the devil himself shall be in violation of due process and the equal protection of the laws.

Speaking of the due process clause, let me say that perhaps the most overlooked and most revealing case of all in evaluating the present Court is that of *Bolling* v. *Sharpe*, 347 U.S. 501 (1954), the companion case to the first Brown decision.

In a cursory opinion, the Court, relying on the due process clause, in the absence of an equal protection clause in the Constitution relating to the Federal Government, held that the laws passed by Congress regulating school segregation in the District of Columbia were invalid.

Among the members of the Court joining in this result were those who had consistently objected to the use of the due process clause as a means of substituting the judgment of the Court for that of the legislature on substantive matters.

Also worthy of note is the fact that Congress is given express power in article I of the Constitution to exercise exclusive legislation in all cases whatsoever, over the District of Columbia.

The historic issues posed by Bolling, together with the seeming inconsistency of some of the Justices involved, have been lost in the dust of the Brown cases.

And what of *Cooper* v. *Aaron*, the most recent episode involving Little Rock?

Just before the opinion appeared in September, I had been reading the Bridges case, 314 U.S. 252, in which a present member of the Court, dissenting, said:

"Just because the holders of judicial office are identified with the interests of justice they may forget their common human frailties and fallibilities. There have sometimes been martinets upon the bench as there have also been pompous wielders of authority who have used the paraphernalia of power in support of what they called their dignity."

And I am reminded further of a comment by the same judge in the Pollak case, 343 U.S. 451:

"The judicial process demands that a judge move within the framework of relevant legal rules and the covenanted modes of thought ascertaining them. He must think dispassionately and submerge private feeling on every respect of a case.

* * * * *

"This case for me presents such a situation. My feelings are so strongly engaged as a victim of the practice in controversy that I had better not participate in judicial judgment upon it."

In *Cooper* v. *Aaron* there were other parties in interest in addition to Cooper and Aaron. The United States Supreme Court, itself, was on trial, together with Governor Faubus, the people of Arkansas, and to some extent the President. The case involved a sequel to the Brown decisions—a sequel which all admitted was tragic. Who was to blame? The Court gave a quick answer. It said:

"The conditions * * * are directly traceable to the * * * actions of officials of the State of Arkansas * * * which have brought about violent resistance to [the] decision of Arkansas. * * * The growth of the board's difficulties to a magnitude beyond its unaided power to control is the product of State action."

If the Court were truly objective, I think it would have added "and the product of an untimely and unwise decision of the U.S. Supreme Court." In truth, Little Rock was the result of a series of errors by several forces, all of them acting as catalysts in fanning a smoldering flame, but one which might have been anticipated and held under control by any one of the agencies involved. But, instead of admitting the painful and embarrassing truth, the Court chose to cast the entire blame on the officials of the State of Arkansas.

And what was the remedy?

In the second Brown decision, the Court made this statement:

"Full implementation of these constitutional principles may require solution of varied local school problems. School authorities have the primary responsibility for elucidating, assessing, and solving these problems; courts will have to consider whether the action of school authorities constitutes good faith implementation of the governing constitutional principles. Because of their proximity to local conditions and the possible need for further hearings, the courts which originally heard these cases can best perform this judicial appraisal."

Notwithstanding this initial explanation of policy, the Supreme Court in the Cooper case rejected a plan formulated by a school board that had worked sincerely, courageously, and with personal sacrifice to solve the local problem. Furthermore, the Court rejected the findings of the U.S. District Court which sustained the wisdom and the timing involved in a new school board plan. Was it a wise decision? Within a few weeks, all members but one of the Little Rock School Board resigned, describing the situation in which they were left by the Cooper decision as hopeless. The superintendent of the Little Rock schools, who had been given credit for formulating the initial plan, as well as the more recent one involved in the Cooper case, was dismissed.

By rejecting the solution suggested by the Little Rock moderates in the Cooper case, the Supreme Court, in practical effect, rejected them. It abandoned the moderate position itself.

Recently, during their annual meeting, the Roman Catholic bishops of the United States, after expressing their opposition to segregation, said:

"Prudence may be called a virtue that inclines us to view problems in their proper perspective. It aids us to use the proper means to secure our aim.

"We may deplore a gradualism that is merely a cloak for inaction. But we equally deplore rash impetuosity that would sacrifice the achievements of decades in ill-timed and ill-considered ventures."

Not many years ago, Holmes, Brandeis, Cardozo, Stone, and a score of other great judges carried the responsibility of dealing with the segregation problem. In view of that fact, this question presents itself: Why did they maintain the separate but equal doctrine during their tenure? It is no answer to say that the issue was not presented to them. Brandeis did not hesitate to overrule *Swift* v. *Tyson* in a case in which the issue had not been presented. He reached out and seized the issue, as the Court has done in other cases where it felt that wisdom and timeliness required it. In fact, the Erie case, which overruled *Swift* v. *Tyson* was decided in an opinion by Justice Brandeis in the same year that the Court reaffirmed the Plessy doctrine in *Missouri ex rel. Gaines* v. *Canada*. In that very case these great judges could have overruled Plessy. It is certainly no answer to say that these men approved in principle of Plessy. I am confident that each of them would have been glad to write a Brown decision if he had felt that it was within the judicial power to do so and that as a matter of wisdom and timeliness, it would have brought about more good than harm.

The same judicial self-restraint is reflected in the fact that in the days of Holmes and Brandeis the problem of equal rights for women, even in the obvious field of voting rights, was left for settlement by the Court to constitutional amendment rather than by the quicker and easier judicial fiat.

Consideration of wisdom and timing probably accounts for the consistent refusal of Congress to take action in the field covered by the segregation cases, despite the fact that

there is no question of its power to do so. The 14th amendment in the 5th section expressly provides that: "Congress shall have power to enforce the amendment by appropriate legislation."

It is relevant to note that Congress has withheld action though expressly charged with this function by the 14th amendment. The Court, with no such plain authorization, has intruded.

While there is little to be gained by pointing the finger of blame toward one of the several forces responsible for our present dilemma, I think the quotation with which I began this discussion is worthy of repetition at the conclusion:

"In simple truth, the difficulties that government encounters from law do not inhere in the Constitution. They are due to the judges who interpret it. * * * That document has ample resources for imaginative statesmanship, if judges have imagination for statesmanship."

The solution to the problem can and should come from within the Court itself. Intervention from Congress will do injury to the accustomed structure of the rule of law as now expresesd in the rules and practices governing the Supreme Court.

In times past, the Court has found a solution. I believe it will do so again with the aid of the frank counsel of its friends and the tolerant self-restraint of its responsible critics.

## Fair Trade Unmasked

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, "There will not be any price competition and there should not be" so spoke witness Edward Wimmer, testifying in behalf of the fair trade bill H.R. 1253.

What is happening to the thinking of our citizens when such statements are made showing such basic misunderstanding? Or is it intentionally the abandonment of the free enterprise which has made this Nation great? In retailing there must be competition; there must be flexibility of price; there must be economic freedom for the retailer to set prices.

Any abandonment of such a basic component part of free enterprise will ultimately destroy all parts of our economic structure, since all are interrelated—supply and demand, profit and loss, consumer buying habits and all levels of manufacturing, distribution and retailing. This is fundamental.

If there are faults, or unfair or deceptive acts, or antitrust violations, let us correct them but not abandon the system. Let us patch up the hole in the boat, not jump overboard.

Sometimes simplest things are most esaily overlooked. Perhaps new laws are not needed, only present law enforced. The Sherman Antitrust Act and Robinson-Patman Act, section 3, are specifically designed for this purpose, that is, unjustifiable price cutting.

Has it not occurred to fair trade proponents that there could even be patterns of change in goods merchandising and distribution that herald growth and improvement, requiring understanding, not another Federal law. This might well deserve the committee study that is now going to the fair trade bill, the wrong cure for a mistaken symptom.

## Second Supplemental Appropriation Bill, 1959

SPEECH
OF
### HON. ERWIN MITCHELL
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 5916) making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes.

Mr. MITCHELL. Mr. Chairman, I rise in support of the amendments offered by the gentleman from Texas, the very able chairman of the Committee on Veterans' Affairs. No one is more familiar with, and more qualified to speak on, the need for providing every cent possible for the care of veterans who are hospitalized in VA hospitals throughout the country. The amount of $4,306,500 provided for in the proposed amendment is the minimum which should be adopted. This amount does not increase the amount requested by the VA by one penny. The figure decided on by the VA was, no doubt, much less than is actually needed for the VA to do the job it is required to do by law and is certainly the least we should appropriate to fulfill the obligation which we owe to the veterans of this Nation. I hope the amendments will be adopted.

As the gentleman from Texas has pointed out, if his amendment is not adopted it will result in a freeze on all employment, a further deferrence of the purchase of necessary equipment, and further increase the already long overdue maintenance and repair projects in VA hospitals.

The gentleman from Texas has indicated the situation in regard to deferred maintenance on VA hospital facilities over the Nation. I should like to call attention to the situation as it relates to the facilities, which are woefully inadequate, in the State of Georgia. At the present time, the backlog of deferred maintenance on Georgia VA hospital facilities is in the amount of $187,597. We cannot afford to let this continue to grow by leaving needed repairs left undone. The funds requested by the VA and provided for in the gentleman's amendments, which is now before us, merely holds the line. It is urgently needed and it must be provided if we do not intend to further aggravate what is now a very unfortunate situation. I do not want to report back to the veterans of Georgia that we failed to provide the minimum necessary for the operation and maintenance of the VA hospitals and domiciliary facilities at Atlanta, Augusta, Dublin, and Thomasville, Ga.

Mr. Chairman, I also wholeheartedly support the amendment restoring the amount of $554,000, which was cut from the request for the VA outpatient program. Since every cent spent in the outpatient program goes for the treatment and care of service-connected disabled veterans, I fail to see how we can do less than provide the minimum amount requested. We all realize that even more money is needed for this purpose.

## Reported Savings in the Department of Defense Supply Systems

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. McCORMACK. Mr. Speaker, on February 18, 1959, I placed in the CONGRESSIONAL RECORD (p. A1235) a letter which I had addressed to Hon. Neil H. McElroy, Secretary of Defense concerning conflicting testimony from officials in the Department of Defense as to the effectiveness, efficiency, and economy of the so-called single manager plans for common supply in the services.

In my extension, I am placing a reply which Secretary McElroy authorized the Honorable Perkins McGuire, Assistant Secretary of Defense—Supply and Logistics—to send to me. The letter follows:

ASSISTANT SECRETARY OF DEFENSE,
*Washington, D.C., March 10, 1959.*

Hon. JOHN W. McCORMACK,
*Majority Leader,*
*House of Representatives.*

DEAR JOHN: The Secretary of Defense has requested me to reply to your letter of February 16, 1959, concerning the effectiveness, economy, and efficiency of the single manager plan.

I agree that sufficient time has now elapsed to permit a factual evaluation of the single manager program and such an evaluation is in process at present. We are examining the single manager program not only from the viewpoint of its efficiency and economy in peacetime, but also to reassure ourselves as to the mobilization and wartime capabilities of the system.

It is impossible to assess precisely the extent to which savings made through the reduction of inventories and operating expenses are directly derived from the single manager concept as compared to other improvement programs. However, our studies indicate that in the commodity fields presently covered by single management encouraging economies are being effected. For example, in the subsistence, medical, and clothing and textile commodities, we have been able to effect a reduction of about 600 personnel at an estimated annual payroll cost of $3 million. Through the development of integrated distribution patterns, wholesale stocks of single manager commodities have been withdrawn from 55 of the storage locations previously occupied. Associated with this streamlining of the distribution systems, the single managers have been able to reduce the amount of wholesale storage

space devoted to these commodities by 4 million square feet. By consolidation of inspection and test facilities, they are realizing, in addition, a net annual savings of $2,280,000.

During the 2 years of single manager operations in these same commodities, actual sales have amounted to $1,956,451,000 compared to procurement of $1,868,815,000. The excess of sales over procurement has been reflected in the increased cash position of the single managers and has, in turn, contributed significantly to reductions in new obligating authority in the President's budget as a result of transfer actions.

While we do not consider these economies to be spectacular, we believe that they are indicative of steady progress. Perhaps the most promising potential economies associated with the single manager concept arise from opportunities it provides for eliminating concurrent buying and selling and for diminishing back-hauls and cross-hauls through integrated distribution operations. Although they are not precisely measurable, it is reasonable to conclude that economies from these sources have been achieved. During the initial phases of single manager operations these economies may have been offset to an extent by expenses related to adjustment to new distribution patterns, but once adjustments to desired distribution patterns have been completed, significant economies should be possible on a continuing basis.

We have established criteria for determining additional commodities amenable to the single manager technique and have presently in progress a study to determine the feasibility of establishing a single manager for general supplies.

Your apprehension regarding the difficulties involved in embracing the operations of two single managers within a single depot is not warranted on the basis of our experience to date. At present we have as many as three single manager systems representing two services operating out of a common storage location with very encouraging results.

We do not, of course, regard the single manager program as a panacea. We view it simply as one element of a comprehensive program for the improvement of supply management of our inventories. Such a comprehensive program which integrates supply management and financial management improvements is in operation and is producing positive results. During fiscal year 1958, supply system inventories of the Department of Defense decreased by almost $3 billion in value.

The tremendous book value of total personal property holdings of the Department of Defense which, as you point out in your letter, aggregates $120 billion as of June 30, 1958 must be of continuous concern to all of us. For a full appreciation of the character of our inventory and the purposes for which it is held certain facts should be enumerated and evaluated.

Of the total personal property investment of the Department, over $50 billion or more than 40 percent is represented by the book value of whole aircraft and ships. Another $17 billion or about 14 percent is invested in tanks, other tactical vehicles, production equipment, and operating equipment of all kinds. An additional $42 billion or 35 percent is invested in technical repair parts, components, and assemblies which are required to support the peacetime operation and wartime readiness of our combat equipment. The balance of the investment which approximates 11 percent consists of equipments and supplies which have reached the end of a useful economical or military life span and are in the process of disposal, or is invested in general consumable supplies such as fuel, clothing, food and medical stocks. The character of this investment reflects the needs and the missions of the Defense Department.

The value of the personal property investment on our books is, in general, expressed in acquisition cost. Over 70 percent of the investment is in a used condition with no consideration given, in terms of book value, to the age or condition of the investment. For example, the active and reserve fleets of the Navy are included at cost in the total investment value as is the active and reserve aircraft of all services. As you know, in commercial practice such equipments are depreciated in value each year in accordance with the projected useful life span and the net book value at any time reflects a realistic appraisal of the net investment. This is not the practice in the Government. The stated book price of our investment is not a true measure of the current value of military personal property. Equipment which we are in the process of disposing of as scrap because of its age and condition is still carried at acquisition cost on our books.

The foregoing explanation is provided for a better understanding of the overall problem of improving management of personal property inventories. Within this framework we concur completely that overlapping, duplication and wasteful practices cannot be tolerated and positive steps are being taken to eliminate unnecessary duplication and waste. Recently, the Armed Forces Supply Support Center has been organized. The establishment of this center pulled together in one organization the management of the functions of cataloging, standardization, materiel utilization and a capability of dealing aggressively with interservice supply problems. Other steps are being taken such as consolidation of surplus sales offices, bringing together several retail supply system offices of the services at one location, and making available for transfer among the military Departments, without reimbursement, assets of the military services above approved peacetime and mobilization reserve levels. This latter policy conforms with previous discussions between you and Secretary McGuire.

We are preparing a detailed statement of our progress and plans concerning the implementation of section 202(c)(6) of the Department of Defense Reorganization Act of 1958. We will be pleased to furnish you a copy of this statement. We feel that you will be particularly gratified to note the improvements that are being made.

Sincerely,

PERKINS MCGUIRE,
*Assistant Secretary of Defense (Supply and Logistics).*

## Byelorussian Independence Day

EXTENSION OF REMARKS
OF
### HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. DADDARIO. Mr. Speaker, today, March 25, marks the 41st anniversary of the proclamation of the independence of the Byelorussian Democratic Republic. For this Russian state, as is true for many of her neighboring lands, this day will be a time of mixed emotions. There will be rejoicing that on this day in 1918, Byelorussia finally achieved independence after centuries of czarist oppression, but this joy will soon turn to sorrow because the Byelorussians realize that they have lost their freedom to a new form of Russian imperialism.

The world will witness two different forms of celebration on this day. The first will be a mocking farce directed by Russian Communists and staged in the streets of Minsk, the capital. The Communists will try to create the effect of an enthusiastic demonstration of patriotic loyalty to the Soviet Union, but they will not succeed for such sentiments do not prevail in Byelorussia. The second celebration, expressing the true Byelorussian spirit, will show the world that the Byelorussians are not content to exist as a Russian puppet state. It is paradoxical and tragically ironic that the Byelorussians are not free to celebrate their own independence day. They must muffle their true expressions and desires for national independence, and conform to the manner and theme of demonstration dictated by the Russian organizers who will lead their celebrations. Those Byelorussians who have sacrificed their homes in order to flee from oppression and live in free countries are urging us not to be fooled, but to let the world, especially Russia, know that free people everywhere share the hope that Byelorussia will again be a free and independent country.

## Official Advisory Consumer Council Statement

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. ALGER. Mr. Speaker, many authoritative sources have branded fair trade resale price maintenance as antithetical and destructive of the principles that make up the American system—shopping, supply and demands, bargaining, advertising, and customer-dealer relations. Here is such an authoritative study:

The Advisory Consumer Council has consistently opposed any attempt at retail price fixing. These so-called fair trade laws are nothing more than a dealer-manufacturer conspiracy to raise prices to the consuming public. They are definitely not in teh best interests of Massachusetts' consumers and some day, we hope, the Massachusetts Legislature will lead the way in repealing them. They have already been declared unconstitutional in over 25 percent of the States.

Our neighbor Canada repealed its fair trade law in 1951 largely due to an informal organization of Canadian women consumers. The awesome consequences for Canadian business, about which the friends of fair trade warned the Legislature, just did not materialize and were clearly figments of the scared imaginations of the fair trade lobbyists.

The Consumer Council is mindful of the problems of legitimate businessmen. It has cooperated, and will continue to cooperate with them i nattacking bait advertising and other deceptive-selling tactics. However, the council is convinced that fair trade price fixing is bad for the American economy, that businessmen should be ashamed to beg for this Government support, and that legislators should be ashamed to grant such a special interest law.

## Farm Policy Program of the National Farmers Union

EXTENSION OF REMARKS
OF
## HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD the following resolutions adopted by the National Farmers Union as it starts its 85th year of service to American agriculture:

MARKETING QUOTAS

All marketing quotas should be expressed in terms of commodity units such as bushels and pounds rather than as acreage allotments, or limitations upon numbers of livestock or poultry. Each farmer could produce any volume in any year and store and seal the excess under bond and sell under his marketing quota for a subsequent year. Marketing quotas or orders or stabilization programs should not go into operation until adopted by a majority of the producers voting in a referendum.

When marketing quotas are in operation each farm family should be issued a farm marketing quota certificate that would indicate the volume of sales for the different commodities which the operator could market without payment of overquota penalty or losing his income protection eligibility. The penalty for overquota sales should be not less than 75 percent of the parity income equivalent price. Sales could be made only on basis of withinquota or overquota sales certificate to be obtained by the producer from the county farmer committee. No commodity would be allowed to move in the channels of trade unless it were accompanied by a proper sales certificate.

The national marketing quota would be that volume of a commodity or group of commodities that will clear the market at the income protection level, under assumption of a full employment economy, and would be the total of domestic use plus exports plus needed additions to the national safety reserve. The national marketing quota for export commodities should be divided into a domestic marketing quota and an export marketing quota.

National marketing quotas should be annually reallocated—by farmer-elected Federal, State, and county boards and committees of farmers—to States, counties, and individual farm-production enterprises, including new producers, so that each will receive its fair proration of the national quota. The farmer boards and committees would take into account such features as: historical marketing, trends, abnormal production conditions in historical period, production resources available, rotation and fallow practices, soil and other physical factors, relative dependence of different areas and farms upon one or a few crops, good land use, soil and water conservation practices, equitable adjustments to avoid hardship, and such other similar factors as may be necessary to preserve equity and operate the programs effectively and efficiently. Proration of marketing quotas would be subject to a graduated quota assignment system.

CONSERVATION RESERVE

We urge consolidation of the Conservation Reserve with the ACP program and that the total program be expanded. Greater emphasis and attention should be given to the soil and water conservation aspects of the program. The law should be amended to prohibit the placing of entire farms in the reserve and to allow no more acres to be put into the reserve than is equivalent to the reduced marketing quotas on crops as may be in effect from time to time. Closer supervision and enforcement should be exercised by the Department and the farmer committees to see to it that land conservation and care requirements are strictly carried out in the conservation reserve and ACP programs.

COMPETING IMPORTS

Safeguards should be established to prevent the destruction or weakening of commodity bargaining power programs by imports of competing farm commodities or products or substitutes thereof. This should be done by means of automatic fluctuating parity tariff, import quotas or similar devices, or, preferably, by parity income deficiency payments, or a combination thereof as in the sugar and wool programs.

PARITY INCOME DEFICIENCY PAYMENTS

Parity income deficiency payments direct to farmers should also be used when the domestic marketing quota, established on assumption of full employment, sells in the market for less than the parity income equivalent price and should be the difference by which the market price is lower than the parity income level. Direct payments to farmers should also be used at all other times when the Federal Government determines for whatever reason that the domestic market price should be held below the parity income level. When Government payments to farmers are used to make up farm income deficiencies, the amount of such payments to each family with respect to all of the farm operations and land controlled by it should be limited to actual sales or the maximum marketing quota of an economically fully adequate family farm, whichever is smaller.

FARMER-MANAGED COMMODITY MARKETING

We urge enactment of such new and amended Federal legislation as may be required to enable the producers of a commodity jointly to establish and operate marketing facilities and institutions for selling, grading, advertising, storing, transporting, processing and assembling farm commodities and their products and to bargain collectively with a view to entering into contractual relations with existing firms with respect to the above functions and for the stipulation of prices, volume, shipping dates, grades and sizes. Such authorized activities must be of sufficient scope to enable farmers who produce the commodities to set farm prices within a framework of consumer safeguards established by Congress. Needed legislation includes at least the following:

(a) Make producers of more commodities eligible to use marketing orders and require the U.S. Department of Agriculture to provide the technical services required by producers to prepare and process their briefs for public hearings on proposed marketing orders.

(b) Authorization and promotion of industry-wide bargaining cooperatives of producers.

(c) Specific exemption of farmers' marketing and bargaining cooperatives from the application of the antitrust laws.

(d) We welcome and commend the action of the Governor of Wisconsin for initiating positive action to establish a nationwide dairy marketing association controlled by milk producers. We shall support enactment of necessary Federal legislation required to facilitate this worthwhile development.

(e) Facilitating or authorizing legislation required to establish other types of producer controlled and operated bargaining power programs as may be developed for use with different commodities, in conjunction with, or to supersede, farm income improvement programs operated by the Federal Government.

STRENGTHEN FARMER-OWNED BUSINESS INSTITUTIONS

We continue to urge adoption of positive and constructive new and amended legislation to encourage and facilitate the expansion, consolidation, and extension of farmer-owned supply, service and marketing cooperative, and other jointly owned business enterprises. This should include at least the following:

(a) Strengthen and improve the services and resources of the banks for cooperatives.

(b) Significant expansion of the technical research and services of the Farmer Cooperative Service of the Department of Agriculture.

(c) Establishment in the U.S. Department of Agriculture of a Farm Cooperative Credit Agency, similar to the Rural Electrification Administration, that would be authorized and directed to make direct Government loans to newly organized and existing institutions jointly owned by farmers, where required to supplement financing available from the bank for cooperatives for purpose of financing the building, purchase, and consolidated management of facilities for the storage processing, and marketing of farm commodities and the purchase or manufacture of farm supplies and services. Such loans should be made available in amounts up to 100 percent of the cost of such facilities at an interest rate of not more than 2 percent per year. An eligibility requirement for such loans should be the development and presentation by the farmers' association of an operation and management plan incorporating optimum scale for each operation in respect to improving technology and potential market developments. We are convinced that a new agency and program of this type is necessary for the practical and successful operation of marketing order and marketing quota programs and similar bargaining power devices in relation to many or most commodities. The Farmer Cooperative Service should be transferred to the Farm Cooperative Credit Agency when it is established.

(d) We reaffirm our stand against punitive taxation of cooperatives. We are opposed to enactment of legislation classifying cooperative savings as corporation profits. Such savings are refunded in cash or as certificates of allocated resources or other evidence of indebtedness to patrons and as such are income to the patron, not the cooperative, and should be subject to personal income tax liability of the patron rather than to corporation profits tax. Such patronage refunds as are made in the form of certificates of allocated reserves should be made legally liable for inclusion as income in personal income tax return of the patron in the year when the certificate is received at face value of the certificate in the same manner as if the refund had been received in cash. We are opposed to the imposition on cooperatives of punitive regulations respecting such certificates such as specified redemption sates, tax deferment, and required interest such as was recently recommended by the Secretary of the Treasury.

## Easter's Message

EXTENSION OF REMARKS
OF
## HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. JARMAN. Mr. Speaker, under leave granted to extend my remarks in the CONGRESSIONAL RECORD, I include the following Easter message by Mr. A. W. Kopke, of Oklahoma City:

EASTER'S MESSAGE

(By A. W. Kopke, Oklahoma Paper Co., Oklahoma City)

As we approach another joyous Easter morning, we are reminded of Calvary's Cross, a risen Christ, and spring's annual awakening. For every flower that bursts forth in its glory is an evangel of immortality clothed in the resurrection robes of spring. And we have the comforting assurance that after the sunset comes an endless dawn and eternal joy, for the way of the Cross leads home.

Easter is the celebration of life. A day in the soft spoken springtime amid the returning tide of life, marks a sublime event in the history of the soul. Upon this earth there is nothing more amazing, nothing more magnificent, than the way in which man has denied death and defied it. Frail and fleeting, there must be something in the soul of man which refuses to accept death as final. In a world of whispering dreams and wistful dust he affirms life eternal.

Calvary's cross, a Risen Christ, and springtime's annual awakening are the world's proof of immortality and the answer to mankind's most persistent question: "If a man die, shall he live again?" The old rugged cross. There it stands today above a storm encircled summit—a beacon light, casting its gleaming rays of faith and hope above all the brawling and bickering, above all the bitterness and bewilderment of a troubled world, the one symbol of man's noblest dream and fighting faith, the cross on which a body died that man's immortal soul might live, safe forever above the clouds of doubt, despair and death. Down through the travail of the centuries, this miracle word "Resurrection" has been the guiding light of mankind and dark though the world may appear today, the light of God still shines for those who seek it.

This is the message that Easter brings to us once again. So with faith renewed and strengthened through this Lenten season, let us go forward with undimmed hope to meet courageously the heavy tasks in a troubled world that have been conferred on us by the ceaseless march of destiny.

May your Easter and the days to come, be days of peace, contentment, and happiness.

## Or Could They?

EXTENSION OF REMARKS

OF

### HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 3, 1959*

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I would like to commend to the reading of my colleagues an editorial appearing in the March 24 issue of the Evening Capital, published in Maryland's capital city, Annapolis. The editorial was prompted by a proposal made by our distinguished colleague from Texas, Congressman JIM WRIGHT, in his recent remarks to the House. All of us are concerned about inflation. We may differ on ways and means to combat it, but combat it we must. Congressman WRIGHT's proposal is one of the more challenging suggestions I have seen made to the Congress—are we equal to that challenge?

The editorial follows:

COULD THEY?

Representative JIM WRIGHT, a studious Congressman from Texas, has come up with figures indicating that in the next 28 years interest will be paid equal to the total amount of the present national debt, but Uncle Sam will still owe the whole principal.

That, says Representative WRIGHT, is neither nice nor necessary—in view of which he holds up the bright promise of retiring the national debt over the next 100 years, at an end saving of more than $485 billion.

Mr. WRIGHT would do this simply by paying on the $283 billion principal each year an amount equal to not less than 1 percent of the present debt. By keeping everlastingly at the program, he goes on, year by year both the principal and the interest decrease.

And at the end of a round century the Government is out of the red, and there's plenty of money available for highways, soil projects, water resources, and whatever fine things Congressmen may have in mind 100 years from now.

Representative WRIGHT'S exciting prospectus makes passing mention of the fact that during the last 4 years the temporary debt ceiling has been extended three times and once raised permanently.

This would have to stop, of course, along with increased spending, more Government services, and a lot of other fiscal business that has been in progress for some time. They are details, however, that could doubtless be worked out.

Or could they?

## Liberals and the "Little Fellow" Hoax

EXTENSION OF REMARKS

OF

### HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Moley, from the Dallas News, Dallas, Tex., dated March 20, 1959:

SOAK THE POOR—WEALTHY DECLARED BIG BENEFICIARIES OF HOUSING PLANS

(By Raymond Moley)

The monstrous hypocrisy of the liberal groups now in control of Congress could not be better illustrated than in the omnibus housing bill before the House and the one passed by the Senate in February. These breast-beating friends of the "little fellow" propose, as they have enacted in the past, a much bigger windfall for rich investors than the alleged benefits they offer in subsidies to the people they claim to help by cheap housing.

Speeches by three Members of the House, taking less than 10 minutes of the time of the House on March 3 and 9, have opened an issue which, if seized by the President, the Vice President, and the Republican Party, could strip the mask from their political enemies who are trying to win the 1960 election with taxpayers' dollars. They could also do exactly what they proclaim they want to do—knock the "party of the rich" label from the Republican Party. It is one of the hottest but least understood social and economic issues of our time.

The three Congressmen who opened this lid are men who by ability and sincerity have won the respect of every right-thinking individual in their districts. One is a Democrat; the others, Republican. They are GORDON L. MCDONOUGH, of California, A. SYDNEY HERLONG, Jr., of Florida, and BRUCE ALGER, of Texas.

Certain public housing bonds, issued by local housing agencies, represent local obligations only. They have back of them the full faith and credit of the United States. This Federal backing gives them their gilt-edged value. The Federal Government gives them a very exclusive tax-exempt basis, which makes them very attractive to people with large incomes. They are really rich men's investments. They pay a little less than regular U.S. Government bonds—around 3 percent, depending upon the year they are issued.

In the omnibus housing bill passed by the House committee, about $2.6 billion are authorized, and over their 40-year life they will generate $1.9 billion in interest. But to a person of large means, who pays 50 percent or more in income taxes, the tax advantage will be very large, indeed.

As an example of the windfall, Herlong cited an issue acquired by a large bank to be sold to its clients. While the interest rate on these would be 3.4 percent, the people who get them, provided they have incomes of from $50,000 to $100,000 a year, will realize from 14 to 26 percent on their investment.

These bonds go into the market in competition with regular U.S. bonds, which pay only a little more in interest and which the Treasury is having plenty of trouble in selling. The reluctance of investors must compel the Treasury to pay higher and higher interest on its bonds. This will be an item in the budget which must be paid every year for all those years. The impact, therefore, will fall on all taxpayers, including the "little fellows" that the liberals claim they love so much. Thus, the liberals behind this housing bill, just like those who have voted over and over for similar bills, are really soaking the poor to enrich the rich.

This deception has been going on for a long time, and there have been strenuous protests against it. In 1952, the chairman of the Federal Reserve Board, W. McC. Martin, Jr., said:

"Not only do such issues (tax-free housing bonds) absorb some of the funds which would otherwise supply a market for Government bonds or for mortgages generated by new private construction, but they afford an opportunity for wealthy individuals and corporations to reduce legally their income tax payments in a period when it is essential that tax revenues be as large as possible."

Some of the mayors who are rushing to Washington to support these liberal housing bills should realize also that these tax-exempt housing bonds go into competition with their own municipal bonds and compel them to pay more and more interest to get money for their own communities.

It is time that this hoax on the "little fellow" be thoroughly aired.

## Ralph Renick: Outstanding Newsman

EXTENSION OF REMARKS

OF

### HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. FASCELL. Mr. Speaker, we, living in south Florida, are very fortunate in enjoying news coverage by an outstanding and one of the most often awarded television newsmen in the country. A

young man in a comparatively young industry, Ralph Renick is presently vice president in charge of news for station WTVJ, channel 4, in Miami, Fla., and is carrying on a thorough, comprehensive, and brilliant effort in behalf of WTVJ's listeners and the community.

Ralph Renick's courage, imagination, and foresight have long been a subject of my great admiration. These qualities and his respect in the community resulted in his initiation of the first news editorializing on television. The amount of study and thoughful analysis given to any question before its presentation in an incisive and penetrating portrayal is a fine tribute to the public responsibility of our news media.

Under his direction, the news department of this station has received the distinguished achievement award of the Radio-Television News Directors Association in 1951 and was named "Best in the Nation" by this organization in 1952 and 1953, and again in 1958. In addition to many other recognitions, WTVJ news' most recent honor has been a special citation for excellence in newsfilm coverage in the 16th annual News Pictures of the Year contest cosponsored by National Press Photographers Association, School of Journalism, University of Missouri, and Encyclopedia Britannica.

Personal recognition has been given to Ralph Renick in 1956 when the Florida Junior Chamber of Commerce selected him as one of the "five outstanding young men in Florida." Among awards bestowed on Renick are those from Sylvania, National Conference of Christians and Jews, Delray Beach Chamber of Commerce, Civitan Club, and South Beach Men's Club. He is president of the Greater Miami Chapter of Sigma Delta Chi, national professional journalistic fraternity, and national president of the Radio-Television News Directors' Association.

As examples of the comment set forth on issues of importance to the community, I should like to bring to the attention of my colleagues the following two recent editorial broadcasts by Mr. Renick on matters which will illustrate the type of presentation which is made:

EDITORIAL OF WEDNESDAY, MARCH 18, 1959

It takes a tremendous amount of determination of purpose for a political body to stick to its guns during a bitter fight such as the battle over Miami's port location.

The Miami City Commission is thus deservant of commendation for its four to one vote today directing new City Manager Ira Willard to do everything possible to expedite the Dodge Island port location.

The present port is located here. This 35-acre site would be sold to provide about $10 million to develop a port on the present spoil banks at Dodge Island. The city is asking for nearly $4 million from the Federal Government which will be used to dredge in this area.

This is an artist's conception of the new modern docking facility. Almost a million dollars in engineering design work has already been invested in Dodge Island by the city.

This is another view of Dodge Island's location. Beyond is the redeveloped present port area and you also see Watson Island—site of the blimp base heliport and garden of the Americas. The city commission this week turned down a 50-year lease for the south side of Watson Island. The U.S. Navy wants the lease in order to base a destroyer unit there consisting of 15 to 18 vessels.

The commission is divided on the desirability of allowing this. Listen to Commissioner Otis Shiver:

"Speaking on the subject of the placing of U.S. Navy vessels on the waterfront of Watson Island, I might say that in my own opinion I don't feel that it complies with the projection of what we have intended for the waterfront and for Watson Island as a park-playground and for other facilities."

Expressing an opposite opinion is Commissioner B. E. Hearn who believes the lease should be granted the Navy:

"We can give them permanent berthing which will mean considerable to the economy of this area and the personnel that will be delivered to Miami, from time to time, will partially offset the loss of the Marine base at Opa Locka. I think we should move ahead and make this lease available as soon as possible."

It seems that further negotiations should be had with the Navy to see if an acceptable formula can be developed to bring the destroyer unit to Miami's port. If the Navy waits until Dodge Island is readied—it may wait forever. Some type of arrangement on Watson Island is needed as a stopgap measure. It would be a loss to Miami if those ships docked elsewhere. The city needs this type of marine commerce just as the city needs a new port.

This, despite the efforts of the Dodge Island opponents to create the impression that Miami can get along just as well by allowing marine trade to go elsewhere. If the obstructionists win this battle, Miami will suffer by default a blow to the city's economy.

---

EDITORIAL OF WEDNESDAY, FEBRUARY 18, 1959

Two years ago, the Florida Legislature passed the pupil assignment law. This measure left it up to local school boards to assign pupils to a particular public school on the basis of residence, aptitude, and other criteria. Race was not mentioned in the law but the intent of the measure was to slow down or prevent integration.

Four Dade County Negro students utilizing the mechanics of the pupil assignment law applied for admission to all-white Orchard Villa School. The Dade School Board last October ordered a study to determine if the Negroes should be admitted.

Meanwhile, the Federal district court rules in another case that Florida's pupil assignment law is "constitutional on its face."

Under the law, a student turned down by his local school board appeals to the State board of education, then to the circuit court in Tallahassee. After that, a Federal court could assume jurisdiction in a case where the law was used to obviously skirt integration. The Federal court could then order integration.

Today the Dade School Board unanimously voted—based on its study of the Orchard Villa situation—to admit four young Negroes to the school next fall.

Just last week Governor Collins said it is important that the State have control over who is to be integrated and when and where. If the State, through the local school boards—adamantly prohibits integration in some schools, the NAACP, said Collins, can through Federal court action determine what Negro students will enter white public schools, in what localities, and at what time.

The Governor pointed to Virginia where massive no-integration resistance was attempted with the result that the Federal courts are calling the shots on where and when the schools shall be mixed. On the other hand, North Carolina with a pupil assignment law, similar to Florida's, has controlled school integration with the State having the say over what was done—and no schools have been shut down in North Carolina.

The Dade School Board today could have decided to go the other way but it would have eventually been to no avail and, quite probably, would have ended with the Federal court issuing the desegregation order. Certainly Orchard Villa, located in an area now poulated mostly by Negroes, was bound to have to admit Negroes sometime.

It would perhaps be more pleasant to avoid the facts. And the reaction of many political figures to the school board action indicates these men purposely or unwittingly prefer to do just that.

The U.S. Supreme Court decision—backed up by Federal court orders has become an accomplished fact. Florida has to live by the law and the pupil assignment law is superior to having wholesale integration thrust upon us.

Some degree of integration in Miami is inevitable. Miami doesn't want its schools closed, nor does it want any acts of racial violence. Nor does Miami need overmeddling by militants either for or against integration. And the remarks by the president of the Florida NAACP today calling the school board action only a token thing and urging total compliance were ill timed and will only stir waters which should remain calm. So will the comments by House Speaker Designate Beasley saying he would rather the schools closed before integration.

It is the citizens of Dade County who are affected by this action and to them lies the challenging and gratifying job of accepting today's decision in a manner which will further demonstrate our ability to cope with any problem calmly and intelligently.

We can't avoid the issue any longer.

---

## Textile Future

EXTENSION OF REMARKS

OF

## HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. DORN of South Carolina. Mr. Speaker, F. E. Grier, of Greenwood, S.C., is one of the great textile men of our times. He is a past president of the American Cotton Manufacturers Institute. The entire Congress will be interested in Mr. Grier's recent comments carried in the Southern Textile News:

[From Southern Textile News, Mar. 14, 1959]

CONTINUING TECHNOLOGICAL GAINS ASSURE TEXTILE INDUSTRY FUTURE—F. E. GRIER ANALYSES PAST AND FUTURE OF TEXTILES

(By F. E. Grier)

All of us have read a great deal in the newspapers during the last few years about the plight of the textile industry in this country. Most of the publicity this industry has received has emphasized its weaknesses and its needs. Indeed, the officials and other representatives of textile interests have tried to awaken the Government and the people of the United States to the perils which lie ahead for the textile industry unless some relief is obtained from certain Government policies which actually threaten its continued existence.

You have read how, under our Government's price support program, consumers of cotton overseas are allowed to buy American cotton at a price approximately 18 percent below the artificially supported domestic price; how foreign textile plants can buy

Government cotton for from 8 to 10 cents per pound cheaper than Abney Mills, for example, can buy cotton.

You have also heard, I am sure, how, under the Reciprocal Trade Agreement, import duties or imports of foreign textiles to this country have been cut to where cotton textile imports to the United States have increased 1,000 percent since 1947; how since 1946 a total of 717 textile plants in this country have been liquidated and how 345,000 people formerly engaged in textiles, or nearly one-fourth of the industry's entire working force, have had to seek employment elsewhere.

These problems are still with our industry. I do not minimize these problems or deny the fact that the textile industry does find itself today in a potentially dangerous situation. However, I do not wish to dwell at length on these problems, for much publicity has already been given to them. Our industry also has its strengths, and I shall try to give you a picture of the textile industry in the United States today which will emphasize its position of importance and its value to the total economy of our country.

In the first place, the textile industry is obviously one of mankind's first industries. The products of this industry, like food and shelter, are among the fundamental necessities of man.

Records unearthed in the ruins of a city in the Indus Valley in Asia showed that cotton was grown and used there as early as 3000 B.C. It is also believed that the people of the Nile Valley in Egypt had mastered the art of spinning and weaving 3,000 years before Christ. Mummies wrapped in luxurious cotton cloth have been exhumed from the tombs of pre-Inca Peru.

The armies of Alexander the Great brought cotton to the Greeks in 300 B.C. Medieval Arabs carried cotton over the trade route from India, and ancient writers described fine Arabic cloth, known now as muslin, as being so sheer that it was invisible when spread over the ground and saturated by the night dew. The Arabs called it "webs of woven wind."

The textile industry, of course, gave birth to the industrial revolution, which has in the last 100 years, transformed the economic life of most of the world.

The point I am making is that the products of the textile industry have always been and will continue to be essential to the well-being of man, that the textile industry and its products are indispensable to this country and to the world.

In the second place, the textile industry today is of tremendous importance to the total economy of the United States.

There are approximately 8,000 textile manufacturing units in our country. Most of them are concentrated along the Atlantic seaboard, but it is a fact that textile plants operate in 39 of the 49 States. The textile mill product industry pays out about $3,500 million a year in wages and salaries.

Textile manufacturing ranks among the 10 largest American industries. Textile plants employ a total of 1,050,000 men and women. In addition, there are 1,200,000 persons who depend on the apparel and related products industry for their livelihood. It would take the entire population of Mississippi, Connecticut, West Virginia, Oregon, or Oklahoma to replace the people who make and sell textile and apparel products.

THIRTEEN BILLION DOLLARS

In an average year the value of products made and shipped by the textile industry is about $13 billion, and a preponderance of these goods, destined as they are for one of the public's basic needs—clothing—becomes essential to the standard of living for people in the United States. In addition to cloth for wearing apparel, the industry produces the bulk of America's home furnishings and industrial fabrics, threads and twines, netting, belting, surgical dressings, and thousands of specialty items. During World War II the industry produced 10,000 different items for the Armed Forces, ranging from uniforms and tenting to canteen covers and helmet liners.

The textile industry not only supports its own employment and capital structure. It is at the same time the source of business and employment for many other industries. Its requirements for new equipment and machinery replacements provide the chief foundation for the American textile machinery manufacturing industry. The mills pay large sums annually for new plants and equipment. Expenditures for such assets have averaged, since 1946, about $460 million a year.

Likewise, the textile industry is annually a customer for more than $800 million worth of chemicals and $430 million worth of miscellaneous goods from such various industries as fuel and power, transportation, starch, packing materials, paper products, paint, electrical supplies, and hardware.

Translated into industrial jobs, these purchases signify employment and livelihood for hundreds of thousands of workers in other industries.

Another unique aspect of the textile industry's place in the national economy is the huge domestic market which it provides for an American-grown agricultural commodity. In the crop year ended July 31, 1957, the U.S. industry consumed more than 8 million bales of cotton and about 98 percent of this fiber was American grown. For its cotton the industry paid American farmers nearly $1,500 million.

On the average, two-thirds of the American cotton crop is consumed annually by mills of this country. Hence, the industry is the major support of cotton agriculture and is, therefore, a key factor in the economy of a region sweeping from the Carolinas through the Mississippi Delta to the Southwest and California.

The third point which I would like to make is the fact that the textile industry in America today is one of the finest examples of the American system of free enterprise. It is a highly competitive industry composed of hundreds of small units, including corporations, partnerships, and proprietorships, all vying for the consumer's favor. No one unit enjoys the advantage of as much as 5 percent of the entire market for textile products. No single large corporation or group of companies is in position to dictate or exert a controlling influence.

Accordingly, this highly competitive situation, which is in the best American tradition, works to the advantage of the consumer. During the tremendously inflationary period since 1947 the wholesale price index for all industrial products has advanced 31.4 percent. During this same period the wholesale price index for textile products and apparel has actually declined 6.6 percent.

The Bureau of Labor Statistics consumer price index for all goods and services during 1952 was 20.2 percent higher than in the base period 1947–49. To understand the relative position of the textile industry in this consumer price index, please note the following figures: the cost of medical care for the consumer advanced 38 percent; transportation, 36 percent, housing, 25.6 percent; other goods and services, 24.5 percent; personal care, 24.4 percent; food, 15.4 percent; reading and recreation, 12.2 percent; apparel, 6.9 percent; and if footwear were excluded, the apparel figure would be about 2 percent.

As Halbert Jones, president of Waverly Mills, of Laurinburg, N.C., and the current president of the American Cotton Manufacturers Institute, pointed out recently in his talk before the Carded Yarn Association, "Textiles and apparel today offer to the people of America the greatest values which are available in our markets." That the textile industry has been able to absorb the rising costs of wages, supplies, machinery, and materials and still maintain prices, at bargain levels is certainly a tribute to the vitality of this industry in our economic life. As Mr. Jones puts it, "Unexcelled value for the customer is surely a basic strength of textiles."

A fourth basic strength of the textile industry lies in its continuing technological progress. Too often this industry, which is perhaps the oldest in America, is not recognized for the vigor and vitality which it displays in the area of research and technological advancement.

Although textile manufacturing and finishing techniques have been in existence almost as long as civilized men, the American textile industry has been able since 1947 to increase its productivity per man-hour on an industrywide average by 48.7 percent. The textile industry has expanded its historical use of the 4 natural fibers—cotton, silk, wool, and flax—which have clothed mankind through the years, and it now utilizes from 25 to 30 different natural and man-made fibers alone or in combination.

Fred B. Dent, vice president of the South Carolina Textile Manufacturers Association, made the following statement just a few months ago at Clemson College before a U.S. Senate committee studying the textile industry:

In the postwar era literally hundreds of new models have been introduced in the fabric field, with the result that practically every item in an individual's wardrobe has been completely altered in structure or composition in the past 10 years. Innovations include wash-and-wear fabrics, crease-retentive and crease-resistant suitings, nonwoven fabrics, pile, fur-like fabrics, metal-coated fabrics, stretch fabrics and hosiery, embossed fabrics, silicone finishes, and a host of other items which consumers accept as everyday items now, although introduced relatively recently.

The American textile industry's research and development program is, then, another of its basic strengths and gives promise of a bright and dynamic future.

To summarize, I have tried to emphasize the fact that textile products have always been and will continue to be indispensable to the welfare of mankind; to point out the tremendous importance to the economy of the entire Nation; to make clear the fact that the highly competitive nature of this industry makes it one of the best examples of the American system of free enterprise; and to show that the continuing technological advances characteristic of the textile industry point toward a future not lacking in vitality and promise.

---

## Benson Establishes Unbroken Record Opposing Farm Legislation

EXTENSION OF REMARKS

OF

## HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. COOLEY. Mr. Speaker, it is my painful duty to report to the House that, with the Nation's agriculture headed into a new and a deeper recession, Mr. Ezra Taft Benson, the Secretary of Agri-

culture, and this administration have opposed in this Congress every bill taken up by our committee intended to stabilize and strengthen the farm economy.

The Members of the House have introduced 238 bills in the 86th Congress relating to agriculture. To this date, the Department of Agriculture has objected to every one of these bills on which it has taken a position.

This administration has set a course of lower and lower prices and income for agriculture and it stands cold and inflexible against any action of the Congress which might alter this policy of penury for our farmers.

Here is the administration's record in this Congress:

Our Committee on Agriculture called up legislation proposed by the Nation's wheat producers, to attack the surplus problem of wheat, and at the same time to provide a reasonable price for wheat farmers. The administration had conceded that our most pressing problem in agriculture at this time is the accumulation of great surpluses of wheat. Yet, spokesmen for the Department of Agriculture came to our committee room and opposed this legislation.

We called up a bill to restore a reasonable price relationship between corn and the smaller feed grains—oats, rye, barley, and grain sorghum. We did this when Mr. Benson set the 1959 support levels on the smaller grains so low as to assure hardships for the producers of these crops and at the same time to encourage larger planting of corn, already in surplus. Mr. Benson and this administration opposed us.

Consideration was set for legislation to provide a special program of research to discover new industrial uses for the products of our farms. Similar legislation was approved unanimously last year by the Senate. Yet, the Department came in and opposed the bill.

We brought up a measure supported by tobacco growers and the tobacco industry generally, to lower the parity and support level on tobacco, so that American tobacco could compete more favorably in world markets. Mr. Benson's spokesmen told us the cut was not big enough.

The great cotton producing areas of the Old South have been severely hurt by the operation of the acreage reserve of the Soil Bank. This program encouraged many small farmers to abandon their cotton acres and this has caused injury to the economy of many counties which depend upon cotton. We took up legislation to permit those farmers who do not wish to return to cotton production—now that the acreage reserve is discontinued—to lease their allotments to other farmers, so that a near normal pattern of production might be maintained to support the economies of businesses, towns, and cities which have been built to service cotton production and marketing. Mr. Benson gave a flat "No" to this proposition.

We brought up a bill which would allow cotton and rice farmers in counties where both crops are produced to exchange allotments—acre for acre—so that one farmer might have all his allotment in cotton and the other in rice. Thus a farmer would not have the expense of maintaining machinery for the production of two crops and could more efficiently produce one or the other. The Department of Agriculture opposed this bill.

Finally, Mr. Speaker, I shall cite one other bill which I thought every citizen of this Nation would approve. This measure proposes to provide $3 million additional during the current school term to prevent a closing down of the special school milk program in many States. But spokesmen for Mr. Benson appeared in our committee room and opposed this legislation. That is the bill which our committee reported and which the House on Monday passed unanimously and sent to the Senate, the objections of Mr. Benson and the administration to the contrary notwithstanding.

I do not know why the Department of Agriculture opposed the school milk bill unless it wanted to preserve unbroken its record of hostility to every piece of legislation relating in any constructive way to agriculture.

Incidentally, we should note here that the Department has not bothered to draft a bill of its own price-depressing proposal for introduction either in the House or the Senate.

Mr. Speaker, I do not expect that the President will veto the school milk bill because its benefits are to our children in much greater proportion than to our farmers who provide the milk for this program. But I want to point out to my colleagues here in the House that in this 86th Congress, as in the two previous Congresses, we are working constantly in the shadow of the veto power of the President wherever the primary interests of farmers are concerned.

The President vetoed in 1957 the bill passed by Congress to return farm price supports to 90 percent of parity. He vetoed in 1958 the bill passed by Congress to "hold the line" against any further price cuts until we could enact general farm legislation. The threat of veto killed the omnibus farm bill when it was presented by our committee last year.

We are certain that, if we pass the wheat bill brought forward by the wheat farmers of America, the President will veto it.

We are sure he will veto the effort to bring the prices of small feed grains into a fair relationship with corn, on the basis of feed value.

We sent to Mr. Benson in the last Congress bills proposing revisions in the present loan and acreage allotment program. We forwarded to him bills proposing two-price or domestic parity systems for various commodities which would let these crops move competitively into world markets while maintaining a reasonable price in our domestic markets. We sent to him proposals for production payments, compensatory payments, or marketing equalization payments to farmers. He returned them all with the Department's stamp of disapproval.

We all know that if the Congress proceeds with legislation in any one of these directions, we can expect our efforts and our work to end in a veto.

This is the dilemma which confronts us. And this sorry condition is aggravated by the fact that Mr. Benson, with the propaganda power of the Department behind him, has so divided our farmers and so confused facts that there is not now in the agricultural community of the Nation the unity essential to the enactment of a new farm program to meet the needs of the time—to turn back the economic upheaval on our farms which looms ahead of us.

Mr. Speaker, we are about to recess briefly for Easter, and many Members will visit their home people in their districts. I hope that each Member who represents farmers in this House will preach a gospel of unity, on the farms and along Main Street.

Your farmer friends will want to know why the agricultural economy is deteriorating and why the Congress has not acted. Tell them how we are working in the Congress. Tell them how our every effort is resisted by the Department of Agriculture. Tell them about the veto power which hangs over us. Tell them over and over again the necessity for unity among farmers if we are ever again to have public policies that promise for farmers a parity position with other great segments of this free enterprise economy.

## Dairymen's Dilemma Is a Many-Angled Thing

EXTENSION OF REMARKS
OF
### HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. JOHNSON of Wisconsin. Mr. Speaker, today Linley E. Juers, director of the dairy section of the Wisconsin Council of Agriculture Cooperatives, spoke at the Northeastern Dairy Conference being held here in Washington. He presented the Midwestern view on current pricing problems in the fluid milk market and how overproduction in protected milksheds adversely affects dairymen in areas uniquely suited for the production of milk. He noted that producers in certain milksheds are using such devices as health regulations to keep out milk from other regions and maintain an artificially high price.

My national milk sanitation bill—H.R. 3840—would eliminate the latter problem by allowing all fluid milk which meets the high standards of the U.S. Milk Code to move freely in interstate commerce. Mr. Juers' organization has endorsed this proposed legislation.

Under leave to extend my remarks, I would like to insert the speech made by Mr. Juers at the Northeastern Dairy Conference in the RECORD:

INTER-REGIONAL PRODUCER PRICING OF FLUID MILK—THE MIDWESTERN CONCEPT

For me to attempt to speak for all midwesterners on the topic assigned would, I think, be a little presumptuous in that it

would imply that a singular concept of fluid milk pricing prevailed throughout the midwestern dairy surplus producing area. As some of you are probably aware, no such unanimity exists in the Midwest. As in fact, individuals and producer groups can be found with views ranging to both extremes on this subject. The concept or opinion which I will persent will be my own, bearing in mind that I am a representative of a midwestern producer oriented group and it is a viewpoint which I have discussed with many of our members and found them to be in general agreement with.

There has been a growing level of dissatisfaction with the prices which have prevailed for milk in the upper Midwest during the past couple of years and along with this dissatisfaction there has been a growing animosity toward the institutions which have maintained somewhat higher levels of price in the fluid oriented production areas. Probably the prime impetus for this animosity has been the simple awareness that class I prices in many of the deficit production areas exceed $5 and $6 per hundredweight with blend prices of $4.50 or $5 while producers in Minnesota and Wisconsin are receiving an average of $3 to $3.25 per hundredweight for their milk. I think most of our people realize that the extra $2 or $3 which producers received in many of these areas is not all profit and that some part of this has to go toward paying higher feed costs and other disadvantages to dairy production in these areas. I think midwestern dairymen are also becoming quite aware of the fact that when they ship milk into these areas, the transportation cost eats up much of the higher prices being paid. The feeling exists, however, that these prices are still relatively more profitable than midwestern prices and that they are being maintained by means of certain institutions which the midwesterners are precluded from using to similar advantage.

Having led into this area I may as well go on to speculate as to whether producer prices are actually more profitable in, say the Northeast than the Midwest. My own guess is that they are more profitable. I don't have any figures which would show the absolute difference in cost of production in Minnesota and Wisconsin as against New York or Massachusetts because the figures that are available are quite deceiving. It simply is not easy to get reliable figures on costs of milk production because of differences in efficiency on individual farms and because most farms, particularly in the Midwest, don't produce just milk but several other farm commodities in conjunction with milk. In any case there are many incomparable factors and much intermingling of costs making it a difficult job to come up with any uniform type of data. Thus my reason for believing that milk prices being received in areas such as the Northeast are more profitable than the prices prevailing in the Midwest is based on the relative level of dissatisfaction over milk prices which seems to prevail in the Midwest as compared with the northeastern part of the country. I know you hear producers complaining about low milk prices wherever you go. But I'm inclined to think in many cases this type of complaining is only a defense mechanism in that producers have to complain about low prices in order to perpetuate the prices they're now receiving. This is a somewhat different case than that which prevails in the Midwest where prices have been continually moving downward and some difficult adjustment problems have developed at the prevailing price levels. This difference is quite amply demonstrated when you get producer representatives from the Midwest and from the Northeast together to discuss prospective price support programs which might be used to increase manufactured milk prices. The representatives of midwestern dairymen exhibit an almost radical willingness to explore any idea which might result in a somewhat higher milk price and net return to dairy farmers while representatives from the Northeast tend to be almost reactionary in not wanting to disturb what we've already got. If their prices weren't already more profitable than those being received by midwestern dairymen, I'm inclined to think their attitude would be somewhat more liberal in looking for alternatives which might improve the present level of prices.

I think most people in the midwest are also somewhat familiar with the mechanisms whereby prices are maintained at higher levels in the deficit production areas. Most of these methods have been tried or are in use in the midwest but unfortunately with a much lesser degree of success. The Federal order program, State milk control laws, and local sanitary regulations are the most frequently cited institutions though strong local producer organizations should probably also be included on the list. It is also recognized that in most cases it isn't just one of these institutions but two or more being used in conjunction with each other in areas where local demand for milk and milk products exceed production. The program which has been most repeatedly attacked in this respect has probably been the Federal order program. There are some markets where producer prices are administered under a Federal order in which the compensatory payments and pool plant performance requirements make it very difficult for outside milk to get in. I'm inclined to believe, however, that the restrictive nature of these provisions is more apparent than real as I think I am safe in saying that if there were any large supply of milk regularly available to these markets at the prevailing prices these provisions would break down in short order and allow that milk to enter. Thus while the provisions of the given Federal order may be a short-run deterrent to entry, over the long run it has probably been some form of State or local sanitary regulation which has given rise to these provisions under the Federal order. By setting high sanitary standards or restricting the inspection of outside milk, it is possible to create an artificial shortage of milk and thus given a shortage of supply, a price administering program can be used to administer the price upwards.

I'm inclined to think that the real problem which faces the midwestern milk producer is not that of being cut off from shipping fluid milk to distant markets so much as it is the aggregate effect of the price administering institutions as they effect the general dairy surplus problem. There is a tendency in many of the higher price markets to price the surplus milk at a level somewhat lower than that prevailing in the manufactured milk areas and at a price considerably lower than local producers would be willing to produce it for. This practice is justified in order to facilitate disposal of this milk at prices competitive with midwestern produced manufactured products without incurring any loss on the part of those handling surplus. Under the marketwide pooling arrangements the producer who brings additional surplus into the market receives the blend price which is the result of averaging together the low surplus price and the higher class I price. The result of this is that the producers have an incentive to produce surplus milk as long as the blend remains reasonably high. And it is possible to keep the blend up by justifying the maintenance of a relatively high class I price. The carrying of this surplus milk is justified as necessary operating reserve. The amount of necessary operating reserve, of course, can never be precisely determined. The perpetuation of the high level class I price with a continued high level of surplus in the market is generally considered justifiable as long as the total amount of milk on the market is remaining relatively stable or not increasing relative to the demand for milk on the market.

This type of pricing is, to my way of thinking, discriminatory and quite similar to what is known as dumping in the export trades. In order to maximize returns to the local producers in a deficit milk production area, and here I mean deficit in terms of total milk product consumption, the surplus over and above the higher price class needs is isolated from that segment of the demand for milk and dumped onto the market of the manufactured milk producer where the price depressing effect becomes manifest.

Most of the criticism with respect to fluid milk prices which has emanated from the midwest in recent years has been directed at the Federal order programs and I would be inclined to feel that there is some justification for this criticism in that there is some evidence of what we might consider undue price advantage existing in many markets which are under Federal order administration. This criticism has been directed at the Federal order program generally, but I think more specifically on certain provisions which are used in the Federal programs, such as the compensatory payments on Federal order milk. I am inclined to feel that some such pricing inequities do exist, but I am somewhat hesitant to put the blame on the Federal order program itself. As I've mentioned previously, I think there has to be some mechanism for restricting supply before a Federal order program or any other type of marketing program can administer the price at a higher than competitive level. The Federal orders do not contain such a mechanism except insofar as the Federal orders recognize the powers of lower levels of government to do so. I think it has also been amply demonstrated that the decisions rendered following Federal order hearings are just decisions, in most cases, and that the hearing procedures in themselves are such as to afford ample oportunity to be heard prior to the making of these decisions. Thus to the extent that discriminatory or noncompetitive pricing is in evidence under Federal orders, it is probably the supply restricting regulations upon which we should cast our criticism and in that area is probably where we should seek some adjustments.

It would seem to me that the dairy industry in this country should be subject to the same type of economic rules which are advocated for the general conduct of business in our society—these rules being to strive for maximum efficiency in the production and distribution of product so as to achieve the greatest amount of economic growth possible in the economy. Such research results as we have available, and I will admit they are quite meager, would indicate that the regulations which affect the production and movement of milk are tending to distort the allocation of resources in milk production away from this goal. I would cite here the results of the study published by Purdue University entitled "The Linear Programing Approach to Interregional Competition in Dairying." The results of this Purdue study would indicate that the level of milk production in both Minnesota and Wisconsin should probably be higher than it currently is, given our current market for dairy products, due to the comparative advantage of these two States in the production of milk. The study goes on to conclude that Wisconsin and Minnesota should be producing just about all of the manufactured dairy products and that 26 States in the country should probably not even be producing milk for their own fluid

consumption. Thus if we were attempting to gain a maximum degree of efficiency in milk production and distribution, the pattern of milk production and the incentives under our various price influencing programs should probably be working in quite a different direction than they are.

As to what has caused the misallocation of resources with respect to milk production which I have suggested here, I think the answer should put the blame on both ends. First of all, I think we are probably correct in assuming that there has been a strong manifestation of local producer interest in the programs which have provided favorable prices in the fluid milk producing areas. It is only natural that we should expect this to be true as every businessman represents his own interests and tries to gain a competitive advantage when such is to be had. On the other hand, however, I think there is a lot of blame to be cast on the apathy of midwestern producers and the midwestern dairy industry for not having done anything to prevent this from happening. A lot of words have been uttered and much emotion generated over the existence of these alleged inequities but not very many of these expressions have found their way into constructive testimony at Federal order hearings or legislative committees considering changes in the legislation under which price administering programs are carried out.

I think we in the Midwest are going to have to do a little better job of defining our economic goals in the dairy industry and focus our attentions more specifically in those areas where we have a demonstrable comparative advantage. I am not prepared to state specifically what actions the midwestern dairymen should take to improve their competitive lot in the dairy industry. But I do think we can present a good economic case for some general types of changes. I think we would be justified in seeking to remove some of the incentive for the production of surplus milk in fluid milk markets which is competing with the manufactured dairy products which are the mainstay of the midwestern dairy industry.

## Address of Hon. Arthur S. Flemming

EXTENSION OF REMARKS

OF

## HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. DORN of New York. Mr. Speaker, on Sunday, February 22, 1959, the Stanley H. Miner Memorial Pavilion of the Methodist Hospital, of Brooklyn, N.Y., was dedicated. We were very fortunate in having as our principal speaker the Secretary of Health, Education, and Welfare, the Honorable Arthur S. Flemming. I believe his remarks on the occasion of that dedication are worthy of the attention of my colleagues, and I incorporate them herewith:

Mr. Diefendorf, those who are associated with the ministry of this great hospital, and the friends of this hospital, I can assure you that I appreciate more than I can express adequately in words, the opportunity of participating in this manner in this dedication. I am sure that it is difficult for you to understand just how much those words from Dr. Marshall mean to me. After one listens to such words, he should be very sure of the fact, to use a Government expression, that he has a system of checks and balances operating in his own life. Through the years I discovered that the best guarantee for that is to have some children in your household. About 10 years ago, I was about to be inaugurated president of Ohio Wesleyan. Mrs. Flemming and I were walking down the main street of Delaware, Ohio, with my then 8-year-old daughter. We had just visited the grave of Bishop and Mrs. Baxter. Bishop Baxter was one of the early presidents of Ohio Wesleyan. During the course of conversation, Mrs. Flemming said to Susie, "You know daddy is about to become the ninth president of Ohio Wesleyan." Without a moment's hesitation, came the response, "Yes; and there'll be a 10th." Somehow, she was right, because there is a 10th right now, having just recently assumed the duties and responsibilities of that office.

One of the fine things about the position I now occupy is that as the incumbent of this position you are given the privilege from time to time of sharing in the victories that take place in the fields of health, education, and welfare. Surely, the dedication of these marvelous facilities is a victory, a victory over the temptation that so easily besets all of us. They want to turn aside from the opportunities to participate in the ministry of healing and to "pass by on the other side of the road."

I also want to express my gratitude to those who planned this program for making it possible for Arthur Flemming to participate in the program. This is a very special hospital as far as I am concerned. It is a hospital that was founded and has been supported by the members of the denomination with which I have always been and always will be proud to be associated. It is a hospital that for almost 20 years had the benefit of the leadership of a good minister of Jesus Christ who gave me, as he has already indicated in his introductory remarks, the right hand of fellowship as I joined Trinity Methodist Church in Kingston, N.Y., and whose life of dedicated service has always been and always will be an inspiration to me.

It is a hospital that now has as its chaplain a man who gave me and thousands of other Ohio Wesleyan students an insight into the gospel of Jesus Christ that we will never forget as he occupied the pulpit of the Williams Street Methodist Church in Delaware, Ohio, the home of Ohio Wesleyan University. It is a hospital that had as one of its trusted leaders and outstanding benefactors a truly great man whose friendship it was my privilege to enjoy over a period of the last 6 years. Ellis Phillips has left an indelible mark on my life just as I know he has on the lives of countless other persons. I am not surprised that he and Mrs. Phillips decided to give this chapel. Certainly it is a source of inspiration to those of us who have the privilege of being here this afternoon and will continue to be a source of inspiration and comfort to countless thousands of persons down through the years. The reason I am not surprised is that it was their idea that religion and education should be linked together in the beautiful building that they gave to Ohio Wesleyan University. It is providing the setting for what will be some of the most meaningful services of worship that take place on the Ohio Wesleyan campus.

Finally, this is a hospital that my father remembered in his last will and testament. I know that he remembered because of his conviction that the money that he had earned would be used in such a manner as to strengthen the hospital's ministry of healing. I am likewise sure that his bequest was his way of expressing his gratitude for a friendship that meant as much (if not more) to him as any other friendship that he enjoyed throughout his life, the friendship of Chester C. Marshall. These are the reasons that prompt me to say "Thank you" for inviting Arthur Flemming to participate in this program.

The tenth chapter of Acts provides us with an account of the visit of Peter to the town of Cornelius the centurion. Within that chapter, nine verses are set aside for the purpose of presenting to us what in effect is a Reader's Digest life of Christ as told to Cornelius by Peter. In that brief account Peter felt that it was very necessary to include this statement, "Now he went about doing good and healing all that were oppressed by the devil, for God was with him."

Have you ever thought how strange it is that an expression that Peter lifted up in order to describe one aspect of the Master's ministry is used so often in our day to express contempt for some of our fellow human beings? When men and women turn the spotlight on human needs and insist on action to meet those needs so often their efforts are dismissed by their expression, "Oh, well, they're just a group of do-gooders." It is these "do-gooders" that I would like to think about with you for just a few minutes on this very important occasion.

I'm sure that if we can engage in a conversation about this expression someone would say something like this, "I really don't intend to express my contempt for such persons. I'm simply trying to point out that they're not practical. They seem to think that money grows on trees. They just don't seem to realize that all of these needs can't be met." Frankly, I think that you and I are simply trying to appease our own consciences. We are trying to rationalize our own insistence on indulging in the luxuries of life in the midst of human need. We are trying to justify our failure to use the time, energy and resources that have been entrusted to us in order that we may go about doing good.

Today, as a result of the experiences that I have had since assuming the duties of my present office 6 months ago, I'm more thankful than ever before in my life for the "do-gooders". I'm glad that they are focusing our attention on cancer, heart disease and many other diseases that are causing suffering and heartache, and are insisting on the fact that there must be a way out.

A few weeks ago, I spent the better part of the day at the clinical center of the National Institutes of Health out in Bethesda, Md. One section of this clinical center is set aside for the research activities that center around children with leukemia. The doctors and nurses talked with me about the research activities that are underway. They told me that because of certain developments, it has been possible for them to extend the lives of the children who come to that center, not by years, but by a few weeks or by a few months. They told me about their hopes that while the lives of these children are being extended in this way, a breakthrough might take place that would make it possible for those children and many others to look forward to normal lives. That breakthrough hasn't taken place. I am convinced that as a result of the dedication that is taking place all over this Nation, on the part of men and women who are determined to stage such a breakthrough that it will ultimately take place. One cannot become acquainted with activities of this kind with the dedicated spirit that accompanies these activities on the part of doctors and nurses and research workers without being thankful for the "do-gooders" who insist on staying with this problem until there is a breakthrough.

I am glad and increasingly so that there are do-gooders in our midst who insist on focusing our attention on the opportunities that we have missed and are missing in the field of education. We haven't provided the opportunities we should provide for re-

tarded children, for execptional children, and for those who fall in between. As a society we haven't provided the educational opportunities we should provide for our children and young people without regard to race, color or creed.

Not long ago I was talking with a former distinguished resident of Brooklyn, Branch Rickey, about this particular problem and I wish that you could have heard him underline his convictions in this particular area. All we have to do is to look around us in order to realize that we are paying the penalty for sins of omission in the field of education.

I am likewise thankful for the do-gooders who are constantly reminding us of what we can do in our communities through the use of both public and private funds to help those who are ill, those who are handicapped, those who are in need of food and clothing, those who are imprisoned, and those who can profit from competent counseling. Yes; I'm thankful for the more than 6,000 do-gooders who have made this great building possible. As I think of the relationship that all this has to some community, some place in this Nation; and as I think of the tremendous opportunities for service that exist in these communities, I feel that there are times when we should hang our heads in shame when we do not follow the lead of the do-gooders at least to the extent, for example, of meeting our goal in a united fund or community chest drive.

Also, I am glad the do-gooders are pointing out what can be done to replace despair with hope by providing those who are handicapped with the medical care and with the training that enables them to once again become productive members of our community. When one begins to realize and appreciate what can be done in this area, he cannot help but wonder why we are so timid about investing our resources both public and private in vocational rehabilitation programs.

Sometimes we shrug off the do-gooders by saying something like this, "They think that government is the only institution in society that can deal adequately with these pressing human needs. Because they think this way, they constitute a real threat to our way of life." I believe that this is an unfair characterization of the persons we are talking about. Most of those who persist in focusing our attention on these pressing human needs put it this way: let's determine what we need in order to meet these needs; then, let's determine what constitutes a fair share for both public and private groups; then, let's do everything we can to persuade public and private groups to accept their fair share. In other words, the do-gooders primary concern is that we face up to the human needs that confront each one of us and resolve to do something about meeting those human needs. This kind of person I'm talking about isn't going to take very much time arguing about the method.

"Now he went about doing good and healing all that were oppressed by the devil for God was with him." Let's all of us become better acquainted with the "do-gooders" who in our day seek to follow in the footsteps of the Master. They will prick our consciences, they will challenge us not to pass by on the other side of the road in order to avoid the needs of our fellow human being. Let's not only become better acquainted, with the "do-gooders" of our day, but let's strive to be "do-gooders" ourselves. In our striving, however, let's realize that no matter how fine our resolutions may be, we will not succeed in doing good unless God is with us. During this Lenten season may we develop a far better understanding than we have ever had of the strength that God has revealed to us through His Son, Jesus Christ, can bring into our lives so that it will be possible for us to "go about doing good."

This hospital has had a great history because thousands of persons have looked upon it as a medium through which they could serve the needs of their fellow human beings; and they have never been disappointed. The resources that have been entrusted to this hospital have been used wisely and well. I am convinced that the greatest days for this hospital and for other comparable institutions throughout our Nation lie ahead of us. Never before, I am convinced, have men and women been as willing to give of their time, energy, and resources to serve others. More and more men and women want to join that great company of "do-gooders." This is why, personally, as I look to the future, I do so not with a feeling of pessimism, but with a feeling of optimism. I am convinced that as more and more join the great company of "do-gooders" that we are setting into motion those spiritual forces throughout this world that will ultimately provide us with the kind of spiritual breakthrough that will lead us into the pathway of peace.

## Greek Independence Day, March 25

EXTENSION OF REMARKS
OF
### HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. LINDSAY. Mr. Speaker, on the occasion of the 138th anniversary of Greek independence, we are mindful of the importance of Greece to the free world. I can think of no more fitting statement than that which appeared in the Greek-American daily newspaper, the Atlantis, on Sunday, March 22, written by Nick Karalekas, a member of the distinguished Greek-American fraternal organization, the Order of AHEPA:

[From the Atlantis, Mar. 22, 1959]

AHEPA ACTIVITIES—MARCH 25, 1821

(By Nick Karalekas)

March 25 is Greek Independence Day.

One hundred and thirty-eight years have passed since that day in 1821 when the Greek people threw off the oppressive chains of bondage.

This is the story of that fight for independence. Perhaps better still, it is the story of an idea, the essence of which embodies the dignity of man and the freedom of his spirit.

It started in the hills and mountains of a country of rocky soil and cold winters. From somewhere in those steep mountains, where strong men worked hard for their daily bread, the joy of independence found expression in the cry—"Liberty or Death". This defiant spark was rekindled among the sturdy shepherds who pastured their flocks where wild heather made a golden glory of the hillside. These men claimed they found the secret to happiness.

The secret was freedom.

And the secret of this freedom? It was courage. The courage to rejoice in life as one finds it and the courage to find the world pleasant to live in.

But all was not joy and happiness. These dreamers of independence knew the bitter of life as well as the sweet. They understood that joy and sorrow, exultation and tragedy, stand together without any contradiction. For he who has not felt the one cannot feel the other.

The Greek people fought against this bitterness and the tyranny which caused it.

In particular, the "Klephts" of old defied their oppressors. These "Robin Hoods" kept the tradition of nationality vivid and the love for freedom burning. Although their life was a wild and lawless one, the time came when these bands became the instrument of their country's liberation. Certainly it is with deep feeling that the Greek people always visualize a halo of national glory encircling the simple nobility of these fighters. Their deeds have been passed on to us in folk music.

In the ravines of the Pindus, and in the mountains of the Peloponnesus, these warrior heroes sang and fought to gain their independence. Their songs were simple and sincere and as sublime as the summits of the mountains they came from. They were always filled with an heroic imagery and imbued with the natural beauty of the surrounding countryside.

As sad and as melancholy as was their history, the Klepht—like Homer—gave voice to the wood, the eagle, the sun, the river and the soil. Thus, he recorded his adventures, his life and his legends.

The philosophy of these heroes is best expressed in one of their songs.

"I may have a rock for my pillow
And only the snow for my cover.
But I will NEVER serve as a slave!

"Dig a grave for me,
Large and deep,
That I may stand with my gun—
Ready to fight.

"Also open a window so that
The swallows may come
To announce the springtime.
And so that
The nightingale may come
To sing of May blossoms."

This spirit found its way into the hearts of Philhellenes the world over.

The Greek Revolution of 1821 put a new meaning into all things Greek. In Europe, a revival of the Greek culture and language began. In America, the President of the United States, James Monroe, expressed the feelings of the Nation in these words:

"The mention of Greece fills the mind with the most exalted sentiments and arouses in our bosoms the best feeling of which our nature is susceptible. Superior skill and refinement in the arts, heroic gallantry in action, disinterested patriotism, enthusiastic zeal and devotion in favor of public and personal liberty are associated with our recollections of ancient Greece. That such a country should have been overwhelmed and so long hidden from the world under a gloomy despotism has been a cause of unceasing and deep regret.

"It is natural, therefore, that the reappearance of those people in their original character, contending in favor of their liberties, should produce that great excitement and sympathy in their favor. A strong hope is entertained that these people will recover their independence and resume their equal station among the nations of the earth."

The glory that was Greece, and the glory that is Greece, lies in the quality that the nation's people has shown in rising to meet any threat which attempts to destroy the rights and freedom of the individual.

The essence of that faith is the belief in the capacity of man, as a rational and humane being, to achieve the good life by rational and humane means.

The fight for independence was for the maintenance of that dignity and the practice of that morality.

This is the story of the Greek fight for independence; the story of the undying spirit of freedom; the story of a people whose history is woven with the golden threads of liberty and democracy and who passed on this

priceless mantle of an enlightened civilization to us.

The Order of AHEPA takes the occasion of this anniversary to pay tribute to the freedom-loving Greek people, who always have—and always will—place paramount to all other virtues the sacred principle of freedom.

## Higher Education

EXTENSION OF REMARKS
OF

## HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. O'NEILL. Mr. Speaker, in these times more and more emphasis is being placed on higher education. More and more has the American public come to realize its importance to the individual, to the community, and to our Nation. For many years now, the Congress of the United States has recognized the urgency of educating more fully the talent of this country to insure trained manpower to meet the growing needs of this Nation. We have extended educational benefits in many ways, through grants, the GI bills, and other means.

Much has been, and is being, said on the subject, and in this connection I wish to bring to the attention of my colleagues the address delivered before the Rotary Club of Boston on Wednesday, March 11, in the Statler-Hilton Hotel, by Dr. Harold C. Case, the president of Boston University.

FINANCING HIGHER EDUCATION

(By Dr. Harold C. Case)

In measuring the positive and negative popular attitudes toward higher education, I believe the balance is overwhelmingly in support of the college and university system. Only occasionally now in this jet age, with automation knocking at the door, and satellites already swinging in an endless orbit around the sun, do you hear a condescension toward academic life—or the use of the terms "egghead" and "braintruster."

There is an uneasy awareness that colleges and universities face a financial crisis of major proportions, and that every family with a son or daughter below college age confronts a mounting dilemma—admission for those children.

Dr. David Henry says: "There is not yet a reasoned comprehension of the problem of higher education. This is partially true because people know that education has always had an imbalance between its aspirations and its realizations; that it has never had enough resource to accomplish all of its mission. Many people feel that the problems in higher education in the years ahead are more of the same.

"In the abstract there is faith in higher education, a feeling for the importance of learning, the necessity of research, an admiration for cultural and esthetic experience, and a passionate demand for the right of qualified youth to an education.

"There is a wide gap, however, between this abstract position and realistic practice."

Walter Lippmann has measured the issue in these words: "Our educational effort * * * has not yet been raised to the plateau of the age we live in. * * * We must measure our educational effort as we do our military effort. That is to say, we must measure it not by what it would be easy and convenient to do, but by what it is necessary to do in order that the Nation may survive and flourish. We have learned that we are quite rich enough to defend ourselves, whatever the cost. We must now learn that we are quite rich enough to educate ourselves as we need to be educated."

We have been making progress toward understanding the need and the role of higher education. The so-called mass media have made an impact on the Nation in telling about the impending college population. The problem, however, is that the essence of higher education is not understood by issuing threats—unless you support the college of your choice—or through anecdote or narrative.

Education is a complicated process—it is a function of life—and its elaboration or improvement depends on larger public understanding.

There are about 20,000 vocations and professions which require some special educational preparation. Note the meaning of this vast need. In 1910 less than one-third of our work force was required to have any considerable educational background. In 1957 one-half needed specialized training. It is estimated that in 1970, 70 percent must have advanced training.

Moreover, survival—the way of freedom to choose—depends on the quality and range of higher education we provide, and the number and competency of those who put themselves under its tutelage.

Our most pressing problem is the recruitment, motivation, training and enriching of our talented citizenship.

Thirty-four percent of our college-age population is now in college. Assuming the continuing increase in interest in attending college (1 percent per year for each of the past 25 years) and the known increase in population soon to apply for admission, we will double our college enrollments in the next 10 years.

If we assume that America will not be willing to divide up what educational service it now has, but that instead, it will find ways to create more educational opportunities, then we can ask ourselves what the problem will be in terms of dollars and human leadership.

What I shall say to you in the remaining minutes is based on the conviction that well educated men and women are the Nation's chief resource, and that we have long since passed the point of choice, we must now develop nationally adequate higher educational programs or we must decline a leading nation of the world.

If we are to lead with strength in the East-West struggle—the strength of our economy, the health of all of our citizens, and the wisdom of many trained people is more essential even than ICBM's.

In spite of the fact that the future of freedom, even of survival, for this Nation, in matters as far apart as satellites of the sun and the management of financial resources, depends on higher education, we now enroll only one-third of our college-age youth in colleges or universities; we spend less than one per cent of the gross national product on education (the total is $3 billion being spent on higher education).

If you would like to know what the cost will probably be, if we are determined to provide quality education for all qualified persons, to provide adequate remuneration to teachers and researchers, to maintain our physical plant, and to construct necessary new physical plant, let me suggest that the best estimates we have are those made by Prof. Seymour Harris of Harvard, who predicts that the costs of higher education in 10 years will be three times their present cost.

We all hoped that the postwar inflationary trend would end. This has not occurred, nor are there any significant prospects of decreasing it now. Taking Boston University, for example: our current budget has exactly doubled in the past eight years, since I began to administer this educational institution, and we have improved our admission standards, and reduced our total enrollment 20 percent in the meantime.

To be sure, this is the era of research, but new knowledge is one of the keys to survival, and important breakthrough in the research laboratory comes high.

New buildings, improved classrooms, laboratories, libraries, student centers, and dormitories are rising, but not enough of them.

We are faced with the problem of doubling our college population by 1969—a decade—and we are increasing our physical facilities now at a rate of about 5 percent, or one-half of the accumulating need, per year.

In manpower, the situation is more grave. We have produced 95,000 additional teachers in the past 10 years. We need 195,000 additional faculty members in the next 10 years.

The true test is whether a nation of free people will respect and support the life of the mind, believing that it is the clue to survival, enough to spend much more on higher education.

We have an important dual higher educational system in this nation: the tax-supported State university on the one hand, and the independent institution on the other; we need both. Larger numbers of students must be enrolled in our State institutions. The independent institutions, on the other hand, are important in the preservation of free inquiry, the setting of standards, the performing of highly specialized tasks in education.

The greatest growth in support must come from former students and alumni. The persons who have experienced the values of higher education must be led to understand their responsibility, prompted to respond more generously than they have in the past.

Parents of students must be brought to understand the true cost of higher education. We have been reluctant to tell the whole truth about educational costs. I do not pretend to know why, but this I do know—higher education is the only commodity that is regularly underpriced.

It is my judgment that we are obligated to tell students and parents how much education costs. The taxpayers of Massachusetts have not the haziest notion how much it costs to educate a student in the State university. They should be told. Far too many of them think that by some magic a State university education is almost free.

In the independent institutions we must decide whether, having told the truth about the costs, we will ask students to bear a larger portion of that total. There are two schools of thought here. One says that we are not really educating an individual, but we are instructing a generation. The other school insists that in our highly individualistic society, we are actually training persons. If so, and this is my belief, as I stand for the best possible total experience for every student, then the individual student and his family should pay the full cost—less the income from endowment, gifts, grants, and the like. Is there any good reason that a student should not believe in himself in terms of the worth of his education as much, at least, as he believes in his car for transportation. Consider that the average college-student debt now stands at $20, while the average family debt for durable goods is $3,000.

Education needs, and must find, a way to secure a larger share of the consumer dollar. Suppose a student borrows the difference between tuition and true costs, and obligates himself during his lifetime, to return to his Alma Mater enough to bring it out whole—the problem of alumni giving is solved, the sense of obligation prevails, instead of an empty idea of benevolence.

Government funds must play a part. They will not solve the problem. But subsidized housing, to the amount of the difference between a 2¾-percent and a 5-percent loan, is not unreasonable. But in crucial areas, electronic physics, solid state physics, upper atmosphere research, food research, medical and nursing education, the well-being of all of the people is of such crucial importance to cause me to stand for direct Federal support for these, and other critical educational interests.

There will be need for a large increase in private funds for education. A start has been made. Very generous support has come from the great foundations. The Ford Foundation set an example in its unprecedented gift to American colleges and universities. Other foundations have given significantly. It is to be hoped that a larger number of gifts for general capital purposes will be available.

Corporate giving on an annual basis is five times as great as it was 10 years ago.

Still, a minority of business industrial concerns have recognized the clear relationships between their success and the quality of college graduates they can recruit.

I bring you no word of consolation today, but of challenge; and if the challenge is met, I predict the best educational results in the world—more well-trained young men and women who have ample know-how, and even better, they will have a value system to which they are committed, and they will know why.

Here, then, is one point of view. Costly as it will be, the best higher education is, in the long run, the lowest cost guarantee of a future we can cherish.

## Four Hundred and Fifty-ninth Troop Carrier Wing Wins Safety Award

EXTENSION OF REMARKS
OF
### HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 3, 1959*

Mr. LANKFORD. Mr. Speaker, it is with considerable pride and pleasure that I call the attention of my colleagues to the fact that the 459th Troop Carrier Wing, the Washington area's Air Force Reserve flying unit, has won the Continental Air Command's Flying Safety Plaque, emblematic of the best flight safety record in the command. A great many men of this wing are residents of Maryland's Fifth Congressional District, which I have the honor of representing in Congress.

Commander of the wing is Brig. Gen. Ramsay D. Potts, Jr., a prominent Washington lawyer in civilian life and one of the country's most decorated airmen in World War II.

The wing, composed of some 1,500 Air Force reservists who come to Andrews 1 weekend a month to train, have flown over 26,000 hours and almost 5 million miles, never having an aircraft accident since their inception in July 1954. For the past several years, the unit has boasted their record as not only the best in the command but in the entire Air Force. The award at least substantiates part of the claim. Air Force records are not refined enough to check their performance against other units.

Giving more luster to the wing's accomplishment is the fact that the Federal aeronautics agency has designated the Washington area as one of the three cities with the highest air traffic density in the Nation, thus posing a hazard to flying training.

The award is made each year to the unit that rates the highest in each of the following four areas: (1) Utilization of assigned aircraft and the amount of flying time performed; (2) the mission of the organization and operational tasks accomplished during the period; (3) all other factors influencing the flying hazards faced by the organization, such as accident proneness of type of aircraft flown, air traffic density, weather conditions and terrain; (4) quality of the unit's accident prevention program.

I know I do not speak for myself alone when I say "congratulations" to General Potts and the men of the 459th wing for attaining this most outstanding flight safety record.

## DAV Services in Iowa

EXTENSION OF REMARKS
OF
### HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. SMITH of Iowa. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Iowa citizens has recently come to my attention. These splendid humanitarian services may not be sufficiently appreciated by many of us or by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Iowa, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited compensated disabled veterans very substantially. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger; its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veteran organization, of full-time, trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans Administration, and in its central office in Washington, D.C. There they have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV maintains two national service officers in Iowa, Charles L. Huber and Buford L. Phillips, located in the VA Center, Valley Bank Building, Des Moines. Mr. Huber also serve as department adjutant and the department commander is Mr. Joe Terrones, Wendell Court No. 2, Waterloo.

The DAV Department of Iowa has nationally appointed representatives to the Veterans' Administration voluntary services advisory committees at each of the Veterans' Administration hospitals servicing Iowa veterans. These DAV representatives and the hospitals are as follows: Mr. Henry J. Luckritz at the 560-bed DOM hospital at Clinton, Mr. Joseph Walsh at the 386-bed general medical hospital at Des Moines, Mr. Robert Hess at the 484-bed general medical hospital at Iowa City, and Mr. R. I. Woody at the 1,540-bed neuropsychiatric hospital at Knoxville.

During the last fiscal year the VA paid out $80,315,000 for its veterans program in Iowa, including $19,811,233 disability compensation to its 24,702 service-disabled veterans. These Federal expenditures in Iowa furnish substantial purchasing power in all communities. Only about 13 percent—3,188—are members of the 37 DAV chapters in Iowa.

This 13-percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Iowa veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

| | |
|---|---|
| Claimants contacted (estimated) | 55,336 |
| Claim folders reviewed | 48,113 |
| Appearances before rating boards | 21,800 |
| Compensation increases obtained | 4,456 |
| Service connections obtained | 1,713 |
| Nonservice pensions | 1,363 |
| Death benefits obtained | 83 |
| Total monetary benefits obtained | $1,856,649.36 |

The above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,35.32, and in the central office they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,369.05. Propor-

tionate additional benefits were thereby obtained for Iowa veterans, their dependents, and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice was furnished to disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guaranty loans for homes, farms, and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting the same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, uses his skill, except in behalf of persons he is sure are worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV actional national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 1.2 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Iowa with a consequent loss to them of about $336,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Iowa to give his power of attorney for this purpose to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent, expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its National Service Officer setup. Moreover, such benefits will generally continue for many years.

Evidently, many claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert National Service Officers primarily because of income from membership dues collected by its local chapters and from the net income of its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 3,747 of whom, during the last 8 years, were Iowa residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially to maintain an expert Service Officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago which concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first Perpetual Rehabilitation Fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member—an excellent objective also for Iowa.

Claimants who have received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Iowa by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member for which the total fee is $100—$50 to those born before January 1, 1902 or World War I veterans—payable in installments within two full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, business organizations, trade associations, and various religious, fraternal and civic associations. All of American's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of Americas' disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

I am proud personally to be a member of the DAV.

---

## The President's Speech on the Berlin Situation

EXTENSION OF REMARKS

OF

### HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. ADAIR. Mr. Speaker, the following editorial from the Berne Witness,

Berne, Ind., expresses the general reaction to the President's speech relating to the Berlin situation. Because I think it does express the sentiment of so many Americans, I include it herewith:

President Eisenhower's address to the Nation Monday night was one of the best ones he has made for some time, we thought. He made it clear to the Russians that the United States will stand firm and will use any measures deemed necessary for the protection of the country. Ike appeared at his best, seemed sure of himself, the speech was well organized, and most Americans who heard him can rest assured that this country is not alseep at the switch but that every defense measure possible is being taken. The President said that the United States would not retreat one inch from its rights and only through firmness on the Berlin problem can the risk of war be minimized.

## Resolutions on Amendments to the National Defense Education Act

EXTENSION OF REMARKS
OF
### HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. WOLF. Mr. Speaker, I commend to the attention of this body two resolutions passed by an overwhelming majority of professors at a great Iowa educational institution, Cornell College. The first resolution calls for the repeal of title X section 1001(f)(1) of the National Defense Education Act of 1958: the so-called loyalty oath section. This section is, of course, one more carryover from the McCarthy era. I hope, however, that we are sufficiently removed from that period in our history so that we are able to judge the question of loyalty in more meaningful terms than it has been judged in the past. Consequently, I hope that we shall prevent the passage of any dubious meaning, ill-conceived or anti-democratic legislation on this subject, and foster the repeal of this kind of legislation that Congress might have passed in the last few years. The second resolution calls for an amendment to the National Defense Education Act which will make teachers and counselors in private schools and colleges eligible for the same benefits as those who teach in the public schools:

RESOLUTIONS ON AMENDMENTS TO THE NATIONAL DEFENSE EDUCATION ACT

The Cornell College faculty, both teaching and administrative members, approved the folowing two resolutions at an official faculty meeting on March 16, 1959:

"I

"The Cornell College faculty calls upon the 86th Congress to repeal title X, section 1001(f)(1) of the National Defense Education Act of 1958. This section reads:

"'No * * * funds * * * shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods.'

"Our reasons for opposing the requirement of such a disclaimer statement are as follows:

"1. On grounds of principle, it is a violation of the American tradition of freedom of thought since it makes an individual's opportunity for educational assistance contingent upon his beliefs. It is also self-defeating in that a person momentarily seduced by antidemocratic ideologies is more likely to discover their fallacies through more rather than less education. We uphold the basic soundness of Thomas Jefferson's famous statement: 'If there be any among us who would wish to dissolve this Union or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it.'

"2. On grounds of utility, such an oath is totally ineffective, simply one more ribbon of redtape powerless to sustain our national security. Dedicated subversives who have already exposed themselves to the major charges of treason or sedition will not hesitate to take such an oath, with its relatively minor risk of perjury. Past experience has repeatedly demonstrated that the persons who refuse such a disclaimer statement are mainly idealists who sacrifice themselves to protest what they consider a violation of the Bill of Rights.

"3. On purely legal grounds, this vaguely worded oath, which is required under the criminal penalties of perjury, violates the legal principle that criminal statutes shall punish actions rather than beliefs, and shall define the proscribed actions in unmistakable terms. The law does not specify the organizations in which membership is proscribed, nor any procedure for specifying them. Neither does the law define what constitutes support of such an organization, which could include a mere defense of its right to be heard. Again, the law does not provide any test by which a member can know when the organization is using illegal or unconstitutional methods for bringing about a change in the government of the day. This broad wording could be made to extend to a member of a corporation or labor union which contributed financially to the Democratic or Republican Party or a candidate, in violation of the Taft-Hartley Act. Finally, this law could be used to expose to malicious and harassing investigation and prejury prosecution persons whose later utterances might be construed as retrospective evidence of previous false swearing. Such a threat can only intimidate the free inquiry and expression on which a vigorous democracy depends for its vitality.

"4. On grounds of public policy, this disclaimer oath directly contradicts our attempts to bring our best minds into teaching to offset Soviet educational and scientific gains. At the very time we are trying to raise the status, prestige, and income of the teaching profession, we single out its present and potential members as a target for popular suspicion. We require of them an oath which is seldom required of other groups receiving Federal assistance, or of other members of the general population. Such oaths reinforce the growing tendency of college students to avoid all independent thinking and discussion about values and goals for fear of some day being suspected of harboring beliefs disloyal to their country. This policy is worse than discriminatory and unfair. It is foolish and self-defeating.

"II

"The Cornell College faculty calls upon the 86th Congress of the United States to amend the National Defense Education Act in such a way that teachers and counselors in private schools and colleges be made eligible for the same benefits as those in public schools.

"Title II, section 205(b)(3) provides that up to 50 percent of loans made to undergraduate and graduate students in institutions of higher education shall be canceled for service as a full-time teacher in a public elementary or secondary school, at the rate of 10 percent for each year of such service. We strongly urge that this forgiveness feature be extended to teachers in private elementary and secondary schools, and to teachers in both private and public institutions of higher learning.

"It seems quite obvious that teachers in colleges and universities and in private elementary and secondary schools are rendering as much service to society as teachers in public elementary and secondary schools. In terms of economic need it is often the case that the teachers in private institutions need this relief even more than those in public institutions. The national interest requires that we recruit teachers for education at every level and in both public and private institutions.

"The same kind of amendment is recommended in title V, part B, section 511, which provides stipends for individuals 'engaged, or preparing to engage, in counseling and guidance in a public secondary school. * * *' We urge that such stipends be made available on the same basis to persons engaged, or preparing to engage in counseling and guidance in a private nonprofit secondary school."

## Telegram Regarding Puerto Rican Legislation

EXTENSION OF REMARKS
OF
### HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. BOW. Mr. Speaker, under leave to extend my remarks I enclose a telegram I have received from Hon. Miguel A. Garcia Mendez, a senator of the Legislature of Puerto Rico, and Luis A. Ferre, a member of the House of Representatives of Puerto Rico:

SAN JUAN, P.R., *March 24, 1959.*

Hon. FRANK BOW,
*House of Representatives,*
*Washington, D.C.:*

We oppose Resident Commissioner FERNÓS' bill to repeal law of Federal relations with Puerto Rico because said approach will surely increase the tremendous confusion he and his party have created trying to convince the people of Puerto Rico that we are no longer a Territory under the sovereignty of the United States and that Congress has no power to approve rules and regulations under article IV, section 3, clause 2, of the Federal Constitution. FERNÓS' bill is ignoring the interpretation given by Members of House and Senate to Public Law 600 of the 81st Congress and Public Law 447 of the 82d Congress. His proposal is an open violation of amendment included by Congress in article VII, section 3, of Puerto Rican Constitution as condition to its approval and incompatible with the very foundation of the power delegated to Congress by the Constitution, which power Congress cannot relinquish.

FERNÓS is also asking Congress to withdraw from Puerto Rico all Federal agencies which means withdrawing of U.S. sovereignty from Puerto Rico. Present government in power has no mandate on subject of status because at no time has this matter been submitted to referendum of the people, and it is the duty to guarantee the right of self-determination of the two and a half million American citizens of Puerto Rico through referendum. FERNÓS' bill is a hoax to which

Congress should not be a party. We resent, as loyal American citizens, such an attitude against the sincere permanent union, not association, based equal rights and obligations, and not second-class citizenship in the relations of our Nation with Puero Rico.

Respectfully,

MIGUEL A. GARCIA MENDEZ.
LUIS A. FERRE.

## Helping the Family Farmer Help Himself

EXTENSION OF REMARKS
OF

## HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. JOHNSON of Wisconsin. Mr. Speaker, when the delegates to the National Farmers Union annual convention met in Springfield, Ill., this month, they adopted a policy program designed to improve and sustain the family farm. They noted that farmers need to develop and operate a wide variety of private and public programs to obtain equality of bargaining power in the commodity and credit markets of the Nation and the world. Under leave to extend my remarks, I would like to include an outline of the National Farmers Union commodity income improvement program in the RECORD:

FULL PARITY INCOME FOR FAMILY-FARM OPERATORS THROUGH BARGAINING POWER

We shall support Federal and State legislation and local laws and policies to improve and sustain the family farm. A family farm is an agricultural production unit that can be efficiently operated by a typical full time farm operator family that furnishes most of its own labor. Our Nation should move rapidly away from absentee ownership of farms and industrial-type farm operation. We shall continue to oppose by all means at our disposal the trend toward vertical integration controlled by off-farm interests. We shall particularly emphasize positive efforts of family farmers to obtain greater control over the financing and management of the processing and marketing of farm commodities.

Farmers do not now have fair bargaining power under the existing market structure. Lack of bargaining power makes it impossible for farmers to earn and receive a fair share of national income. Farmers need to develop and operate a wide variety of private and public programs to obtain an equality of bargaining power in the commodity and credit markets of the Nation and the world.

However, we see no practical possibility for family farmers to acquire all the bargaining power required to earn and receive a parity of income except through authorization and positive programs of the Federal Government.

FARM COMMODITY INCOME IMPROVEMENT PROGRAMS

Farmers must obtain control over the supply, marketing, and pricing of their commodities. We favor establishment of a comprehensive system of commodity programs based upon managed abundance. Existing Federal farm programs and policies have placed American farmers in an unfair economic position in relation to other forces and segments of the national economy. They are inadequate because they fail to meet the central fact of modern farming—the enormous capacity to produce due to modern farm technology. Existing farm income programs are not geared to the revolutionary changes in farm production and food distribution, processing, and merchandising. Existing farm programs are not properly adjusted to the modern position of the United States in world affairs and world trade. Food can be used to promote the peace.

The existing wrongful farm policies are based on a doctrinaire belief in the illogical and incorrect philosophy of fully flexible farm prices in unregulated and unprotected markets. The consequence of this is suffered not only by those who till the soil and tend the herds and flocks but by the entire Nation. Under programs based upon this false philosophy of fully flexible sliding scales of price support, not only have farm prices dropped, but farm family income has fallen drastically. Government costs of the farm programs have soared and retail prices of food have risen.

Businessmen, utilizing their rights under the 14th amendment, have organized great corporations with limited liability which gave them enormous power in the market place. Members of labor unions have brought about the passage of laws which protected them in their collective bargaining rights. Minimum wages, maximum hours legislation, workmen's compensation laws also were enacted which protected working people.

Farmers today, in the exercise of their bargaining power, find themselves somewhat in the position labor and business was a hundred years ago. Farmers in many instances are forced by economic necessity to mine their soil and they find themselves where they cannot effectively bargain in the market place.

Unlike businessmen and labor in industry and commerce, farmers have not yet obtained from the Government legislation to permit similar use of bargaining power except for immunity from antitrust laws for cooperative buying and selling. Unlike business and labor programs, farm programs are largely Government expenditure programs which require that a large proportion of farm family net income be dependent upon periodic congressional appropriations. Under existing Federal farm policies, farm income continues to fall; retail prices of food continue to rise; and Government expenditures for farm programs continue to soar. With a further 10 percent drop in farm income predicted for 1959, Government expenditures for the Department of Agriculture threaten to reach the historic record high level of more than two-thirds of farm family net income of the Nation.

Farmers must have enabling legislation to get needed bargaining power. We are asking Congress for nothing more than was long ago legally given to business and industry and has partially been granted to labor. The program must provide safeguards to assure an adequate supply of food and clothing. Consumers, small businessmen, and labor, we believe, will support adequate farm programs when they realize that their interests have been considered and protected and that farm families are entitled to the same economic rights provided under law to other groups.

These bargaining power tools should be assured to farmers administering their own programs through a system of elected farmer committees and boards. We are asking the Government help through enabling legislation and by technical help and guidance. It is our belief and intention that such a program shall operate during periods of full employment without net cost to the Federal Treasury. However, we firmly believe that to provide consumers price level stability, the Government make such appropriations as are necessary.

Farm gate regulation of marketings, we are convinced, is practicable, effective, and completely consistent with the principles of democratic freedom and free enterprise. Farmers are ready, willing, able, and eager to accept the responsibility and the individual and cooperative self-discipline required to regulate their marketings and curb wasteful production. Farmers have demonstrated in many referendums that they are prepared to adopt and operate such measures provided the rewards are commensurate with the sacrifices.

We urge the adoption of a comprehensive system of commodity programs that will provide for (1) administered farm prices to be set yearly, within limits prescribed by Congress as being fair to both farmers and consumers, by a national farm income improvement board made up of a majority of farmers with consumer and business representatives; (2) production and marketings based on national need including domestic and export requirements in accordance with production and marketing goals based on bushels, pounds, and bales sufficient for domestic and export use at prices that will enable farmers to earn and receive a parity of income; (3) the Board to decide what is the national need for farm products, domestically and for export for dollar sales without subsidies with the additional amounts that are required by the Government to carry out domestic welfare and foreign policies of the United States to be paid for by the general public out of the general funds of the Federal Treasury and not be charged to the farm programs.

For each 1 percent that farmers are allowed to regulate, the volume of domestic market supply of the total market basket of farm food commodities, this will favorably regulate the price at the farm gate by at least 10 percent and thereby favorably affect farm operator family net income by at least 25 percent. Farmers want and deserve the right to improve their incomes by regulating market supply through either holding the excess volume off the market or by mandatory donation of it to augment the food supply of starving millions in other lands when workable international food relief agencies are set up. Farmers Union is not interested in quibbling over words or details. Our interest is to cooperate with any who wish to join with us in developing programs of action to immediately raise farm income. We shall continue to support all such proposals and efforts.

COMMODITY COVERAGE

Such programs should be developed for all commodities when producers are willing to adopt and enforce effective measures to keep market supplies in balance with demand. Each commodity program should be adapted to the unique needs and problems of the producers of each commodity. When several commodities are closely related, such as feed, forage, and livestock, they should be handled within an integrated commodity group program.

FARM PRICE AND INCOME GOALS

The primary objectives of farm income improvement programs should be an income of family farmers from their labor, capital investment, risk, and management comparable to and at a parity with the return for those factors in other segments of the national economy. We shall continue to urge the most rapid possible progress toward rising farm-gate prices and farm family income to the parity level. The concept of income parity in Federal farm legislation should be preserved as the major measuring stick of the program. We do not view the parity goal as a special favor or privilege for farmer people. Moreover, we shall oppose the use of bargaining power programs for profiteering at the expense of the consumer by raising administered prices above the parity income equivalent level.

METHODS

All of the several commodity and related programs, if the entire program is not enacted as permanent legislation, should be scheduled to expire at the same time.

We shall support adoption and use of workable combinations of farm commodity income improvement methods such as: loans, purchase agreements, market surplus diversion purchases, parity income deficiency payments direct to farmers, regulation of imports, export incentive payments, stabilization operations by farmers and by Government, marketing agreements and orders, feed grain production controls, other farmers' bargaining devices, marketing premium payments for sale of livestock at desirable weights, other types of marketing premium payments and compliance deposits designed to keep supplies in balance with demand, marketing standards and scheduling, and a system of marketing quotas for all commodities as a whole, for groups of related commodities, and for individual commodities, as needed.

Market diversion and stabilization programs and similar activities by farmers and by Government should be used to insure orderly marketing, eliminate unreasonable seasonal fluctuations in market prices, and to prevent disruption of the programs by speculation and profiteering.

Authority to make use of marketing orders and quotas should be authorized for producers of all commodities.

## The Second Supplemental Appropriation Bill

SPEECH
OF
### HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 5916) making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes.

Mr. MONAGAN. Mr. Chairman, I am glad to support the second supplemental appropriation bill for 1959—H.R. 5916—in its amended form.

I believe that the House has approached this bill in a spirit which combines an interest in needed programs with a desire to keep appropriations within reasonable bounds.

It is worthy of note that the Committee on Appropriations reduced the recommendations of the Bureau of the Budget by $385,432,032 and even with the amendments passed by the House the final appropriations will be approximately $208 million below the budget.

I am happy to support the restoration of $100 million to the Development Loan Fund. Even though there are five other agencies supplying money in whole or in part for economic development abroad and in spite of the fact that we are currently receiving reports of discouraging mismanagement in our foreign assistance programs, nevertheless, I feel that the main objectives of these programs are valid. I feel that our administration of these programs is improving and I believe that our security and the stability of our friends throughout the world require that they be continued.

This does not mean that we should not keep these programs continually under observation. It is our duty to do this because of the amounts involved and because of the constant danger that their objectives will not be realized because of faulty administration. In our present status of international tension, however, I am sure that this is not a time to abolish these programs.

## A Program for Action

EXTENSION OF REMARKS
OF
### HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the text of a resolution adopted by some 400 members of the Trade Union Council of the Liberal Party of New York. The council is comprised of 225 union locals with a total membership of a half million workers. Mr. Charles S. Zimmerman, the noted labor leader, is chairman of the council.

These people from the ranks of labor are very much concerned over the lasting unemployment situation and other economic problems which are plaguing the country at this time. They advocate a program of action which deserves the serious attention of the Congress. The text of the resolution is as follows:

RESOLUTION OF THE TRADE UNION COUNCIL OF THE LIBERAL PARTY

The country finds itself in an economic situation that has no precedent. Business is improving, profits are rising, yet high unemployment persists and shows signs of becoming permanent. Growing productivity and growing disemployment are moving together.

At a time that calls for bold and far-reaching action, the policies of the Eisenhower administration and the measures taken by Congress actually constitute a retreat from the serious problem with which the Nation is confronted. In New York State, the Rockefeller administration and the legislature are likewise marked by an unwillingness or inability to meet the economic realities.

The extension of the temporary unemployment insurance program for only 3 months reveals, in itself, the tragic inadequacy of our National Government to cope with this blight on the country's economic health. This is especially evident when it is realized that fully one-third of the $665 million appropriated for the emergency program still lies undistributed while the jobless go hungry. Furthermore, the extension will afford even this limited assistance to less than one-tenth of the country's unemployed.

Despite all the smooth assurances from the President and his economicts that the recession is over, the Trade Union Council of the Liberal Party declares that the recession will not be over until unemployment disappears, and that our country can have no full economic strength without full employment.

We call for action. We call on the National Government and on the State government to put into immediate effect such measures that will give jobs to the unemployed, such provisions that will make American families economically self-sufficient, and such long-range plans which will overcome the contradictions that plague our economic growth.

We call for the immediate institution of the 35-hour week on a national basis.

We call for the immediate establishment of a minimum wage of $1.25 per hour extended to all workers.

We call for immediate passage of a depressed-areas law, seeking to abolish pockets of unemployment, as well as economically blighted areas.

We call for increased unemployment insurance benefits, extended duration periods, more reasonable eligibility requirements, and broader coverage—on both National and State levels.

We call for tax relief for low-income and middle-income families. We believe, with organized labor, there must be an increase in the income-tax exemptions.

We call for the plugging of loopholes through which large corporations and combines escape their fair tax obligations.

We call for substantial reduction of the depreciation allowances in the extractive industries.

We call for the inclusion on the Federal Reserve Board of a member representing labor.

Finally, we call for the establishment of a National Economic Council composed of labor, management, farmers, scientists, technicians, the professions, and consumers, charged with planning and executing a democratic program for achieving economic security, prosperity, and ever-improving standards of living.

## The Candid Witness

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interesting article on fair trade:

THE CANDID WITNESS

The other day we ran across some testimony before Congress about the proposed Federal fair-trade law that mystified us.

Mr. Maurice Mermey, director of the National Association of Retail Druggists, long the drumbeaters for fair trade's price fixing features, told the House Commerce Committee that reliable surveys showed that consumers in non-fair-trade areas paid just about the same prices consumers paid in areas where fair trade had fixed prices.

This was mystifying because, first, it ran counter to the experience of many people, and second, because if prices were about the same in non-fair-trade areas as they were in fair-trade areas, then obviously fair trade didn't even benefit those manufacturers and retailers who like to keep prices stable—and high.

But the mystery was cleared up for us by testimony yesterday of a spokesman for the Department of Justice, who appeared in opposition to the Federal fair-trade law. Apparently it all depends on what survey a person relies upon, and Mr. Robert A. Bicks,

the first assistant in the Antitrust Division, relies on a Department of Justice survey comparing fair-trade prices to prices in non-fair-trade areas.

Now, what did the Government survey show? Well, out of 132 items picked at random, an average of 119 were available in each of 8 cities not covered by fair trade laws. Of these 119 items, 77 on the average sold below the fair trade prices fixed for other areas.

Thus consumers in the 8 city non-fair-trade trade area purchasing these 77 items could effect savings of 27 percent below their fair trade value.

The savings varied from item to item and city to city. People in Washington, D.C., for example, could buy 121 items below their fair trade prices and save 32 percent. Kansas City had 73 items available at 31 percent below fair trade prices; Dallas, 99 items at a saving of 24 percent. And so on.

Now this survey appears to us to be more realistic than those of the druggists that showed no difference in costs to the consumer. Fair trade, in fact, is designed to keep costs high by discouraging price competition. So it doesn't help the consumer one bit. And the antitrust laws—from which the price fixed fair trade items would be exempt under the proposed Federal law blanketing the Nation—were enacted to protect the consumer, who is the public, by outlawing price fixing that prevents competition.

The public ought to be glad that Government agencies like the Federal Trade Commission and the Department of Justice are opposing this proposed nationwide cartel system, and we'd suggest the public can best show its appreciation and serve its own interests by writing Congressmen to vote this oppressive measure down.

For it will be oppressive, if the fair traders get what they actually seek. And the public should be grateful, too, for the testimony of one proponent of a Federal fair trade law before the House Commerce Committee.

For this supporter of fair trade, Mr. Edward Wimmer, of the National Federation of Independent Business, was candid enough to tell the Congress that if the Federal law is enacted: "There will not be any price competition, and there should not be."

## J. Edgar Hoover

EXTENSION OF REMARKS
OF
### HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. DADDARIO. Mr. Speaker, the following resolution in support of the Federal Bureau of Investigation and J. Edgar Hoover, who are under attack in a vicious smear campaign, was unanimously passed by the Connecticut Chiefs of Police Association at their regular meeting at Berlin, Conn., on March 19, 1959:

Whereas the leadership in coordinating the effort of all law enforcement in the country and the high ideals and standards for law enforcement as expressed and practiced by the Honorable J. Edgar Hoover, Director, Federal Bureau of Investigation; and

Whereas J. Edgar Hoover and the agents of the FBI under his direction have constantly strived to raise the standards of law enforcement to a professional level; and

Whereas recently there has been an insidious smear campaign attacking the good name and character of J. Edgar Hoover by those who would tear asunder the high principles of law enforcement exercised by J. Edgar Hoover in our great democracy: Be it

*Resolved*, That we, the members of the Connecticut Chiefs of Police, assembled at this meeting at Berlin, Conn., March 19, 1959, express to Mr. Hoover our continued appreciation and support for his high ideals established for law enforcement; for his efforts in developing police standards and to express the high esteem in which he is held as a man of great utmost personal integrity.

## Lew Wood of South Bend, Ind., Wins CBS Scholarship

EXTENSION OF REMARKS
OF
### HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. BRADEMAS. Mr. Speaker, the Columbia Broadcasting System has in the last 3 years sponsored a program for promising persons in the field of radio and television journalism.

I am very pleased to include in the CONGRESSIONAL RECORD an article from the South Bend Tribune announcing the award of one of the CBS Foundation News and Public Affairs Fellowships for 1959–60 to Lew Wood, a newscaster for WSBT–TV and WSBT, stations of the South Bend Tribune.

Mr. Wood is an extremely able young man who will have the opportunity to study for 1 year at Columbia University under this program.

The article follows:

LEW WOOD WINS CBS SCHOLARSHIP

[From the South Bend Tribune, Mar. 23, 1959]

Lew Wood, newscaster for WSBT–TV and WSBT, the Tribune's stations, is one of eight newsmen from six States and England to win a 1959–60 CBS Foundation News and Public Affairs Fellowship at Columbia University, it was announced today by Ralph F. Colin, president of CBS Foundation, Inc.

The eight newsmen will form the third annual group of CBS fellows to undertake a year of study and discussion at Columbia University, New York City, to broaden and strengthen their backgrounds for meeting their growing responsibilities in electronic journalism.

The program was inaugurated in 1957 for men and women who show promise of greater development and who seem most likely to benefit from the study year provided.

GRADUATE OF PURDUE

Wood, 30, a radio-TV speech graduate of Purdue University, joined the WSBT news staff in 1953. He recently was awarded a master's degree in Soviet studies by the University of Notre Dame, and is currently studying the Russian language at the Indiana University Center in South Bend.

Before he joined the Tribune organization, Wood worked for WBAA, the Purdue educational radio station, and WDZ, Decatur, Ill. He served with the U.S. Marine Corps during the Korean conflict and holds a captain's commission in the Marine Corps Reserve.

He and his wife, Katherine, and three children live at 1225 Academy Place.

Nearly 300 applications, from nearly every State and from new posts in several foreign countries, have been received by the CBS Foundation in the 3 years of the fellowship program.

The selecting committee for the 1959–60 fellowships was headed by Dr. John A. Krout, vice-president of Columbia University.

Other members of the committee are Lewis W. Douglas, chairman of the Board of Mutual Life Insurance Co. of New York and former American ambassador to Great Britain; Joseph E. Johnson, president of the Carnegie Endowment for International Peace; Byron Prise, former executive news editor of the Associated Press and assistant secretary-general of the United Nations; Dr. Lawton P. G. Peckham, dean of the graduate facilities, Columbia; Sig Mickelson, vice-president of CBS Inc. and general manager of CBS News, and Edward R. Murrow, news and public affairs broadcaster.

Applications are invited each year from news and public affairs staff employees of CBS News, CBS-owned stations, independent stations affiliated with the CBS radio and CBS television networks, and noncommercial educational stations, and also from teachers of courses in news and public affairs techniques in colleges and universities.

The eight fellowships average approximately $8,000 apiece and are designed to cover tuition and other costs at Columbia University and necessary transportation and living costs for each fellow and any family dependents for the fellowship year of 36 weeks.

In a manner similar to the Nieman fellowships at Harvard, which since 1938 have provided additional educational opportunities for newspapermen, the CBS Foundation fellowships make it possible for promising persons in radio and television journalism to draw on a wide range of course of study.

The courses would not, according to the foundation, be limited to any general field. They might range across such varied fields as diplomatic history, economics, modern languages, Far Eastern affairs, political science, labor relations, and nuclear science.

Due to international conditions and the prominent position Russia holds in the news, Wood expects to continue his work in the field of Soviet studies.

Special seminars, dinners, and other meetings at Columbia University and at CBS are also a part of the program so that the fellows can find both formal opportunities to build up their knowledge of particular subjects and at the same time, increase their understanding of the potentialities of radio and television as media for news and public affairs programing.

The other seven recipients of the 1959–60 CBS fellowships are:

Marvin L. Kalb, reporter-contact, CBS News, New York.

John Merriman, news editor, CBS News, New York.

Barry R. Nemcoff, television news editor, Station WCAU–TV, Philadelphia.

Charles V. North, television news director, Station KGGM–TV, Albuquerque, N. Mex.

Charles R. Reeves, news director, Station WWVA, Wheeling, W. Va.

Jack D. Summerfield, assistant general manager, Station WGBH FM–TV, Cambridge, Mass.

John A. G. Tiffin, CBS News, London, England.

The eight newsmen are expected to begin their graduate studies at Columbia sometime this September.

## Recommendations of National Farmers Union

EXTENSION OF REMARKS

OF

## HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. JOHNSON of Wisconsin. Mr. Speaker, the National Farmers Union has adopted a set of recommendations on such important subjects as family farm credit, a national safety reserve of food and fiber, public accounting of U.S. Department of Agriculture expenditures, and investigation of market spreads. Under leave to extend my remarks, I would like to include these recommendations in the RECORD:

NATIONAL FARMERS UNION RECOMMENDATIONS

ADAPTED FAMILY FARM CREDIT

We shall continue our efforts to strengthen the services and resources of the cooperative institutions of the Farm Credit Administration. We will continue to help expand and strengthen credit unions in rural areas. In addition, we urge enactment of legislation to expand the funds and authorities of Farmers Home Administration. This agency should be transformed into a complete yardstick family farm loan institution. Family farm operators should be able to turn to this agency to obtain fully adequate credit adapted to family farm needs and problems when such credit cannot be obtained from established private sources of rates of interest and on terms commensurate with the earning power of farm investment.

EXPAND CONSUMPTION

All areas of expanding demand for farm commodities, consistent with good soil conservation practice, should be explored exhaustively before we concern ourselves with production restrictions; our first concern is that no person lacks the food needed for adequate nutrition. Therefore, we urge enactment and establishment of a national food allotment stamp plan; a Federal school lunch and fluid milk program in every nonprofit school, summer camp, and day nursery; adequate nutritional standards in public institutions; Federal credit to encourage the establishment of efficient terminal markets for perishable farm produce; expanded nutritional research and education programs; and all other workable methods needed to close the gap between that persons can afford to pay for the volume of food and fiber products and what they need to maintain an adequate standard of nutrition and well-being.

Additional emphasis should be given to Federal programs to promote greater industrial use of farm commodities not needed for food at prices consistent with full parity income for farmers. We urge adoption of an immediate and adequate program for continuing research aimed at expanded practical industrial and other new uses of agricultural products. We further recommend reactivation and pilot experimental operation of presently owned Government facilities, including grain alcohol and synthetic rubber plants. Satisfying the true need of this Nation's citizens for farm commodities is a truly national program, not one to be accomplished at the expense of farm family income.

NATIONAL SAFETY RESERVE

An adequately decentralized national safety reserve of food and fiber of a sufficient volume and quantity completely adequate to national security, safety, and welfare should be established so as to be completely isolated from the market. The commodities should be owned by the appropriate agency under the Strategic and Critical Materials Stockpiling Act.

FEDERAL CROP AND LIVESTOCK INSURANCE

The Federal crop insurance program should be improved and expanded until it is available to farmers in every county in the United States and to all crops. Need for livestock death insurance against hazards not covered by existing insurance companies at reasonable costs should be explored and experimental programs initiated where needed. Administrative and experimental costs should be paid from appropriations, and losses should be paid from premiums by policyholders, with Congress to appropriate sufficient funds to cover unusual losses in disaster areas. Both multiple and single crop policies should be available in all counties. The extent to which any farm operator may participate in Federal crop and livestock insurance programs should be limited to maximum family farm production.

TIMBER PRICE REPORTS

An adequate reporting system should be established by the U.S. Department of Agriculture for farm timber products, covering price, supply and demand.

ADMINISTRATION BY FARMER COMMITTEES

Legislation should be enacted to require that all Federal farm income-stabilization and direct credit programs be administered by democratically elected community, county and State committees of farmers. The reduction of such committees to a merely advisory capacity should be prohibited by law. At the national level, in the U.S. Department of Agriculture, these programs should be administered by a Federal farm income improvement board or boards composed entirely of farm operators, at least a majority of whom were democratically elected by farmers. The technical assistance program for soil and water conservation on individual farms and small watersheds should continue to be operated through strengthened and improved local soil conservation districts, governed by democratically elected boards composed of farmers.

PUBLIC ACCOUNTING OF USDA EXPENDITURES

Continued publicizing of Department of Agriculture expenditures as items chargeable directly to farm price supports is a disservice to agriculture and creates consumer antagonism toward adequate farm legislation.

We call for an honest and fair public accounting of Department of Agriculture expenditures with full publicity for all allocation not directly connected with farm income improvements.

INVESTIGATION OF MARKET SPREADS

Sufficient funds should be appropriated by Congress to inaugurate and provide for a continuous congressional investigation into the widening spread between prices received by farmers and those paid by consumers and the results of such investigations publicized through reports prepared and released as public information by the Congress. If necessary to control these spreads, regulatory measures of the Interstate Commerce Commission-type should be instituted. Additional means of exercising Federal regulation or yardstick operation where needed to supplement farmer-owned processing and marketing enterprises should be initiated.

RESEARCH, PROTECTIVE AND MARKET SERVICES

Congress should enact increased appropriations to expand and improve the marketing services, agricultural information, protective operations, regulations of commodity exchanges, and research services of the U.S. Department of Agriculture. Particular emphasis should be placed upon improving the volume and quality of service to family farms, expansion and extension of the cattle tuberculosis and brucellosis indemnity program, and provisions for adequate Federal inspection and grading of perishable farm produce at terminal markets. We continue to support legislation to set up nationwide grade labeling for potatoes and purity, quality and sanitation standards for milk. Emphasis should be shifted from production research to research designed specifically to solve the problems of falling farm income such as how to strengthen farmers' bargaining power, expand farmers' cooperative, reduce farm to retail marketing margins, increase efficiency of farm commodity processing, increase effectiveness of merchandising and packaging for farm products, expand markets, expand industrial uses, appropriate farm production and supply adjustments and similar types of scientific studies. We also urge expansion and strengthening of the Food and Drug Administration to more adequately protect the public against radiation and injurious chemicals. Legislation should be enacted to require grade and content labeling of food and other processed farm products and at chemicals at the retail level.

SPECIAL LOW-INCOME FAMILY FARM PROGRAM

Congress should enact family farm development legislation required to provide needed Federal services and activities to provide opportunity and to enable particularly low-income farm families in chronically depressed rural areas to establish themselves upon a wholly adequate economic basis.

CONSOLIDATED HOUSING OF FARM AGENCIES

Federal farm agencies in each county should be housed in the same building. The public works shelf recommended in section IV should include projects to erect such buildings.

CONSERVATION AND LAND- AND WATER-USE PLANNING

Expansion and continued improvement of programs is needed in the field of agricultural soil, water, and related farm-resources conservation; soil surveys; soil-conservation research; tree-seedling nurseries; reforestation; and cover-crop seed-supply expansion activities of Federal and State governments. Particular attention should be given to the development and implementation of a comprehensive and coordinated nationwide policy and program to meet the problems of growing water shortage for farm, power, recreation, navigation, industrial, and urban users.

More rapid expansion of scientific land- and water-use plans based on soil classification should be made. These plans, land capability maps, and classifications serve as useful guides to private individual action. When related to governmental farm programs, such regulations should be drawn with full regard for the traditional protection provided by the Constitution for unmolested continuation of nonconforming uses. Within this framework, each acre of farmland should be used within its capabilities and treated in accordance with its needs for protection and improvement. Each farmer and rancher should have conveniently available to him fully competent federally financed technical assistance and cost-sharing programs needed by him to help him to develop and put into operation his own technically sound conservation plan for the soil and water resources upon which his family's livelihood and the Nation's long-term security depend.

When land is needed for development or expansion of military establishments, urban expansion, and highways, unoccupied areas unfit for farm and ranch production should be acquired rather than good farm or grazing land, unless absolutely contrary to strategic necessity and public safety.

Sales of agricultural land by the Government should be made only to owner-operated families with the size of farms fully consistent with other family operated farms in the vicinity.

## Who Does a Congressman's Work?

EXTENSION OF REMARKS
OF
### CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 19, 1959*

Mr. HOFFMAN of Michigan. Mr. Speaker, certainly the Congressman does not do all of it. The workload varies with the district, depending not only upon the number of people in the district—from 159,099 to 806,701—but upon the characteristics of those who live within the district—their nationality, the kind of activities in which they are interested and engaged, the varied interests in local and national affairs, upon many, many things.

Every congressional office must have at least one—sometimes several—expert stenographers and typists. There must be assistants who can keep up with the news, determine, digest and classify that which is worthwhile. There must be someone who can file not only correspondence but the result of the research, and file it where it can be instantly located when wanted. There must be someone to meet lobbyists, casual visitors, and friends, someone whose temper cannot be ruffled, who always has a smile and a kind word. There must be someone who keeps track of proposed legislation, probable amendments, and its possible effect, if enacted. Contact must be maintained with other Members, both those favorable and those who are opposed to the thinking of the Congressman. In one way or another, someone must maintain contact not only with the desires but with the economic and political philosophy of constituents. Someone must watch the Committee and House Calendars, know when hearings will be held, legislation discussed or acted upon.

Do I hear your query, "If all these things are competently done for the Congressman, what in the world does he do, if anything?" Well, he does some of everything. With two thoughts ever in his mind, first, "What do his people want?" and second, "What is the right thing to do?"—having in mind the welfare of the country as a whole he tries to evaluate all that comes to his attention, then do the things which he believes will best serve his people and their interests.

Now for the question as to how your Representative—I prefer the term "hired man"—can get a worthwhile job done. Here is one answer. He is given a stated sum each year to hire assistants, limited at present to eight.

I have been able for a little over 24 years to get along without—except in 2 or 3 instances—spending all the money available for clerk hire, and then only for 2 or 3 months when the necessity arose because of illness in the office. Never have I had eight.

In all that period, there have been just 5 months when there were on my payroll two in-laws—one was on for a longer period. For their employment I have no apologies, for they have been competent.

It would be difficult to find anyone employed by me either now or during the past 40 years I have maintained an office who did not earn every dollar paid. Probably, there have always been legislators and executives who have employed relatives and overpaid them.

Relatives employed by Congressmen have usually rendered competent service, earned what they were paid. Two conspicuous examples are Jack Garner, former Congressman and Speaker of the House, later Vice President, whose wife was his assistant before he was elected and until he refused to longer accept office.

A present example is the Democratic leader of the Senate, LYNDON JOHNSON, whose brother is on the payroll and who earns all he receives.

The long and the short of it is that no one, for either moral or legal reasons, is required to discriminate because of relationship. If a Congressman cannot be trusted to properly and efficiently use the sums provided for the carrying out of his official duties, do a good job, he should be defeated.

## The Draper Committee Report

EXTENSION OF REMARKS
OF
### HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Christian Science Monitor, Boston, Mass., of March 19, 1959, entitled "The Draper Committee Report":

THE DRAPER COMMITTEE REPORT

It should be understood that the report made by President Eisenhower's special Committee to study the U.S. military assistance program is preliminary rather than a final product. The final report should be even broader in scope.

As matters stand, the committee has sounded a warning against cutting or even leaving at present levels the rate of military assistance to America's allies overseas. The judgment is a unanimous one from a panel of 10 experts, headed by William H. Draper, Jr., former Assistant Secretary of the Army, and including General Gruenther, Admiral Radford, two former directors of the budget, and a former high commissioner for West Germany.

The problem to which the panel first addresses itself reflects a situation described to the House of Representatives Foreign Affairs Committee by Under Secretary of State Dillon. To plan for, to manufacture, and to deliver modern weapons is usually a matter of several years. Supplies must be "in the pipeline," as the saying is.

In the past 5 years funds for this "pipeline" supply have shrunk from $8.5 billion to $2.6 billion. The recommendation to add $400 million to the $1.6 billion for arms aid in the administration's current $3.9 billion mutual assistance request aims at partially redressing this situation.

Beyond the question of arms aid there lie important areas which the Draper committee still has a mandate to explore. One of these is the relative balance between military and economic aid to underdeveloped countries.

The present report well deplores the tendency to make economic aid a "whipping boy" and to ignore the need for a long-term commitment in the contest with communism. We hope the final report will afford persuasive blueprints for more effective technical assitsance and self-liquidating development assistance to countries where economic improvement is fully as important as military protection.

## Brushfire Wars Most Imminent Threat to Peace of World

EXTENSION OF REMARKS
OF
### HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. ANDERSON of Montana. Mr. Speaker, in order to save less than two-tenths of 1 percent of the defense budget, the Department of Defense is willing to cut the vitally important STRAC forces by 25 percent, and in order to save less than one-tenth of 1 percent of the defense budget, they are going to cut the Marine strength by one-eighth.

Mr. Speaker, most informed military authorities point out that the most imminent danger to world peace does not lie in a nuclear holocaust. The most imminent and the most likely threat to peace lies in brushfire and limited wars. It is the STRAC force of the Army and the U.S. Marines who have the major responsibility for dealing with such outbreaks. The administration is extremely shortsighted in making a cut in the Marine Corps from 200,000 to 175,000 and in the Army from 900,000 to 875,000, knowing that these manpower reductions will drastically reduce the men in uniform able to deal with emergencies on the ground.

Mr. Speaker, I recently received a letter from John M. Mahan, commander-in-chief of the Veterans of Foreign Wars of the United States, urging that we maintain an Army of at least 900,000 and a Marine Corps of at least 200,000. These are the forces that determine whether or not we will see the free world nibbled away. I hope that an aroused Congress will restore the funds and write legislative mandates to maintain these strengths. The letter containing Mr. Mahan's well thought out presentation follows:

VETERANS OF FOREIGN WARS,
*Kansas City, Mo., March 2, 1959.*

MY DEAR CONGRESSMAN ANDERSON: As commander in chief of the Veterans of Foreign Wars, I recently had an opportunity to meet with leaders from Montana during our annual national legislative conference in Washington, D.C. Since talking with your con-

stituents, I thought it advisable to write you on a matter that concerns all of us—national security.

The VFW, by resolution and by unanimity of opinion, feels that our country is losing basic military strength through proposed plans to reduce our defense establishment. We believe, and we are on record, that our country should have a balanced defense which is ready to move at a moment's notice whether on the ground, on the seas, or in the air. We further believe that a reduction in our ground forces in the face of the Khrushchev challenge over Berlin is unthinkable. Even though the Berlin situation might be settled peaceably, there are still many trouble spots in the world where American support has already been committed.

It is our understanding that unless plans to reduce forces are halted, the Army will lose one division and the Marine Corps will suffer drastic cuts in its combat strength. Our military strength must be great enough to insure peace.

We are told that Russia has 25 divisions on the borders of Western Europe alone. Instead of a reduction of forces, the VFW knows that the American people are willing to pay more for defense, if necessary, and we should keep our ground forces at least at the level recommended by the Congress which was 900,000 in the Army and 200,000 in the Marine Corps.

We would appreciate hearing from you on this matter and if you agree with us, I sincerely hope that you will lend your influence and support toward maintaining our military and naval forces at the above strength.

Sincerely yours,

JOHN W. MAHAN,
*Commander in Chief.*

## Resolution by the Iowa Council of Republican Women

EXTENSION OF REMARKS
OF
## HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. SCHWENGEL. Mr. Speaker, last week the Iowa Council of Republican Women met in Des Moines, Iowa, and as one of the official acts of the meeting, adopted a resolution with regard to the fiscal soundness of this country. I feel that this resolution has the support of a good many Members regardless of party affiliation and I include it in the Appendix of the RECORD:

RESOLUTION BY THE IOWA COUNCIL OF REPUBLICAN WOMEN

Whereas the Republican Party has traditionally been the party of Government economy, balanced budgets, lower taxes, and fiscal integrity; and

Whereas President Eisenhower has submitted a balanced budget for the coming fiscal year, but the Democrat majority in Congress has indicated its refusal to vote a balanced budget and has already embarked on a giveaway spending spree; and

Whereas continuous deficit spending by Government is the chief cause of inflation, which is the cruelest tax of all: Now, therefore, be it

*Resolved by the Iowa Council of Republican Women, at the regular spring council meeting in Des Moines, Iowa, on March 19, 1959, as follows:*

1. That the Iowa Council of Republican Women go on record in support of President Eisenhower's proposal to balance the budget and to apply any surplus on the national debt.

2. That the Iowa Council of Republican Women assure our representatives on the Federal level of our active support in their efforts to reduce Government spending and balance the budget which we feel will not hamper the defense effort.

3. That a copy of this resolution be sent to President Eisenhower and all U.S. Senators and Congressmen.

MARGARET HENNINGS
Mrs. E. J. Hennings.

ARCADIA, IOWA, *March 19, 1959.*

## Remarkable Success of Economic Assistance Program in Formosa

EXTENSION OF REMARKS
OF
## HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an illuminating report just released by the International Cooperation Administration on the remarkable results of our mutual security program in Taiwan through the last 9 years.

What were the key reasons for this spectacular improvement in conditions under a regime which only a few years ago was being pictured to Americans as hopelessly inept, inefficient, corrupt, and reactionary? Some of the main reasons were these: The smaller, more manageable problems on Taiwan, with less than 10 million people, as compared with more than 400 million on the mainland; freedom on Taiwan from the drains and dislocations of civil war; the security provided by 100 miles of water so that government and people could give more of their attention to solving their economic problems; a better government than it was on the China mainland, due in part to the fact that the worst elements sloughed themselves off when the government moved to Taiwan—only people who really care about their freedom and their heritage will carry on under such difficulties and discouragements; effective and proper assistance from the United States, including for the first time since the Japanese war, moral support instead of constant villification and moral lectures.

Free China has moved ahead, as have other countries, such as Korea, Vietnam, the Philippines, India, Greece, Austria, West Germany—where the people had the fortunate combination of three essential factors: a cause like their own freedom and national independence to work for; dedicated, able, and stout-hearted leadership; and the steady and effective support of a strong ally and friend.

It is a first task of our statesmen and the Congress to work for such a winning combination in the equally difficult situations existing in various other countries around the world.

The report on free China, showing what can be done when all three factors are present, follows:

NINE YEARS OF THE ECONOMIC PROGRAM IN TAIWAN

The case of Taiwan (Free China) shows what can be accomplished in an underdeveloped country when U.S. economic assistance is made available on a relatively large scale and is effectively used as a supplement to the country's own resources.

In the summer of 1950, when hostilities broke out in Korea, the Taiwan economy was in a state of near collapse. The island's productive facilities had suffered severe damage during World War II. Nearly all the larger industrial plants had been destroyed or badly damaged, and the war-burdened economy could not afford most of the necessary repairs. Neither could it afford the imports of necessary foodstuffs and raw materials. Irrigation facilities had been damaged, and chemical fertilizers, the lifeblood of Taiwan's intensive agriculture, were available in only meager quantities. Under these conditions farm production was extremely low and industrial output was almost nonexistent. Export earnings were negligible. Inflation was rampant, unemployment prevalent, and living standards were at bare subsistence levels.

This dangerous situation was intensified by the influx into Taiwan of some 1.5 million mainland refugees following the movement of the Chinese Government to Taiwan in December 1949. This influx included some 600,000 of the remnants of Chinese nationalist armed forces. The refugees added about 20 percent to the Taiwan-born population and exerted increased pressure on scarce food, clothing, and housing.

Taiwan faced in 1950 the twin tasks of quickly improving its defensive posture and increasing the inadequate living standards on the island. Few observers at that time gave the country much chance of simultaneous achievement of these objectives. Yet today, only 9 years after the first assistance programs, these goals have been achieved—to a degree beyond the expectations of most observers. With U.S. assistance and the industry of its people, the island has been lifted from a state of partial paralysis, social dislocation, and economic exhaustion into an orderly, productive economy, a nation growing in military security, increasingly dedicated to preserving its freedom from the Communist tyranny of the mainland, eager to conquer new economic and social goals.

BACKGROUND FOR PROGRESS

To begin with, the country was given sustained and substantial help from the United States. Approximately $800 million of economic assistance was provided to Taiwan during the period July 1950 through December 1958.

At first, when scarcities of essential commodities were acute, inflation rampant, and the economy near collapse, U.S. economic assistance consisted largely of raw materials and consumer goods, with only small amounts of funds for productive facilities. Prior to the initiation of the economic assistance program, prices had risen precipitously. It is evident that when prices rise wildly no reasonable businessman will make long-term investments. The only practical course of action in such a situation is quick speculative investments. These, of course, lead in turn to further price rises.

Thus, the first thing the U.S. programs had to do was to bring an element of stability into the situation which would permit the

beginnings of economic growth. Later, as the inflationary situation was brought under control and local production gradually revived, aid program emphasis gradually shifted from commodity supplies to capital equipment for industrial development.

With the help of U.S. economic aid, gross national product (GNP) expanded 85 percent from 1950 through 1958. During the same period agricultural production rose 45 percent, manufacturing 160 percent, and railway freight tonnage more than 100 percent. Electric power, chemical fertilizer, and cotton cloth output increased 165 percent, 275 percent, and 250 percent, respectively. Crop and livestock production rose 35 percent and 100 percent. Most of these gains exceeded the striking population increase of 30 percent, and made possible a gain of 40 percent in per capita GNP.

Production increases achieved with the help of U.S. assistance have contributed to gains in tax revenues and export earnings. In the period 1952–58, export earnings increased 37 percent while Government revenues at constant prices rose 85 percent. Relative price stability has also been achieved, with the wholesale price index rising only about 2 percent in 1958, compared with 90 percent in 1950. With these developments, the share of Taiwan's total economic requirements provided by Taiwan itself has increased, while the U.S. share has declined.

These production gains were achieved primarily with the help of U.S. funds made available prior to fiscal year 1958, when the concept of defense support was broader than at present. In those earlier years, defense support funds were used in Taiwan to help bring about economic growth designed to enable the local economy itself to provide a larger share of its requirements. Under the present narrower concept of defense support—to prevent retrogression of the economy and a reduction in living standards—production gains achieved with the help of ICA aid beginning in 1958 will be smaller, with reduced amounts of investment capital provided from ICA sources. Loan funds being made available from the development loan fund are helping maintain the momentum of past production gains.

A few of the activities in which the United States and the Republic of China, jointly engaged, are described illustratively.

One of the most successful ventures is an organization known as the Joint Commission on Rural Reconstruction, the JCRR, which was begun on the mainland—on the initiative of the House Committee on Foreign Affairs—and subsequently moved to Taiwan. It is governed by five commissioners, three appointed by the Republic of China and two by the United States, and is financed from economic aid funds. In the 9 years of its existence on Taiwan, this singularly effective organization has supported nearly 3,000 projects, in cooperation with local sponsoring organizations. These projects have been designed to increase agricultural production and improve the level of living of the rural people of Taiwan.

One of these many projects was to help reforest the extensive areas which had been denuded during World War II and immediately afterward, by ruthless cutting for military demands and by stripping of grass and trees on the mountain slopes to meet needs of the rapidly growing population for fuel and for farmland. JCRR technicians went directly to the people, visiting local government officials and farmers and explaining how barren hillsides promised as much income from properly managed trees as from many cultivated crops. Seedlings were distributed free or at low cost.

In the past 5 years nearly 350,000 acres (roughly 5 percent of the total land area of the island) has been planted. With the help of the Chinese Air Force and U.S. technicians, a forest inventory was made from aerial survey photos, and a detailed land-use plan for the island was developed. In one county on the east coast, where good riceland is scarce, windbreaks were planted to keep the salt-laden sea winds off the crops, and acacia and pine were planted on the mountain slopes to provide logging stands for the future. In fact, reforestation became so popular in that county that a magistrate was elected after campaigning in favor of the program.

Another project backed by JCRR was increased production of pork, which is an important part of the human diet in Taiwan. In fact, lowland rural Taiwan today gives the impression of being one immense hog factory. The pigs are not only on farms; they are also being raised by soldiers and by townspeople supplementing their incomes. Two primary techniques were used to increase production. One was the crossing of Berkshire boars with native sows to produce improved hybrid pigs. The second factor was the remarkably effective hog cholera control campaign which, using a new kind of vaccine developed in Taiwan, virtually eradicated this disease from the island. The result of these two techniques has been to increase the production of pork at a rate which exceeds the gain in any other agricultural product.

A third project assisted by JCRR has been the land reform program on the island of Taiwan. About three-quarters of Taiwan's farm families have benefited from this reform program developed on Taiwan, either through reduction in their rents or by acquiring ownership of the land they tilled. Farming by tenant farmers has been reduced from 41 percent to 16 percent of total farmland. As a result, farmers are earning more money, are retaining more of what they earn, and are making improvements in their land, their equipment, their buildings, and their methods. The result has not only been a dramatic change in the lives of the farm families who have been affected but has also contributed to the increase in agricultural production and has earned for the Government of free China worldwide acclaim for this progressive and forward-looking experiment in rural democracy.

Turning from the field of agriculture to the field of industry, one can find a number of projects which contributed to the growing economic strength of the island. Basic to to industrial development is electric power. Taking over a power system badly shattered during World War II by allied bombing and typhoons, engineers of the Taiwan Power Co. showed amazing skill and ingenuity in the repair and rehabilitation of facilities by gathering usable machinery and parts from installations scattered all over the island. Building on this base, U.S. economic aid was used first to help complete the rehabilitation process and then to construct new power stations and transmission lines so that by 1958 electric power capacity had increased to 541,000 kilowatts, almost twice as high as in 1950.

Of the many fine hydroelectric sites in the mountains of Taiwan, some of the most promising are located along the spectacular course of the Tuchia River, which twists through high rock walls from the central mountain range down to the fertile western plains. Picking up where the Japanese left off, U.S. aid funds were used to complete a 79,500 kilowatt station at Tienleng, midway along the river's course. In process of construction now is a 40,000 kilowatt installation upriver from Tienleng at Ku Kwan, and in the exploration stage is a high dam and storage reservoir further upriver at Ta Chien, 5,000 feet above sea level. Accordingly to preliminary studies made by Chinese engineers, it would be feasible to construct additional power stations on this same river which would have an ultimate capacity of more than a million kilowatts.

Underlying many of our joint efforts in the field of industry has been U.S. encouragement, wherever feasible, of the use of economic assistance to develop the private sector of the economy. The Government of China contributed to this objective by transferring four government-owned corporations to former landlords as partial payment for land being purchased by tenants. The value of these companies was approximately $40 million. In addition, there were a number of new private investments, particularly in such fields as textiles, chemicals, cement, paper and board, window glass, and electrical appliances. In the single year from 1955–56, governmental enterprise declined from 60 percent of the value of industrial goods produced on the island to 52 percent.

Contributing to this growth of the private sector has been the ICA-supported small industry loan program, which in its first 3 years made loans to nearly 400 private firms for over 500 projects involving plant rehabilitation or expansion. This project not only assists small private enterprises but in its screening and review process makes use of private commercial banks which also put up a part of the funds. A survey of more than half the recipients of loans showed gratifying results—on the average, a more than doubled output.

Also dedicated to the promotion of private industry is the China Productivity Center, a nongovernmental organization established with ICA financial and technical assistance. The objective of the center is to increase Taiwan's productivity through increasing the use of industrial consultation services to small manufacturers and businessmen, providing engineering and plant layout services, counseling on statistical quality control and preventative maintenance systems, and exploring export markets. High hopes are held for the continued contribution which will be made to the health and vigor of the private economy of Taiwan through these devices.

In another industrial field, ICA technicians working through local trade associations of the fishing industry have transferred sampan operators to powered fishing vessels and taught them the value of modern refrigeration, packaging, and marketing techniques. Through our assistance fishermen have been enabled to go farther from shore, thus getting into deep-sea fishing which provides the opportunity for increased yields. The catch in 1957 was a record-breaking 208,000 metric tons as against 193,000 tons the previous year when coastal operations were still contributing the greater share of the total yield.

ICA assistance in the field of technical education has attempted to follow the basic idea that education should be a tool to enable individuals, industries, and nations to lift their levels of living. More and more Chinese educators are responding to this idea and are recognizing that skilled hands are as necessary to a well-balanced society as are classical scholars. Directed principally to areas that would contribute most to economic progress, the technical education program has emphasized vocational, industrial, and agricultural, as well as engineering, education. For example, assisted by a contract with Purdue University, Cheng Kung University has improved its teaching facilities and physical plant for turning out

well-trained engineers to help staff Taiwan's growing industries. By means of a contract with Pennsylvania State University, the Taiwan Provincial Normal University has established a department of industrial education for prospective teachers of vocational industrial shop courses and industrial arts. Gradually there has developed a cooperative relationship with the industrial community. Several major industries have contributed funds to the program, and the emphasis is gradually shifting to the high school level in an effort to meet the requirements of specific industries for skilled and semiskilled workers.

An outstanding record of improvement in public health conditions has been achieved in Taiwan, with the help of U.S. technicians. Through the close cooperation of the native professional medical personnel available on the island and the staffs of ICA, JCRR, WHO, and UNICEF, rapid progress has been made in disease control, medical and nursing education, hospital improvement, and expansion of drainage and waterworks facilities. For example, in disease control, the incidence of malaria, once a great menace to public health, has been reduced from over a million cases in 1950 to less than 500 in 1957, with complete eradication predicted by 1962. Deaths or disability resulting from tuberculosis, trachoma, and plague have all been dramatically reduced. For instance, on the offshore island of Quemoy, plague epidemics had broken out frequently prior to 1951. Imposition of strict control measures, including mass vaccinations and rate extermination campaigns (the latter in cooperation with a JCRR-assisted program to prevent the annual loss of hundreds of thousands of tons of food crops), has resulted in no cases of plague reported for over 5 years.

Significant capital improvements have been made in transportation in Taiwan, including railroad, air transport, harbor, and highway improvements. A dramatic item in this field is the successful construction of the Hsilo Bridge, the longest highway bridge in the Far East, and a crucial link in the north-south highway on Taiwan.

In some fields, such as housing, ICA has cooperated with local institutions in the strategic placing of small amounts of funds and technical assistance where they could be the most effective. For example, a self-help housing project was worked out for the dockworkers of the two major ports, many of whom were living in empty crates or large sheds. Using a welfare fund accumulated from wage deductions and funds earned by dockers for unloading U.S. aid cargoes ahead of scheduled time, several hundred dwellings were constructed with the help of dockers' unskilled labor. Four house designs were prepared for the dockers' own selection. The winning design was one of cinder blocks and reinforced concrete, including a living room, two bedrooms, a kitchen, and a bathroom. Its total cost was $333 equivalent in local currencies.

The review could go on at length reciting the many projects which have helped to bring about the dramatic changes in the economy of Taiwan. The projects not described here include the expansion of fertilizer plants, the rehabilitation of the railroads, important projects in the field of technical training, activities of the JCRR other than those mentioned, and many others. Together, the activities of the free Chinese and the support of the United States have worked a change on the island of Taiwan which makes it fair to assert that the United States has made substantial progress toward achieving the economic objectives of our foreign policy in Taiwan. Moreover, the economic progress attained has helped in no small measure to maintain internal political stability and to boost the morale of the people.

Taiwan is no so well off, however, that it will not need U.S. help from now on. Notwithstanding the marked economic progress already outlined, it still depends on outside economic assistance for about 10 percent of its necessary imports (excluding military hardware) and for about the same proportion of local funds needed to finance internal budgetary expenditures. One overriding reason which compels the United States to continue its support of freedom on the island of Taiwan is a necessarily heavy military burden which must be assumed by these courageous people. Notwithstanding the relatively low levels of per capita wealth, the Republic of China on Taiwan is contributing a greater fraction of its annual income to its own defenses than any other country in the free world, including the United States. Even with such an effort, however, it would not be possible for Taiwan, in the face of one of the highest rates of population expansion in the world, to support its military burden without continued U.S. assistance.

## Fair Trade Federal Dictation Over State

EXTENSION OF REMARKS

OF

### HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. ALGER. Mr. Speaker, fair trade substitutes Federal mandate for State or local discretion. In so doing it replaces the individual retailer's discretion by a manufacturer's edict.

At present the imposing of fair trade law is permissive with the State. Twenty States have invalidated fair trade through State supreme court or State government action.

The pending fair trade bill, H.R. 1253, irregardless of State law, would impose Federal law, with violation and enforcement becoming a Federal matter.

Such further Federal centralization of power plus the harm done the free enterprise system surely merits the attention of every Member of Congress.

### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

### LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

### GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

### RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

### PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

## STANDING COMMITTEES OF THE SENATE

*Committee on Aeronautical and Space Sciences*

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

*Committee on Agriculture and Forestry*

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

*Committee on Appropriations*

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

*Committee on Armed Services*

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

*Committee on Banking and Currency*

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

*Committee on the District of Columbia*

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

*Committee on Finance*

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

*Committee on Foreign Relations*

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

*Committee on Government Operations*

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

*Committee on Interior and Insular Affairs*

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

*Committee on Interstate and Foreign Commerce*

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

*Committee on the Judiciary*

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

*Committee on Labor and Public Welfare*

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

*Committee on Post Office and Civil Service*

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

*Committee on Public Works*

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

*Committee on Rules and Administration*

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

## UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.

# Appendix

## People-to-People Program

EXTENSION OF REMARKS
OF
### HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 26, 1959*

Mr. ENGLE. Mr. President, last week I addressed a joint meeting of the International Municipal Cooperation Committee of the American Municipal Association and the Civic Committee of the People-to-People Program. My remarks dealt particularly with the township-affiliation activities under the President's people-to-people program. In these days when there is much talk of war, it was a distinct pleasure to meet with a group of people who are dedicated to improving international understanding. The State of California has been taking the lead on the township-affiliation program, and I am very proud of this vital interest it is showing in strengthening the ties of people of the free world. I ask unanimous consent to have my remarks at the joint meeting printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

PEOPLE-TO-PEOPLE PROGRAM: TOWNSHIP-AFFILIATION ACTIVITIES

(Excerpts from address by Senator CLAIR ENGLE at joint meeting of the American Municipal Association's Committee on International Municipal Cooperation and the Civic Committee of the people-to-people program, Washington, D.C.)

I am delighted to see you fellow citizens taking an active part in your country's foreign relations through this wonderful people-to-people medium. You are to be commended for giving your leadership to this vital aim of building understanding into our formal and informal relationships with peoples and nations in other parts of the world. Your activities contain a huge potential for peace.

No matter how much we talk about mutual understanding in theory, there is no substitute for getting to know the cultures of other peoples in practice. The friendships that develop with close association can do much to offset the tendencies to be irritated when other countries do not act according to our own standards and traditions. When we know from first-hand experience the motivations and thought patterns which underlie human behavior, we are much better able to develop a spirit of tolerance. This tolerance is not a neutral feeling but rather a positive desire to work together for common ends—even when the means we choose sometimes differ. The close human relationship that is developed under the people-to-people program is just the ingredient needed to give flesh and blood to our formal diplomatic agreements.

Of all the projects that have been developed under the President's people-to-people program, I find that the town affiliation program is perhaps the most important. Certainly it is the most intriguing. I am impressed with the ambitious plans your organization is laying for expanding these town affiliations. I am sure that with the exercise of some imagination the coupling of cities around the world will reap tremendous rewards in developing mutual understanding—in briding the barriers of language, culture, and politics.

While much remains to be done, the leadership taken by the State of California should serve as a great inspiration to all Americans. The cultural, educational, and artifact exchanges between California and cities and foreign cities, mostly in Japan, have already been of great value in breaking down barriers of misunderstanding. The six California cities now taking part in the town affiliation program have enriched the lives of their inhabitants as well as built good will in such places as Osaka, Japan, and Santa Ana, El Salvador. San Diego's affiliation with the city of Yokohama, Japan, has been so successful in cementing good will and providing far-reaching mutual benefits that it may well serve as a model for many other communities. We have only begun to see the possibilities in terms of the potential betterment of relations around the world.

The untapped strength of the people-to-people program reminds me of our efforts to harness atomic power for peaceful purposes. In each case, we are aware of enormous energy and its promise to do enormous good. Yet, so far, atoms for peace is only a partial reality. True, the radio isotopes and controlled radiation have served mankind agriculturally and medically to some extent; and the heat of atomic reactors has been transferred into electrical force that lights cities and runs ships. But, scientists are still doggedly chiseling away at the unknown that lock up the atom's greatest power, which, to date, we've seen only in its warlike form.

And you dedicated scientists of peace are still seeking to release the full resources of the people-to-people idea. I think you are much closer to success than the atomic scientists. In fact, the formula may well be your town affiliation program.

Your panel workshops have taken you through the mechanics of how to run these affiliations. I will not try to add to the excellent thinking that you have already done on the nuts and bolts, so to speak. But I do have three thoughts on how best to tap the people-to-people potential. They're based on the implied spirit of this program. I hope you will consider these reactions of mine and pass them on to those whom you will enlist to help you make this vital scheme grow.

First, let me emphasize again that although the people-to-people program is growing, I'm afraid it is a long way from fulfilling its great potential. Many, many more Americans should get into the program. When you return to your hometowns and cities to develop more affiliations, I hope you will goad your fellow citizens who have not awakened, as you have, to the need for more participation in your country's most vital business, peace and freedom.

Recently, I saw in Life an editorial that may be useful in alerting others to join with you. Life said: "The United States grew into a great and free society precisely because the Nation could always count on a widespread instinct among its citizens for translating private moral conscience into public virtue, a virtue made operational by the citizens' action in the Nation's life. At the moment this instinct is dangerously weak. The resultant gulf between private conscience and public virtue cannot be bridged by easeful living, spectatoritis, or a 'let George do it' indifference. The wider this gulf becomes, the narrower grows our margin of national survival." This quote sums up the need for broadening our people-to-people program.

Second, no matter how sophisticated your affiliation schemes become, I presume you'll try to make as many contacts as possible among ordinary citizens overseas. The people-to-people program is, of course, founded on this thought and I believe it is tremendously important to keep it in mind throughout all your activities. The tendency to have the exchanges limited only to officials of organizations must be resisted. No such program can succeed unless its basis is in the grassroots. It is the average person who needs enlightenment more than anyone else, and to neglect him is to court disaster. The measure of the success of your efforts will be the extent to which you are able to sink these roots of friendship and understanding into the hearts and minds of the common people of the participating countries.

Third, a tradition of American foreign policy is its bipartisan nature. Although there may be differences within the Nation or Halls of Congress on various aspects of this policy, when the policy is set and translated at the diplomatic table overseas, it represents a United States of America. The people-to-people philosophy, too, has bipartisan backing. On both sides of the aisle, Members of your Congress not only espouse and support the idea today, but they believe it should continue far into the future. I want to reassure you that both Democrats and Republicans would like to see you carry forward your great work until people-to-people activities become as frequent and natural, and pleasant, between Americans and other citizens of the world as they are in your own hometown.

The development of the people-to-people program is one of the most encouraging things that has taken place since the end of World War II. The potential achievement is impossible to estimate. But there will be rebuffs and disappointments. You cannot expect to have uniform success in all your undertakings. The human weaknesses that have cursed the world with wars since the beginning of time cannot be erased overnight. One factor that all of you must possess in great abundance is a sense of humor. If you will roll with the punch and not take yourselves too seriously, you will have no trouble creating great interest in your program and, more than that, you will be able to sustain that interest. You have it within your power to make an enormous contribution to world peace at a time when there is much talk of war, and your dedication gives me hope that we can yet find the magic answer to the needs of all mankind.

## Death of Maxwell Anderson

EXTENSION OF REMARKS
OF
### HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 26, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article

entitled "Anderson, Playwright, Dies at 70," from the Alumni Review of the University of North Dakota for March 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANDERSON, PLAYWRIGHT, DIES AT 70

Maxwell Anderson, 70, one of the world's most respected playwrights and a 1911 graduate of the University of North Dakota, died February 28 at Stamford, Conn.

The Pulitzer prize-winning author had suffered a stroke at his home there and died in Stamford Hospital, where he had been partially paralyzed since the stroke.

When he was stricken, Anderson was working on a labor of love—a new musical play to be called "Madonna and Child."

He won the Pulitzer prize in 1933 for his play, "Both Your Houses," and was given a number of other awards for various of his more than 30 plays.

Among those works were "What Price Glory?" written with Laurence Stallings, "Winterset," "High Tor," "Knickerbocker Holiday," "Key Largo," "Barefoot in Athens" and "The Bad Seed."

Last November, the university conferred a degree of doctor of humanities on Anderson.

While attending the university Anderson edited the Dacotah Annual and was active in Ad Altiora, a top literary debate society of that time. He also was assistaant director of the Sock and Buskin Dramatic Society, the forerunner of the Dakota Playmakers, when it was formed in 1911 by the late Frederick Koch.

Following his graduation from the university in 1911, he taught school for 3 years at Minnewaukan, N. Dak., before leaving for California, where he taught high school and college English and worked on the staffs of the San Francisco Chronicle and the San Francisco Bulletin.

In 1918, he moved to New York and the New Republic magazine. Later he became an editorial writer on the New York Globe and then on The World.

In 1924 his sharply satiric "What Price Glory?" opened in New York. It was a smash hit and a Pulitzer prize winner and Anderson became irrevocably committed to his new career and left newspaper work.

In 1933 "Both Your Houses" won a second Pulitzer prize for the author. The New York Drama Critics Circle gave him its award for "Winterset" in 1935 and again in 1936 for "High Tor."

He received the gold medal for drama from the National Institute for Arts and Letters in 1954.

---

## Unemployment in the Aircraft Industry in in the Dallas, Tex., Area

---

EXTENSION OF REMARKS

OF

## HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. YARBOROUGH. Mr. President, the construction of aircraft is a vital industry in the Dallas, Tex., area. There are a number of plants which have provided employment for a large segment of the area's population.

However, because of shutdowns due to cancellation of contracts and shifting of work on projects to plants in other areas, a large number of people in this area now find themselves without work. The number of unemployed is rising.

These unemployed persons are ready and willing to work. Surely it is in the interest of our Nation, both defensively and economically, to provide jobs for them. In addition to putting the people back to work, these skilled workers could produce vitally needed aircraft and missiles for our national defense.

These people are trained to do a job—it is a waste of manpower and skills not to let them do it.

Mr. President, in support of my remarks, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I received from Mr. B. J. Thurman, president of Local 1081, UAW–CIO, in Garland, Tex., and some data which he included.

There being no objection, the letter and data were ordered to be printed in the RECORD, as follows:

UNITED AUTOMOBILE, AIRCRAFT,
AGRICULTURAL IMPLEMENT
WORKERS OF AMERICA (UAW–CIO),
*Garland, Tex., March 24, 1959.*

The Honorable RALPH YARBOROUGH,
*Senator of Texas,*
*U.S. Senate Office Building,*
*Washington, D.C.*

DEAR SENATOR: In reference to my letter to you of February 5, 1959, concerning the rising aircraft unemployment in the Dallas area, I would like to convey to you some additional information concerning the unemployment problem at Temco Aircraft. The attached list reveals the number of seniority employees presently on layoff, the job classification of each, the most senior person on layoff, the bargaining unit employment, and the contract phaseout of the F–3–H program.

I believe this information will give you a better view of our problem at Temco.

Senator, it is sad indeed that the Eisenhower administration is more concerned with its foreign aid program than they are with the unemployed American people. It seems that Eisenhower should consider aid to millions of unemployed Americans of our Nation first.

It is surprising to hear the conversations of the people in the plants, shops, and on the streets. These Americans are beginning to wake up; they too, cannot understand why billions of dollars go to foreign aid while the Americans here at home go unemployed, and yes, some hungry.

We must maintain a great economy in this country of ours and in order to have a great economy we must maintain a high level of employment. A country weak in economy is easy prey for the Communist rule.

We must forever be on guard against any evil forces who seek to destroy this Nation.

This country must maintain not only a high economy but we must achieve leadership in missiles technology and other critical scientific fields.

We have the skill and determination. We ask only the opportunity to use our skills and determination.

On behalf of the members of Local 1081, I wish to express our deep appreciation for the concern you have already given to our problem at hand. We are proud of the job you are doing in representing this country and the State of Texas. The many working people shall not forget the battles you have fought in their behalf. Again, we say thanks, Senator.

Sincerely,

B. J. THURMAN, *President.*

*Seniority workers presently on layoff, Dallas-Garland, as of Feb. 22, 1959*

NOTE.—The most senior employee has a seniority date of July 29, 1948.

BARGAINING UNIT EMPLOYMENT

1. Temco's bargaining unit employment at the Dallas and Garland facilities for March 1958 was 4,721.

2. Temco's bargaining unit employment for March 1959 was 3,143 and is decreasing weekly.

3. These figures reveal an employment decrease of 1,578 in bargaining unit employment from March 1958 to March 1959.

4. If additional contracts are not secured the bargaining unit employment will decrease to 1,500 by the end of 1959.

CONTRACT PHASEOUT

3. These figures reeval an employment deout rapidly. Approximately 300 employees to be laid off on this contract.

## Thirty-third Anniversary of Signing of Long Island University Charter—Address by Secretary of the Interior Fred A. Seaton

EXTENSION OF REMARKS

OF

## HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. MANSFIELD. Mr. President, on March 24 Secretary of the Interior Fred A. Seaton delivered an address at Long Island University, Brooklyn, N.Y.

Secretary Seaton, in my opinion, is one of the outstanding members of the President's Cabinet. He comes from the Midwest. He has served in this body. He has had a distinguished career. At all times he has exhibited a great degree of commonsense.

While Secretary Seaton and I do not agree on all things, usually our disagreements are of a minor nature. I think, by and large, he has been one of the outstanding public servants of this country.

I ask unanimous consent that the address which he delivered on the occasion of the 33d anniversary of the signing of the charter of Long Island University, at Brooklyn, N.Y., be incorporated in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF THE INTERIOR FRED A. SEATON AT LONG ISLAND UNIVERSITY'S 33D ANNIVERSARY OF THE SIGNING OF THEIR CHARTER, BROOKLYN, N.Y., MARCH 24, 1959

It is an honor and a pleasure to join with you here on the 33d anniversary of the signing of the charter of Long Island University.

These, indeed, are active and troublesome times.

Russia's Premier Nikita Khrushchev boasts that the Communists will permit us to exercise our rights in Berlin only at their sufferance; and we witness the President of the United States once again standing with firmness and reasonableness in the face of an ugly and unjustifiable threat from Moscow.

Serious as the Berlin question is, this is no isolated instance of crisis, but rather one of a continuing series engineered by the Soviet Union and its satellites.

The pattern—in the Middle East, in the Formosa Straits—has become familiar to all of us: Communist military threats met and turned back by free world firmness and unity.

And I remind you that the free world's success in dealing with this conspiracy is due in enormous measure to the intelligence and courage of two men, the President and the Secretary of State of the United States.

As a backdrop to such immediate crises, there are, of course, the military and scientific competition and—perhaps even more important in the long run—the economic contest. You will recall that Premier Khrushchev asserted that by 1970, or even sooner, the Soviet Union will surpass the United States in production and that our grandchildren will live under socialism—the latter being, of course, the Soviet's current idiom for Russian communism, which isn't even Marxist communism, much less historical socialism.

Even if we discount Russia's boasts in the scales of fact, we clearly have our work cut out for us.

We should never forget that proving Khrushchev's prophecy to be false depends only in part upon what the Russians do or don't do. The answer also largely depends upon what we do.

With that fact firmly fixed in our minds, I suggest there are certain things which, in the years ahead, all of us Americans must learn to do better for our own good and the good of people everywhere.

First of all is to develop the habit of examining only in the cold light of reason certain commonly alleged facts, rather than glancing at them through the cloudy looking glasss of mental laziness or prejudice. A fact is a fact, no matter what, and all the fools in the world to the contrary, it remains just what it is, a fact.

Above all, it ought to be apparnt that we must avoid every temptation or invitation to fly into a frenzy. Now, please make no mistake. I am not preaching complacency. What I am saying is that to become panicky over the spurious can be as bad as to be indifferent to the serious.

To illustrate, consider some allegations versus facts in the realm of economics.

The claim is loudly being made by some people that the gross national product of the Soviet Union is increasing at a faster rate than ours. On the face of it, that is quite true, if the published Soviet statistics are true. But it is just as true that the Russian's probable gross national product in 1957 was less than half of ours, to be exact, 40 percent. Perhaps more importantly, as their economic base has grown in the past decade, even their claimed rate of increase in output has been on an escalator going down, from 26 percent to 16 percent to 10 percent. That makes all the difference in the world when you are asked to make comparisons between our rate of economic growth and that of the Russians.

Again, make no mistake. No prudent people would pooh-pooh the economic advances made by a formidable and malevolent opponent. Neither would a prudent people fail to analyze those advances for what they actually are.

There is something else I suggest we all should do. That is to subject to the most intense kind of public scrutiny everything that Government does and spends for, continually asking ourselves these questions: Is this function vital? Is it something nice to have but not absolutely necessary now? Or is it luxurious or even ludicrous when contrasted with some other program, including the dire necessity of bringing our national finances into order by balancing the budget so we can be fiscally strong for the long ideological and economic struggle ahead?

As citizens, of course we are determined to invest every nickel necessary to keep this country's defenses strong, to help keep its economy flourishing, and appropriately and properly to aid in furthering the security, health and education of every one of our citizens. Try as you will, however, there is no way to divorce our security, health, education and happiness from the sensible management of the citizens' tax dollars. We simply must be determined—if we believe at all in the public good—that the Federal budget contain not one single cent for the care and coddling of a sacred cow which is there only because we seem to be pathologically afraid to look at it, judge its merits, and, if necessary, cut its throat.

In this time of rising prosperity and comparative world peace we should be determined to pay the price ourselves for any program we decide is necessary, not to charge it, plus interest, to our children.

What a shabby thing it is to toss into every baby's bassinet a mortgage, payable to yesterday and then wish the little tot well. And yet that is exactly what some of our political pediatricians would have us to do when they demand we spend more than we take in.

The mortgage on the future is altogether too big now. In 1939 the Federal debt limit was $45 billion. By 1945 it was up to $300 billion. It now stands at $288 billion.

Some people profess to believe all that means little or nothing. "We owe it to ourselves" they say, "so what?"

They couldn't be more wrong.

In fiscal 1960 we shall be spending over $8 billion for interest on the public debt; that is to say 10½ percent of the total 1960 budget. That's for yesterday.

For the conservation, management, and development of all the natural resources of the United States, excluding agriculture, we can invest only $1,710 million—2.2 percent of the total budget. That's for today and tomorrow.

In other words, we will be expending five times as much on yesterday as we can invest in tomorrow. Five times as much for dead horses as those we must ride to our destiny.

The Eisenhower administration believes Americans do want to invest in the future, not forever be paying for the past at the expense of tomorrow. That's one major reason it is fighting all reckless spending proposals, whatever they are. I have cheerfully joined in that fight, politically rough and tough as it is, because as Secretary of the Interior I intend neither to preside over the bankrupting of our Nation's conservation programs, nor to participate in bankrupting the Nation.

In presenting to the Congress a balanced budget for 1960, the President of the United States has shown his awareness of another sure fact: That to pile up bigger and bigger Federal deficits is to do something more evil than just to pass the check to our children; it is actually to issue a reckless and open invitation to that historical killer of free governments—inflation.

Yes, I know, there are some people who ask, "What's wrong with inflation?"

Lots of things.

Inflation hurts the Government. If today's dollar is tomorrow's dime, who then will buy Government bonds?

Inflation hurts confidence—confidence of the people in the future as well as in the present. We must never drift to the point where people believe to speculate is to be safe but to save is to gamble.

Inflation hurts defense: You and I will have less security, not more, if for every foot that weapons' spending goes up, weapons' prices go up 3 feet.

Inflation hurts our trade abroad: The higher American prices go, the easier it is for everybody to undersell us in the world's markets, at home as well as abroad.

That costs dollars. Worse, it costs men and women their jobs.

Inflation, by further debasing the dollar and raising prices, hurts people—you and me and nearly everybody; and, most of all, it hurts the poor, who can protect themselves the least.

Don't fool yourself. Inflation is no Robin Hood, robbing the rich to help the poor. It's cruelest and deadliest to the old, the widowed, and the families of the poor. Inflation is no graduated tax. For the Nation and the individual it is the quicksand of security.

Finally, we must recognize the revolution of rising expectations which is taking place in the less developed countries of the world. It is with us, and it won't go away.

There is, unfortunately, much to support the generalization that if a poverty-stricken man has a choice only between four freedoms and four sandwiches, he will choose the sandwiches. Unless we do our fair share to help such people—in the Middle East, in Africa, in Asia, in Latin America—to get both, all too often their tendency is to listen to the Communist agent who promises both but, in the end, delivers neither.

In his "Reflections on the Revolution in France," Edmund Burke wrote, "In the groves of their academy, at the end of every vista, you see nothing but the gallows." In the 20th century, at the end of every vista in the Communist formal garden we see with our own eyes the spectre of Hungary—and other once independent nations—and the image of Imre Nagy.

It is for us, the free, to help people everywhere to see this fact for themselves, to encourage their rejection of Russian domination disguised as aid. We must stand ready to help them better themselves.

Thus far, we have done rather well despite some mistakes and the constant carping of those who profess to see no good whatever to be derived from American money invested abroad in our mutual security programs.

In another area, too, there is hope for the future. Today in the Department of the Interior, for example, the Office of Saline Water is working with scientists throughout the United States and many other countries to change a key fact of human history—that up to now nearly all the people of the world have necessarily depended for life entirely on fresh water upon and beneath the land. Science has now come to the verge of learning how to convert ocean water economically into fresh water for human consumption, and ultimately for agriculture and industry.

This year, the Department of the Interior is preparing to begin construction of five such demonstration plants in the United States. On March 2, I announced the selection of the first of the five conversion processes to be used in these plants. The others will be announced at the rate of at least one each 3 months.

The first plant, we have considerable reason to hope, will bring the cost of conversion down below $1 per thousand gallons. As that price continues to descend in community after community, it will approach that of getting water from other sources—rivers, lakes, and wells. More importantly, it will enable people to obtain water economically where any other source is insufficient or even absent.

Last August 13, in addressing the United Nations here in New York City, the President of the United States spoke of the great common shortage, water, throughout the Middle East.

Today we can have hope that the end of water shortages on many continents is in sight and that the troubles and poverty and suffering they aggravate or cause are near solution as we near the perfection of economical processes for saline water conversion.

Consider the case of Israel. There the people grow their food on a million cultivated acres. Already, pressed to expand this acreage, they have had to pipe fresh water from the Yarkon River near Tel Aviv, about 60 miles south to the northern edge of the Negev Desert a vast wasteland with little fresh water either on or known to be beneath its surface. It is a 3-million acre expanse stretching from Beersheba in the north to Elath on the Gulf of Aqaba in the south, a part of the world which some travelers have likened to the surface of the moon.

Here in the United States, water impoundage, plus irrigation, has transformed the Imperial Valley of California and the salt desert of Utah, making them gardens bringing forth vegetables and trees and fruit. In a similar way, saline water conversion, plus irrigation, should one day make it possible to transform the Negev. Think of saline water conversion units dotting that whole area, drawing up brackish waters from underground or bringing salt waters from the sea, and pouring them, fresh, into canals and laterals to revive the now dead land. If only half the entire Negev should turn out to be suitable for farming—and that may be a conservative estimate—Israel could double its cropland.

From where we stand, here in 1959, we can gaze toward the horizon and see this prospect more clearly than human beings have ever seen it before. For the future of life on this planet the implications in saline and brackish water conversion stagger the imagination.

The United States is now engaged, in concert with 16 nations, in working on a hundred and one facets of a scientific breakthrough to solve the problem of cost.

Here I should note that among the scientists engaged in saline-water research are some from the Soviet Union, and that may prove to be a most significant fact.

Indeed, can we not hope and pray that along with the political competition of the years ahead a second theme will begin to emerge and steadily grow in intensity?

We need to encourage the theme of international cooperation, designed to overcome the problems of ignorance, poverty, hunger, and disease which today are the piteous portion of millions upon millions of members of the human race. If that theme could gradually grow strong enough to overcome the current one of suspicion, doubt, and fear, then whenever a Russian child learns to read, whenever a Russian scientist makes a discovery, we could have much more cause for hope than for apprehension over the uses to which this learning and this science might one day be put.

Here our problem is clear and demands solution. It is to make certain that the hope and not the apprehension is justified in the end; that the peace of the world is preserved; and that liberty and representative government do not perish here in our beloved America and from this troubled earth.

## Fair Trade Law Repeal

EXTENSION OF REMARKS
OF
## HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
*Thursday, March 26, 1959*

Mr. DOUGLAS. Mr. President, one of the best informed and ablest defenders of the consumers of the country is Father Robert J. McEwen, S.J., of Boston College, a member of the Massachusetts Consumers' Council, and an expert in all matters affecting consumers. I ask unanimous consent that the statement which he made before the Massachusetts State Committee on Mercantile Affairs, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF REV. ROBERT J. MCEWEN, S.J., BEFORE MASSACHUETTS STATE COMMITTEE ON MERCANTILE AFFAIRS IN HEARING OF FAIR TRADE LAW REPEAL BILLS

While I can pay tribute to the sincere conviction of some small businessmen that these laws are necessary and helpful to them, I must state in all frankness the following points:

1. With regard to these fair trade laws, there is absolutely no rational economic argument in their favor. If these laws succeed in their alleged purpose, which is to keep in business all those now engaged in a trade or occupation, they cannot help but result in dividing the market so thinly that few, if any, sellers can make a comfortable profit. In addition, guaranteeing profit margins fixed arbitrarily by a manufacturer only serves to guarantee to the larger stores with fast turnover an enormous profit which will then allow them to cut the prices of other merchandise not similarly price-fixed. Thus the high profit on drug and beauty items enables the supermarket to shave profit margins to the bone on fruits and vegetables and other grocery items. Thus competition is increased for the small grocer. Thus the small grocer is made to bear the full effect of the competition from which the drug store is protected.

2. These laws have been ineffective now for a year or two, and no great collapse of the American economic system is evident. Therefore, the scare arguments advanced to support these laws are clearly fallacious. I remember the 1954 hearings when one witness told the U.S. Senate committee that if they did not pass a fair trade law in the District of Columbia every business handling fair trade products would be bankrupt within the year. I think a visit to Washington will reveal that no such scare prediction ever came true.

3. If you are serious about attacking and solving the problem of inflation in this country, you must immediately repeal these laws which inevitably add to the general cost of doing business. If they succeed in their alleged purposes, this is inevitable because they keep an unnecessarily large number of people in these protected occupations. This necessarily raises not only the wage rates but every type of cost in the protected industry and adds further fire to inflation pressures.

For Republican leaders like Senator Lamson and Senator Gibbs, these bills and these laws present a severe test. If you support fair trade price-fixing laws and use the argu-

ment that Government must protect the businessman's job, protect his price, and protect his profit, you are betraying the American enterprise system at the State level.

Also, you are abandoning the principles and philosophy of the national Republican administration whose agencies have gone on record opposing these price-fixing laws. Among such national agencies are: the Council of Economic Advisors, the State Department, the Federal Trade Commission, the Department of Commerce, and the Department of Justice. Most Republican newspapers and the U.S. Chamber of Commerce are on record against these laws.

May I remind you that if you accept the principle implied in these laws of government protection for the price and profit and job of the businessman, you can never with good conscience challenge any union measure or labor demand for job protection, for job perpetuation, or for wage protection. You may never challenge as inflationary any labor featherbedding practice or any wage-increase demand. In short, your support of these laws constitutes a complete surrender of the national principles and policies of republicanism.

Legislators should vote on bills not from personal feelings, but from considerations affecting the general welfare. I admit this is hard sometimes, but it is still the ideal toward which legislators should strive.

For you Democratic legislators, all that I have said above applies with even more force because your party constantly attempts to identify itself with the common people and with love of the poor consumer. These price-fixing laws are definitely not in the consumer interest.

The only true and permanent protection for the consumer is knowledge and trust in a retailer whose skill and integrity will command the consumer's allegiance.

## Tribute to James E. McCaffrey

EXTENSION OF REMARKS

OF

### HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. ENGLE. Mr. President, personal satisfaction in public achievement is a right that has to be earned by conscientious performance. A man who thoroughly qualifies in this respect is James E. McCaffrey, general manager and chief engineer of the Sacramento Municipal Utility District, whose forthcoming retirement in June was announced last week in California. But knowing Jim McCaffrey as I do, I doubt that he ever has thought much about his private glory. He always has had a bigger concern, and that is how to produce public satisfaction with the accomplishments of the utility district that he has headed for more than 20 years. The response of the press and public to his retirement announcement certainly shows the public approval of Mr. McCaffrey's work. Mr. McCaffrey's record at Sacramento is one that has been indelibly written in the growth of the community where, under his supervision, the public utility district has built a vast network of transmission lines and substations to ably serve one of the Nation's fastest growing areas. At a time when the cost of other commodities has been rising—including, I might note, the cost of electricity under northern California's competing privately owned utility—the publicly owned Sacramento district in this period has made three rate reductions. The record of the Sacramento Municipal Utility District under Mr. McCaffrey's guidance dramatically demonstrates the inherent advantages of public power. Besides the physical works of the district, Mr. McCaffrey has built an efficient organization which I am confident will carry on this record after his retirement.

As a tribute to fine public service, I am pleased to request unanimous consent to have printed in the Appendix of the RECORD, an editorial from the Sacramento Bee of March 14, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FINE PUBLIC SERVICE

James E. McCaffrey, who has resigned as general manager and chief engineer of the Sacramento Municipal Utility District, effective June 1, will leave behind him an enviable record of able and dedicated public service.

McCaffrey has been the general manager not only since the day the Sacramento Municipal Utility District went into the electrical distribution business but for some 8½ years before that, during the tedious and often frustrating process of acquiring the distribution system from the Pacific Gas & Electric Co.

Under his guidance the Sacramento Municipal Utility District is and always has been one of the most efficient and successful publicly owned power operations in the United States.

McCaffrey's responsibility has been both to make the Sacramento Municipal Utility District a going concern and to cope with the problems inherent in a rapidly expanding area. These duties he has met with ability and vision.

The crowning achievement of his years of service was the start of work on the Sacramento Municipal Utility District's $85 million upper American River project which will provide the district with its own source of power. And the 8 to 1 vote by which the people of the district approved the project was in effect an endorsement of McCaffrey's management.

In putting together an efficient organization, McCaffrey brought in Paul E. Schaad, whom he personally trained and who will succeed him as general manager and chief engineer. Schaad is equipped to carry on in McCaffrey's efficient pattern.

## Auto Firms Have Confidence in Michigan

EXTENSION OF REMARKS

OF

### HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. McNAMARA. Mr. President, in the Detroit Times of Wednesday, March 25, there is an article describing the role of the automobile industry in Michigan.

It points out, for example, that instead of taking plants out of Michigan, the industry is building new plants.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE REAL TRUTH—AUTO FIRMS PERMANENT GOLD MINE

(To the READER: Of all the statements given currency by those who in envious malice have been knocking the business health of Detroit and Michigan, one of the commonest is that the automobile industry is deserting the area. Here is an article which weighs this charge, coldly by assessing the true facts. What is set forth is impartial and is not to be construed as either a defense or attack on any person or political party.—THE EDITOR.)

(By Tom Kleene)

Detroit and Michigan have a built-in, gilt-edged insurance policy on their economic future.

Very few, if any, other States or areas can boast such security.

The insurance policy that offers these enviable guarantees here, of course, is the automobile industry.

The chances of the policy lapsing are just exactly as remote as are the chances that the great American public will abandon the automobile as a means of transportation.

Or that the industry itself suddenly will launch a massive industrial migration out of Michigan that would overshadow the historic flight of the textile mills from the Northeastern States to the South.

JUST WISHFUL THINKING

It has been suggested in some quarters—more as the result of wishful thinking than any concrete evidence—that the beginning of such a mass move already is underway, but that is palpably false.

It will be adequately demonstrated later that the construction of new plants plus huge additions to engineering and research facilities have been strengthening Detroit's claim to being the core area of the whole automobile industry.

The promise of this area's future is to be found in the yardsticks employed by economists and others whose business it is to prognosticate the state of the Nation's economic health.

By every standard available to these analysts, the automobile industry will grow, progress and prosper in the years ahead.

And it's a risky business to discount such expert readings.

The record shows clearly that the major miscalculations in the long-range forecasts of these economic specialists almost invariably have been on the side of over-conservatism.

NOT 6-MILLION-CAR PACE

If it is accepted that the automobile industry is on the threshold of another era of growth, progress and prosperity, then it is indisputable that the core of the industry will share importantly in these benefits.

There are those skeptics who will point out that even now the industry is finding it impossible to maintain full employment despite the fact the automobile market supposedly has returned to the high road.

It is difficult for these persons to understand why the industry is producing cars at a 6 million annual rate while laid-off workers are walking the streets.

The answer is that it is clearly not in the cards for U.S. automobile manufacturers to build 6 million cars this year.

If any such volume were anticipated, the factories at this time of year would be building at close to a 7 million annual rate to offset the slower months later in the year.

And such a pace would absorb quickly the majority of those now laid off at the automobile plants.

A SPECTACULAR PAST

Detroit and Michigan, in a sense, are in trouble because of their own spectacular past performances.

The industry is still in the shadow of its remarkable 1955 showing when upwards of 7 million passenger cars and nearly 1 million trucks were sold on the American market.

Its inability to match that performance in any of the intervening years has produced a flood of criticism and derogatory comment from those who have forgotten how Detroit sparked the Nation out of two earlier postwar recessions.

The truth is that the automobile business is coming out of what the late George W. Mason referred to as "the very high level doldrums."

Natural concern over the present unemployment situation in Detroit and Michigan is minimized somewhat by the bright prospects for the decade that lies ahead.

In an ultra-conservative summation of the mounting avalanche of expert testimony to the effect that new peaks are in prospect in the glowing decade ahead, Harry A. Williams, managing director of the Automobile Manufacturers Association, states:

"It is the consensus of industry economists that the normal market for the U.S. automobile industry in the 1960's will be at least 6 million cars and 1 million trucks per year.

"However, in years of relative prosperity, total passenger car sales may rise as high as 8 million or so."

The logic of this summation is abundantly evident from an examination of the authentic statistical evidence on population growth, the decentralization of residential areas and increases and changes in the distribution of real family income.

In the matter of population, for example, the Bureau of the Census provides encouraging information.

By 1975, the U.S. population will have grown from its present 175 million to approximately 230 million, and there will be 30 percent more persons of driving age than there are today.

GREATER NEED FOR CARS

The continued trend toward suburban living at the same time will tend to create greater need and desire for automotive transportation, and ownership of more than one car in the suburbs should become commonplace.

The economic shift is expected to put about 55 percent of consumer units in the $4,000 to $10,000 income group after taxes by 1965. That compares with about 50 percent today and about 20 percent in 1929.

Not only is the Nation's population growing at an impressive rate, but these figures demonstrate that the American people will have a greater need for automobiles and a greater financial capacity to buy them than before.

Another factor not to be overlooked is the vast new Federal highway modernization program now underway and the new urban expressways being built and planned all over America.

These developments certainly will encourage the further expansion of highway transportation throughout the Nation by promoting better, more pleasant and more economical use of motor vehicles.

TWO HUNDRED AND THIRTY MILLION ON THE ROAD

One more meaningful statistic from the bureau of public roads serves to round out all of this growth-progress-prosperity data.

By 1971, there will be 101,200,000 motor vehicles in the United States (more than half again as many as now) that will travel 1,051,400,000 vehicle miles annually.

And by 1976, about 230 million people will be driving 114 million motor vehicles 1,200,300,000 miles a year.

That, briefly, is the case in boxcar figures for the future outlook of the industry.

The confidence that this economic well-being insures the future security of Michigan is based on the certainty that this industrially rich region will always be the heartland of motor vehicle manufacturers.

Detroit first laid claim to the title of the capital city of the motor industry in 1912 when it wrested the honor from Indianapolis by outproducing that city by a mere 378,000 vehicle-year.

Michigan had developed trades and industries in the latter part of the 19th century which readily adjusted to the new auto industry.

Most of the qualifications that made Michigan the center of automotive production in the industry's infancy remain.

Added to these are many new ones, and the greatest is the all-important simple fact that the industry now is here. A mass flight would be about as practical for the automobile industry as moving the entire governmental structure and its buildings out of Washington, D.C.

DECENTRALIZATION AN OLD STORY

Those who profess to see the signs of such a development are fuzzily confusing mass migration with what is really decentralization.

Actually the process of decentralization is almost as old as the industry itself, but it is only in recent years that the term has taken a place alongside of automation as a kind of industrial bugaboo.

As applied to the automobile industry, the term means that manufacturing plants should be oriented to suppliers and raw materials and therefore located largely in the Northeastern part of the country, and that assembly plants should be oriented to the market.

Henry Ford realized the advantage of locating an assembly plant near the consumer soon after his company went into mass production. The result was that at one time in the early twenties the Ford Motor Co. had nearly twice as many assembly plants as it now has.

The exacting business of deciding where a modern industrial plant should be located is a cross between a science and an art.

Chrysler Corp. states that it is a combination of market analysis, distribution, and manufacturing cost studies, and tax schedules which indicate a generally favorable (or unfavorable) location for a new production facility.

LAND NOT ONLY CONSIDERATION

If an automobile assembly operation is planned, the region in which it is to be located must have the potential of purchasing at least 500 of the company's cars a day.

In considering specific sites, Chrysler looks for an area capable of supplying the plant personnel of the type needed within a 30-mile radius.

Next comes consideration of such things as zoning ordinances, land costs, type of soil, accessibility to railroads and trunk highways, availability of water, sanitary and drainage systems, electricity and gas, and terrain which will not require costly grading.

There are also such other important factors as labor relations, housing conditions, recreational facilities, police and fire protection, and hundreds of other details an industry must consider when seeking a new plant site.

Chrysler reports that when a plant is lured into a community by such inducements as free land the result, in most cases, is not a happy situation either for the community or for the company concerned.

The company's real estate department states that in regard to land costs and taxes: "We expect to pay our way."

The national growth and expansion of the automobile industry since World War II has intensified the locational pattern which began in some phases of production back in 1914.

In other words, the automobile industry is decentralizing in small units outside Michigan while the Detroit region is holding the main concentration of plants.

This is borne out by the figures for new capital expenditures for the industry's greatest 3-year expansion boom, prepared for 1954, 1955, and 1956 by the Bureau of Census.

Of a total investment of 3,272 billion for transportation equipment expansion in the 3-year period, $1,282 billion was spent in Michigan, or almost 40 percent of the total.

That is nearly twice the investment of $712 million in Indiana and Ohio combined, the two States that are supposed to be enticing the automobile industry away from its home State.

The new capital expenditure figures show relative fluctuations in new capital investment, but the sums spent in Michigan continued through the period at a consistently high level.

FORTY-FOUR NEW MICHIGAN PLANTS

Since the end of World War II, the vehicle manufacturers have built 113 new plants, of which 44 were built in Michigan.

The new plants in this State include 27 new manufacturing facilities, 5 assembly plants, 8 engineering and research facilities (2 of them proving grounds), 3 administration buildings and a parts depot.

It is clear from these figures that the postwar pattern of expansion has not been decentralized from the standpoint of taking facilities from the Detroit area and placing them elsewhere.

Rather it has been decentralization from the standpoint of building new facilities outside the Detroit area to increase productive capacity closer to the point of use.

In the years ahead, it is entirely possible that Detroit and Michigan may lose some of their present 30 percent share of all passenger car production volume.

AUTO MEN ARE OPTIMISTIC

But the fact that the Big Three have their administrative offices in this locality and have invested literally billions for research and engineering facilities here should go a long way toward upgrading automotive employment and assuring greater stability in the area.

Actually, the present spreading out of the automobile industry from the focal point of Detroit reflects the optimism of the manufacturers over the future market, which—indirectly at least—makes this area's insurance policy all the more secure.

---

## Productivity of Railroad Workers

EXTENSION OF REMARKS

OF

## HON. JOHN B. BENNETT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 26, 1959*

Mr. BENNETT of Michigan. Mr. Speaker, under leave to extend my remarks, I include the following statement by the Railway Labor Executives Association entitled "Productivity of Railroad Workers":

The Railway Labor Executives' Association today released its findings in the first

of a series of studies it is undertaking to determine the extent of the soaring productivity of railroad workers in the various crafts in recent years.

The findings of this first study, based entirely on official Interstate Commerce Commission statistics, bolstered completely the contention of the RLEA that the output of railroad workers has now reached an all-time high.

The first RLEA study was completed under the direction of President H. C. Crotty of the Brotherhood of Maintenance of Way Employees. It analyzed the rising productivity of the approximately 120,000 maintenance-of-way workers who today, by whatever yardstick used, were found to have broken all records in terms of output per employee and man-hour worked. Maintenance-of-way men, who maintain and repair the tracks and roadbed, today make up about one-seventh of all railroad workers employed in the industry.

Crotty included in the study three tables based on the latest official ICC figures. These measured the number of employees per mile of road operated, the hours worked per mile, and the average miles of road operated per employee, and the revenue traffic units per employee and per hour worked for the 16 classes of maintenance-of-way and structures department workers on the class I railroads in the United States.

Each of these measurements, without exception, showed spectacular increases in output, with particularly high rises in recent years. For example, the findings show:

1. In 1958, the approximately 222,000 miles of road maintained by 120,780 maintenance-of-way workers was only about 12,000 miles less than the total in 1922 when over three times the present number of workers were required for maintenance. Since 1950, when one maintenance worker was required for each mile of track, the number per mile in 1958 had been cut almost in half or to 0.54 per mile.

2. In 1925, a total of 4,133.7 hours were worked by maintenance-of-way men for each mile of road operated. By 1957 the hours worked per mile had plummeted to 1,389.3.

3. Since 1930 the average of the total miles of road operated per section foreman has more than doubled. The same spectacular increase was also noted in the average of the total miles operated per individual section man, as well as per designated group of workers comprised of section foremen, section men, extra gang foremen and extra gang men.

4. The revenue traffic units per employee increased nearly fourfold between 1922, when 1.1 million per employee were recorded, and 1957, when the number of revenue traffic units per worker stood at 4.3 million. In terms of revenue traffic units per hour worked, the increase in productivity was even more spectacular, rising from 448.5 per man-hour in 1922 to 2,171.8 per man-hour in 1957. Since 1945, the gain has been more than that made in the 23 years preceding.

"I will be the first to concede that the spectacular gains in productivity among waymen in 1958 reflected in these statistics is due in part to the unwise management policies which have cut back railroad maintenance forces beyond the point required for efficient and safe operation," Crotty said. "Nevertheless, the fact remains that, despite the severe cutbacks and the drop in morale among rail workers brought about by the carriers' lack of concern for the welfare of their employees, the remaining workers have achieved a minor miracle in increased output under the most difficult circumstances.

"Instead of trying to smear these outstandingly efficient employees as 'featherbedders,' an enlightened management on the railroads would be expressing its appreciation for the unparalleled contribution these workers have made to an essential public service."

The tables, which show the steady gain in productivity of railroad maintenance-of-way men over a number of years, follow:

*Revenue traffic units per employee and per hour worked, 16 classes, maintenance-of-way and structures department, class I railways in the United States, selected years*

| Year | Revenue traffic units per employe | | Revenue traffic units per hour worked | |
|---|---|---|---|---|
| | Number | Index | Number | Index |
| | *Millions* | | | |
| 1922 | 1.12 | 100.0 | 448.5 | 100.0 |
| 1925 | 1.24 | 111.1 | 496.1 | 110.6 |
| 1930 | 1.27 | 113.2 | 526.2 | 117.3 |
| 1935 | 1.55 | 138.0 | 683.3 | 152.4 |
| 1940 | 2.05 | 182.5 | 860.5 | 191.9 |
| 1945 | 2.95 | 263.0 | 1,128.1 | 251.5 |
| 1950 | 2.87 | 255.7 | 1,410.3 | 314.4 |
| 1955 | 3.72 | 331.6 | 1,858.2 | 414.3 |
| 1956 | 4.12 | 367.0 | 2,056.6 | 458.6 |
| 1957 | 4.32 | 384.8 | 2,171.8 | 484.2 |

## Economy—and More Holidays

EXTENSION OF REMARKS
OF
## HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 26, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Economy—and More Holidays," from the Steuben News for March 1959:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECONOMY—AND MORE HOLIDAYS

There are plenty of fiscal woes in Washington, in the 49 States and in practically every community as all of us should know by now. The cry for economy can be heard all across the Nation. Frankly, not yet penetrating enough as the cry for new taxes is, unfortunately, much louder.

Steuben News, during the past few months, has concentrated on these ever-increasing taxes in the Nation, in the States as well as in the cities and has admonished the membership to let their voices be heard, collectively and individually.

The response has been very gratifying. But, unless the drumfire of letters, of wires, and of telephone calls continues—incessantly—until the voting begins in Washington, in Albany, in Sacramento, in Lansing, in Trenton, in Harrisburg, and elsewhere, the lessening of pressure will encourage the legislators to follow their own counsel or to give in to the party command.

Therefore, once again, we urge all the members, from coast to coast, to continue with their efforts. Every letter is important—and don't let Jack do it. This, our work, is truly in the service of the community, large and small. It is our beholden duty to warn of waste and to stress economy. By doing so, we also have our personal interests in mind so that the money saved on often unnecessary expenditures and, consequently, on taxes, can be used to give our own children a good education and to make our own old age a more carefree one.

Yes, so nearly everyone in the legislative chambers talks economy and warns of the steadily growing army of bureaucrats—now one out of six of all gainfully employed people in the United States. But at the same time, as a perusal of the CONGRESSIONAL RECORD demonstrates, there is currently a movement underway to give Federal employees additional benefits. It may not sound like much, but in our mind it is. There is a bill in the U.S. Senate—and it has adherents in the House of Representatives—which would give Federal employees the Friday off when a holiday falls on a Saturday.

We have always felt that an employee under civil service is in numerous respects

much, much better off than an employee in business, etc., or a self-employed man and woman. We have already more than ample legal holidays in the United States. There is no reason whatsoever to pile additional holidays unto the list. The employees will have to take the good with the bad, calendarwise. The rest of the gainfully employed people of this country—and they still comprise five out of six—are subject to the vagaries of the calendar, too. Why shouldn't Uncle Sam's people be subject to the same rule? The AFL–CIO American Federation of Government Employees has already figured out that two 1959 holidays—Memorial Day and the Fourth of July—fall on a Saturday and they hope the bill of Senator OLIN D. JOHNSTON (Democrat, of South Carolina), who happens to be the chairman of the Post Office and Civil Service Committee, will pass in time to make it law during the current year.

We hope it will not pass, and we hope President Eisenhower—not beholden to anyone—will veto it if it should pass.

Economy begins at home. These extra holidays cost the taxpayer a terrific amount of extra money and they are wholly inequitable. Let Congress prove in each and every case that its Members are truly economy minded and, once again, let them begin by cutting down in their own quarters.

These extra benefices are like a sickness. What is good for Federal employees is just as good for State and municipal employees. And they will follow the pattern set by Washington very quickly.

There is a job to be done to bring this country out of its present fiscal misery. Many a man, beset with income worries, has to work extra hours and extra days in order to make ends meet and to fulfill his tax commitments. The civil service employees of every type should waive all such special privileges and pitch in to bring us back to normalcy. Maybe then we can discuss the question of "extra days off"—but not now.

## The Aid To Education Bill—A California Teacher's Plea

EXTENSION OF REMARKS
OF
### HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 26, 1959*

Mr. ENGLE. Mr. President, hearings were recently completed on the Murray-Metcalf Federal-aid-to-education bill, of which I am a cosponsor. During those hearings a great deal of serious testimony was received pointing up the critical inadequacies in our schools. Indeed, the picture painted was a very gloomy one. Recently I received a letter from a teacher in California which recalled to my mind the words of a writer who observed that there is always a touch of comedy in the worst of tragedies. For that touch of comic relief, I commend this letter to the attention of my colleagues. I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

The Onerabil CLAIR ENGLE,
*Yewnited Statts Senet,*
*Senet Awfuss Bilding,*
*Warshington, D.C.*

DEAR ONERABIL: I yam a teecher in Californya, and I yam riting to yew to ask yure suport of the Murray-Metcalf bill. You may knot be awear that the shortij of funds for edjicashun has efekted the kwality of teechers in yure stait, butt this leter may sho yew wy it is necessery for teechers to get more pay, if yew want to get beter teechers. Just to sho yew how despirit the sitchewashun is—I yam a speling teecher.

I no that after reeding this letter, yew will giv the pasij of this bil yure imediut atenshun.

(P.S. I sugjest that yew luk intoo the teachers colidj sitchewayshun allso.)

## Statesman Bernard Baruch Warns of Dangers of Inflation and Apathy

EXTENSION OF REMARKS
OF
### HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Thursday, March 26, 1959*

Mr. KEATING. Mr. President, Greater Rochester Commerce, the magazine of the Rochester, N.Y., Chamber of Commerce, recently published a penetrating editorial by Bernard Baruch. This statesman's succinct commentary on the dangers of American apathy in general, and in particular the apparent unconcern on the part of many people about the dangers of inflation, deserves a wide reading.

Mr. Baruch points out clearly the manner in which inflation robs the pay envelopes and pocketbooks of every citizen—how it affects the lives of each and every one of us. Because of the importance of the message it conveys, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN EDITORIAL
(By Bernard Baruch)

Allow this malady to run unchecked and it will impoverish the people and destroy a nation.

Down deep in our hearts we know how to cope with inflation; how to assure our security; how to overcome all the other dilemmas that beset us.

We know that it requires self-discipline and a subordination of personal interests to the national interest.

We know that it means self sacrifice—universal in character.

Have we lost the strength of character to do this? Have we grown so apathetic that we will not rouse ourselves before some terrible tragedy overwhelms us?

In time of peril, apathy is an unforgiveable sin, the irredeemable error. History and tradition tell us that great nations have died as much from internal decay as from external blows.

Rome fell not because the barbarians swarmed in but because the character of her citizens grew soft. And their capacity for self-discipline waned.

Will future historians come to the same conclusion about us?

It seems to me that we Americans have grown indifferent to the crucial issues confronting us—issues which will govern our future and our children's future.

I meet so many people who have lost, if they ever had it, the capacity for indignation. The public's attitude toward inflation illustrates a point.

Inflation is a cancer which is eating away at our economic and financial health. It is undermining our security and spiritual strength as well.

It is responsible for much of the burden of taxation we bear; of the swollen prices we pay; of the debt with which our government is saddled; of the devalued savings of the little people who suffer most from it.

## Area Redevelopment

EXTENSION OF REMARKS
OF
### HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 26, 1959*

Mr. SCOTT. Mr. President, during the recent debate on the area redevelopment bill a great deal was said about the Douglas bill going so far as to invite a veto, whereas the administration bill was not adequate to accomplish what was desired. At that time I offered a compromise bill, which in my opinion, would have provided a safe margin in both directions.

An editorial appearing in the Scranton Tribune on March 25 comments favorably upon the compromise approach, and, considering that this editorial comes from one of the hardest hit depressed areas in Pennsylvania, it is worthy of notice.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICS OR AID?

The slim margin by which the Senate passed the so-called distressed area aid bill is hardly a good portent for the success of Federal assistance to areas suffering from chronic unemployment.

The measure passed by a vote of 49 to 46 in the face of a White House threat to veto it. The affirmative votes are 17 short of the two-thirds majority which would be required to override a Presidential veto.

The bill which squeaked through would provide some $399 million in loans and grants by the Federal Government to areas of excessive unemployment. The money would be used to purchase machinery and equipment, to build plants and to provide public facilities; retrain workers and pay them while in training.

President Eisenhower believes these things should be done but he realizes, as we here in Scranton and northeastern Pennsylvania know by experience, that they cannot be done in 1 year or 2 or 3. We've been at it for some 15 years and we're still in the process of economically rehabilitating our community.

And because this is a long-term process the President sees no reason for a huge appropriation in any one year's budget. He said so when he vetoed a similar bill last year. And that bill called for an appropria-

tion of $100 million less than the present one. As a matter of fact the current one asks for more than seven times as much money as the President has recommended for this aid in the fiscal year ahead.

So the likelihood of a veto of a measure of this proportion seems a foregone conclusion.

Yet the Democratic leadership of the Senate showed no inclination to compromise despite the fact that there was a very good compromise bill before the upper House. That bill was introduced by Senator HUGH SCOTT, of Pennsylvania, who is well informed on the economics of distressed areas. His bill called for $200 million in appropriations. It was promptly rejected by the Senate.

But an idea of the real thinking of the Senate membership concerning Federal aid for distressed areas was quite evident, we think, in the Senate's vote of rejection of the President's own bill which called for a $53 million appropriation. This measure missed being passed by but a switch of five votes.

Thus it should seem obvious that if the Democratic leadership in Washington is sincere in its expressed desire to assist jobless areas it must submit to a compromise. If it does not it leaves itself wide open to the charge that it is simply playing politics—as it played politics a year ago with this type of legislation.

And the temptation to make a campaign issue of this legislation is very great indeed. For last year it accounted for the defeat of several Republican Senators and even more Republican Representatives, including the one from our own congressional district.

However, the Democrats can go to the well too often. And perhaps the better judgment of some among them in Washington will prevail in this instance and a second attempt to make a political football of the jobless will be ruled out. If that develops it will mean a compromise.

To the communities facing up to the problem of unemployment a compromise would be much more preferable than a campaign issue. For the compromise would mean the start of Federal assistance. It would mean, too, the end of political maneuvering in Washington for partisan advantage.

## GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
## HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 26, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Daily Radio Roundup dated March 24, 1959, prepared by the GTA Public Relations Department, of St. Paul, Minn.

There being no objection, the Radio Roundup was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP

The National Federation of Grain Cooperatives convened today in its 20th annual spring conference in Washington, D.C.

This organization was established about one year after GTA began business. M. W. Thatcher, general manager of GTA since its beginning, has also been president of the National Federation since the group's inception. It was his idea that the several cooperative grain marketing associations in the United States operating on the principal terminal markets could be of further value by having an organization of their own. The thought, naturally, was the possibility of influence in matters of general interest, such as legislation, transportation, and related fields.

There were seven federation members in the beginning. There are now 24, operating on the terminal markets in 18 States. All of the co-op agencies in the country handling substantial quantities of grain are members of the federation. About one-third of the members are affiliated with the Farmers Union, another third with the Farm Bureau. The remaining third is a combination of affiliations such as the Grange, Equity Union, and some special-crop co-ops.

Through the federation, all of these co-ops, regardless of ownership, work together on the national front for better legislation for farm families and their co-ops. Thus they are continuing what was done for many years by the three largest general farm organizations—the Farmers Union, the Bureau, and the Grange. During the years that Ed O'Neill was president of the National Farm Bureau and Louis Tabor was master of the Grange, they worked hand-in-hand with the National Farmers Union on all matters of general farm interest on the national front.

The three organizations worked together to draft and promote the McNary-Haugen bill. After this bill was vetoed by President Coolidge, the three organizations went right to work and got it passed again. Again President Coolidge vetoed it, and again the three organizations got busy, working as one, and led in the formation of the Corn Belt Federation. They continued to work together on the national front until age and ill health forced O'Neill to retire. Tabor also retired a short time later for the same reason.

The rank and file members of all farm organizations know they have the same basic problems regardless of commodities produced. None get prices which return operating expenses, depreciation, interest on investment and wages for management and labor of the family comparable to that of other segments of our society. This leaves a weak section in the national economy with debilitating effects across the board.

A perennial job of the federation is fighting the attempts of certain interests, working through the National Tax Equality Association, which are trying to have the regular corporation income taxes applied to the savings of the co-ops. We mentioned this in our commentary yesterday. The federation has been an effective influence in presenting to the committee of Congress facts and figures correcting the misleading presentations of NTEA on this score. The high caliber of the witnesses and the material presented has gained the respect of the members of the committees and the entire Congress. This will be repeated this year since the issue is before the Congress with even more force, coming as an administration measure with some new gimmicks.

More and more these events prove the necessity of organization. More and more world events prove the need of applying the principles of cooperation to everyday living. Sincerely believing this we remind you that GTA is the co-op way.

## An Adequate Armed Forces Airlift

EXTENSION OF REMARKS
OF
## HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 26, 1959*

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial and an article from the Army-Navy-Air Force Journal of March 28, 1959, the editorial entitled "The Nation Can Have a Modern Airlift," the article entitled "Senator MONRONEY Pushes Plan To Buy 400 Modern Cargo Planes To Boost Airlift."

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From Army-Navy-Air Force Journal, Mar. 28, 1959]

THE NATION CAN HAVE A MODERN AIRLIFT

The interest and industry being shown by Senator A. S. MIKE MONRONEY (Democrat, Oklahoma), in behalf of the Nation's airlift needs, both military and civilian, substantially improves the prospect of a modernization in this vital and neglected area.

As chairman of the Aviation Subcommittee of the Committee on Interstate and Foreign Commerce, Senator MONRONEY is known as the Senate's authority on civil aviation, but his interest in the military needs is no less intense. He feels, and has told the Senate on numerous occasions, that the airlift needs of the Armed Forces have been "completely disregarded" and he has expressed dismay that the Administration has neglected to spend the $140 million the last Congress appropriated to buy modern aircraft for this purpose.

As reported on the first page of this issue, the Senator is working assiduously on a plan for the procurement of 400 modern, high-performance cargo aircraft, 100 for MATS and the balance for the civilian airlines. The latter would be both a strong contribution to the national economy and would constitute a valuable reserve for the military forces.

The agenda for Senator MONRONEY's plan provides that an agreement must first be reached between the military and civilian operators on an aircraft which would meet both of their needs. Consideration of the financing of the project would then be undertaken.

As to this phase of the project, we recall the plan put before the Dallas meeting of the Air Force Association last September (see the Journal of September 27, 1958) by Dr. Allen R. Ferguson, director of research at the Northwestern University Transportation Center. Dr. Ferguson, one of the Nation's outstanding authorities on transportation, proposed that the Air Force enter into contract with a private firm to purchase modern air transports and rent them to the Government under agreed conditions and at agreed rates. This, he contended, would obviate the immediate appropriation of large sums of money, yet would meet the airlift requirement rapidly.

A similar plan, operated either by private capital or by a Government controlled corporation, would certainly be feasible to finance Senator MONRONEY's proposal.

The Department of Defense and the administration admit the need for improved airlift but have given it low priority under the contention that the need is greater in other areas. We hope, now that Senator MONRONEY is showing the way, they will cooperate in working out a plan which will fill this gap in our defenses.

[From Army-Navy-Air Force Journal, Mar. 28, 1959]

SENATOR MONRONEY PUSHES PLAN TO BUY 400 MODERN CARGO PLANES TO BOOST AIRLIFT

Senator A. S. MIKE MONRONEY, Democrat of Oklahoma, sees ultimate hope for building an adequate Armed Forces airlift under a plan involving the purchase of 400 high-speed, high-performance cargo aircraft standardized for use by both the Military

Air Transport Service and commercial airlines.

The Senator and members of the Aviation Subcommittee of the Senate Committee on Interstate and Foreign Commerce, of which he is chairman, have begun work on the project.

On March 19, Lt. Gen. William H. Turner, USAF, MATS Commander, and members of his staff were called before the subcommittee in executive session. They gave the committee a briefing on the present capabilities of MATS and its readiness to meet its war commitments. No details were released, but Senator MONRONEY told the Journal his group discussed with MATS leaders the essentials of what it would take to modernize military airlift.

Previously Senator MONRONEY, accompanied by Senator STORM THURMOND, Democrat of South Carolina, and CLAIRE ENGLE, Democrat of California, visited Dover Air Force Base, Del., where they inspected MATS equipment and conferred with Maj. Gen. William Stone, Eastern Transport Air Force commander, and Brig. Gen. Robert J. Goewey, 1607th Air Transport Wing commander.

Among the big aircraft they inspected there were the Douglas C-133 Cargomaster, which recently set new world's cargo-lift record and the Douglas C-124 Globemaster, which was used to support American troops in the recent Middle East crisis. Also shown was a Lockheed C-130 turbo-prop powered aircraft, used by the Tactical Air Command in the rapid transport of Army troops.

The first step in the Senator's plan is to settle upon a modern, high-performance cargo aircraft suitable for use both by MATS and the civil airlines, scheduled and nonscheduled. Such aircraft, he said, should be of low operating cost and designed so that when built in quantities the unit price would be low enough to offer the possibility of transporting cargo at about 4½ cents per ton-mile.

The first step in Senator MONRONEY's program requires agreement among the military and civil airlines on a suitable design. The next step, he says, would be to determine a way to purchase and distribute the aircraft.

He feels that if 400 were bought, 100 should go to MATS and the balance to civilian operators under terms requiring that they be ready for emergency military use on a few hours' notice.

Senator MONRONEY's next move will be to discuss the proposed solution with civil airline operators and with the airframe manufacturers.

Senator MONRONEY said in an interview he believes that his plan is thoroughly feasible and that it would contribute enormously both to the military preparedness of the Nation and to the national economy through the availability of swift airlift at reasonable prices.

He will introduce a bill, but not until agreement has been reached among all concerned and the details thoroughly worked out.

## Aid to Depressed Areas

EXTENSION OF REMARKS

OF

### HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Uniform United States?" which appeared in the Washington Post and Times Herald this morning, and also an editorial entitled "Inviting a Veto," which appeared on March 25, 1959, in the Pittsburgh Post-Gazette.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Mar. 26, 1959]

A UNIFORM UNITED STATES?

The Senate has gone too far, we believe, in the program of aid to depressed areas which it approved the other day. The $389 million loan and grant authorization which it has sent to the House is more than a third larger than the bill vetoed by the President last year and seven times the size of the Eisenhower proposal in this field. Obviously its proponents are inviting another veto, presumably in the hope of reaping a second crop of the political dividens which last year's go-round appeared to yield in some economically distressed states. A vetoed bill would be of slight help to the depressed areas, of course, but beyond this it may be questioned whether the rather ambitious program favored in the narrow Senate vote is really a sound prescription.

No Federal program could hope, of course, to provide even a tiny portion of the capital investment that a real industrial development or conversion effort would require. Such funds must come from private sources. What is mainly required in areas suffering from the effects of technological changes, resource depletion, or other such factors is a survey and promotion of new opportunities. Here local and State governments can help—even to the extent of temporary tax concessions and the like in some cases. A modest Federal supplementation of such efforts might be useful. But in general, with the economy's high rate of capital accumulation and the general flexibility and initiative of American business, real opportunities will not be long neglected.

Extensive subsidization of an area that may be "depressed" today would be hard to end, and even in the short run would tend to work against the interests of more prosperous regions with certain natural advantages. How could such a program possibly be administered with fairness to all sections of the country and without running into disputes concerning every effort to help that would, in the end, probably be settled on a political rather than an economically realistic basis?

For industrial and agricultural workers disadvantaged by sudden changes beyond their control there ought, of course, to be more adequate programs of unemployment compensation and job placement than now exist in most States. A retraining program in which industry would participate (in order to insure real utility) would be helpful. But if the Government were to go much beyond such measures and endeavor to maintain some kind of uniformity of economic progress and prosperity in so large and heterogeneous a nation as this, it would obe embarking upon a program that would require far more money than anything yet proposed—and far more wisdom in its administration than seems likely to develop. In any case, the Senate bill faces an almost certain veto if enacted, and the House ought to refashion it along more reasonable lines.

[From the Pittsburgh Post-Gazette, Mar. 25, 1959]

INVITING A VETO

One must wonder at the atmosphere of unreality in which a majority of the Senate has approved a bill to provide up to $389,500,000 in loans and grants to the Nation's chronically depressed areas. That is a sum far greater than the President is expected to approve. It is almost as if the Senators deliberately doomed their own legislation by pegging it to an impossibly high figure.

Surely the Senators were well aware that only last September President Eisenhower vetoed a similar measure which called for about $100 million less than is provided in the present bill. The President said then that the terms of the measure were too generous and that it was poorly conceived.

It isn't that the President is against aid to depressed areas—those areas which, like Altoona, Erie, Johnstown, Scranton, and Wilkes-Barre, have records of chronic unemployment. But the Senate has approved a bill which calls for spending more than seven times greater than the $53 million requested in the administration's proposal.

We do not presume to set an exact figure which the Federal Government should provide for relief to depressed areas. Where there is such a great disparity between what the administration feels is needed and what the Senate majority has called for, clearly there is much room for guesswork.

It occurs to us, then, that Pennsylvania's Senator HUGH SCOTT was on the right track when he proposed an amendment which would have set assistance at a compromise figure of $200 million. Perhaps the President could be persuaded to approve that amount.

But the Scott amendment was defeated. If there is to be any compromise, it will have to be worked out with the House, which must now act on the proposal. If the House will approve a depressed areas bill at a figure substantially below that set by the Senate, then perhaps the two Houses can agree upon a compromise figure acceptable to the President.

Otherwise, the legislation is doomed to another veto and the unemployed in the Nation's depressed areas must wait at least another year for the Federal assistance which the executive and the legislative branches of the Government agree that they need.

## The Corn Tassel as the National Flower Emblem

EXTENSION OF REMARKS

OF

### HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have a resolution adopted by the Peoria Junior Chamber of Commerce, favoring the adoption of the corn tassel as the national flower emblem printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION—LET US MAKE THE CORN TASSEL OUR NATIONAL FLORAL EMBLEM

Whereas it was Indian corn, the New World grain which sustained life in the first courageous settlers on this continent, and

Whereas this same Indian corn or maize became the basis of the agriculture of the Colonists and pioneers, later of the States and the Nation, and

Whereas corn grows in and is an important commodity in every State; is essential to our diet, our industry, our economy, and

Whereas corn is closely identified with this country and with her bounty to other peoples in other lands, and

Whereas corn has a flower, the tassel, which is uniquely American and distinctively beautiful, and

Whereas the Minnesota Jaycees, Minnesota Grange, Minnesota Business and Professional Women's Club, Minnesota Federation of Women's Clubs, Minnesota Legislature, and the National Grange have also passed similar resolutions, and

Whereas Senator DOUGLAS of Illinois and Congressman WALTER JUDD of Minnesota have introduced joint resolutions in Congress; now, therefore be it

*Resolved*, That the Illinois Junior Chamber of Commerce through action taken at a meeting of its board of directors on February 8, 1959, endorse the work of these organizations and urges the adoption by the U.S. Congress of the corn tassel as our national floral emblem, and the President of the United States is requested to declare such fact by proclamation.

## The District of Columbia Garnishment Law

EXTENSION OF REMARKS
OF
## HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by Emil K. Melin, of Arlington, Va., relating to the District of Columbia garnishment law, together with an enclosure, and a letter he has written to Representative JOHN DOWDY on the same subject.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

ARLINGTON, VA., *March 25, 1959.*

Senator WILLIAM LANGER,
*U.S. Senate,*
*Washington, D.C.*

DEAR SENATOR LANGER: On page 2 of today's Washington Post I note that you and Senator OLIN D. JOHNSTON have introduced bills to repeal the District of Columbia garnishment law.

I strongly favor such repeal as will be seen from the enclosed copy of a letter I wrote to Congressman DOWDY on March 18, 1959.

You will note that toward the end of page 1 of my letter I suggested the advisability of considering an idea put forth by Mr. John L. Schroeder, attorney representing the Metropolitan Businessmen's Association.

I have been told since I wrote my letter to Congressman DOWDY that Mr. Schroeder's plan would provide for a debtor to be called in and ordered by the court to pay a certain amount each week on his debt. If he failed to pay, he would be put in jail.

I am unalterably opposed to any such thing as that. We certainly do not want a debtor's jail in the Nation's Capital.

With best good wishes, I am,

Respectfully,

EMIL K. MELIN.

[From the Washington Post and Times Herald, Mar. 25, 1959]

TWO SENATORS ACT TO REPEAL CITY'S GARNISHMENT LAW

A bill to repeal the District's garnishment law was introduced yesterday by Senators OLIN D. JOHNSTON, Democrat, of South Carolina, and WILLIAM LANGER, Republican, of North Dakota.

JOHNSTON told the Senate his wife was threatened and insulted a few days ago because someone working for us had not made prompt payments.

He said "certainly that experience has awakened me to what is going on." Under the garnishment law, he declared "milk is literally taken out of babies' mouths."

When he was Governor of South Carolina, JOHNSTON said, he would have vetoed legislation like the District's garnishment law, if any came before him.

Another measure to halt attachments of earnings, sponsored by Representative JIM DOWDY, Democrat, of Texas, is pending in a House District subcommittee along with other garnishment reform bills.

In a speech on the Senate floor, LANGER said repeal of the antique law would be a great service for the many poor and needy people in this community who are at the mercy of easy credit racketeers.

He asked permission to insert in the CONGRESSIONAL RECORD a recent series on garnishment published in the Washington Post. He said the articles amounted to a condensation of testimony that would be received in a hearing.

ARLINGTON, VA., *March 18, 1959.*

Hon. JOHN DOWDY,
*U.S. House of Representatives,*
*Washington, D.C.*

DEAR CONGRESSMAN: In a special article in yesterday's Washington Post I saw that you have introduced a bill which would eliminate garnishment of wages altogether.

Were I a Member of Congress I would certainly support you. In my opinion garnishment of wages is about as obsolete a theory as the old laws which permitted imprisonment for debt.

I am a 64-year-old retired official of the Washington office of the Internal Revenue Service, having retired August 1953 after 30 years service. Although I have never practiced law, I have been a member of the District of Columbia bar since 1927. My wife and I have resided at the above address in Arlington for almost 29 years.

Back in 1933 and 1934 I had a neighbor (he died several years ago) who was superintendent of maintenance for the Arlington division of the C. & P. Telephone Co. He often mentioned the trouble and loss of time caused him by various Washington concerns—garnisheeing the wages of employees working under him. He and I could never understand why these outfits—which generally sold unessential items like jewelry, etc., etc.—ever sold the employees in the first place, knowing their small incomes, family status, and so on. What was even less understandable was selling them again (and often again) after having had trouble collecting on the first and quite often the second transaction.

Articles which have appeared in Washington newspapers in recent weeks indicate that the situation is even worse than it was 25 years ago.

I quote from the Washington Post, article of March 17 by Staff Reporter Morton Mintz:

"John L. Schroeder, attorney representing the Metropolitan Businessmens' Association, asked for a change in the bar bill that would enable a creditor to bring any debtor—including Federal employees, whose wages cannot be attached—into court where he could be ordered to pay off his debt in installments. The employer would not be involved."

Since it is probable that your bill cannot be passed—although I believe it should be—it might be advisable to consider Mr. Schroeder's idea.

I would suggest one change. It should provide for summary dismissal of the suit if it is shown that the creditor has previously—on a different transaction, of course—brought the debtor into court, say within 2 or 3 years.

To me this would be only plain commonsense. If the creditor has had trouble collecting previously, he certainly should have had enough business sense to refuse credit in the future unless the buyer has had a substantial improvement in his financial status. If the creditor doesn't have such sense, let him stew in his own juice. Like the old common law adage about bad dogs: "A dog is entitled to the first bite." If the creditor puts himself in the way of a second bite, let him take the consequences.

I might also comment that employers should not be bothered with garnishee proceedings. They have enough trouble and expense with the withholding of income and social security taxes.

This letter is written on my own volition. It has not been suggested by any employer—in fact, I have had only one employer since 1923—good old Uncle Sam. I am merely interested in the general improvement of laws.

With best wishes, I am,

Yours respectfully,

EMIL K. MELIN.

## Michigan's Future Is Bright

EXTENSION OF REMARKS
OF
## HON. PAT McNAMARA
OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. McNAMARA. Mr. President, among the slanders which are being circulated about Michigan by those who do not know any better, or those who seek political ends, is that Michigan is somehow controlled by Walter Reuther.

Mr. Reuther is an outstanding leader of organized labor and a fighter for better living standards.

An article describing what Mr. Reuther thinks about Michigan and the charges concerning him appeared in the Detroit Times of Tuesday, March 24. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REUTHER WILL BET A BILLION ON MICHIGAN

(To the Reader: For a long time now wherever the names of Michigan and Detroit appear in newspapers and magazines they are attached to a group of slurs about economic climate, welfare state, etc. One of the names with which Michigan is beaten is "Reutherism." To clear up the question whether there is a problem here that is unique to Michigan the Times went to the man—Walter Reuther. No inferences should be drawn from this article that it is a commitment by

this paper to the views of the labor leader one way or another—THE EDITOR.)

(By Jack Crellin)

UAW President Walter P. Reuther is willing to bet a billion dollars on the economic and industrial future of Michigan.

The man around whom much of the controversy swirls when people discuss Michigan's so-called business climate, is the first to admit the State is in the midst of an economic crisis but he vehemently denies it bears a "union made" label.

He attributes Michigan's temporary plight to decentralization, automation, and the loss of defense work, and the Republicans.

But even these, he argues, are more than offset by the positive promises of the future.

This is a subject Reuther dearly loves to discuss.

He gets up from his kidney-shaped desk, unrolls a huge wall map of the United States and starts to talk.

"Look where Michigan is situated—right in the heart of industrial America," Reuther declares, bracketing an area from the east coast as far west as Kansas in his outstretched arms.

"There is not a State in the Nation which has a larger reservoir of skilled manpower.

UNLIMITED WATER RESOURCES

"We have unlimited water resources at a time when water is becoming increasingly important to industry.

"Our transportation facilities are without rival. We have the railroads and the Great Lakes. The St. Lawrence Seaway will bring the whole world to our door.

"We are the second fastest growing State in the Nation population wise. The only one ahead of us is California.

"We have all the elements needed to make tremendous economic progress."

These are some of the reasons why Reuther, as we said earlier, is willing to bet a billion dollars.

That's how much is currently held in trust in pension funds for UAW members who are employees of the automotive "Big Three"—General Motors, Ford, and Chrysler—and allied industries under contract to his union.

Reuther would like to see some of those dollars put to work right here in Michigan.

MILLIONS FOR LOCAL PROJECTS

So long as the investments are considered sound, Reuther said he saw no reason why millions could not be pumped into worthwhile local projects such as industrial rehabilitation, housing, medical facilities, etc.

At present at least 53 percent of the money in the funds is tied up in fixed income investments such as bonds, notes and real estate. Another 45 percent is in common stock.

Latest reports at Solidarity House, UAW headquarters, show real estate investments alone amount to $389 million.

This latter is a sore spot with Reuther.

He says most of it has been sunk into luxury housing projects in the east when it could have served an even better purpose—and could have been earning the same return—had it been invested here in Michigan.

And that is where the hitch in Reuther's offer comes in.

The funds are rigidly controlled by trustees named by the various companies. The union, through its own choice when the funds were first established, has no voice in how they are invested.

Reuther tried to crack this barrier in last year's negotiations with the auto industry. He asked that just a small percentage be allotted to worthwhile civic projects. The campaign was not successful but he has not given up.

MONEY BELONGS IN MICHIGAN

"Between 40 and 50 percent of the UAW's membership is in Michigan," Reuther says. "That money belongs to our people. It does not belong to either the companies or the trustees.

"We are not trying to dictate how it should be invested. We merely say that if a builder in Long Island wants $20 million and a builder in Detroit wants the same amount, consideration should be given first to the Detroit request."

Some idea of what Reuther's plan would mean to Michigan and Detroit can be gathered by considering a bill proposed in Congress by Senator PAUL DOUGLAS (Democrat, of Illinois). The Douglas bill, which Reuther is supporting vigorously, would provide only $389 million of Federal funds to aid distressed unemployed areas in the way of loans for new industrial building and equipment.

Michigan's share would be about $17 million, according to one estimate.

While seemingly a drop in an immense bucket, people like Governor Williams and Mayor Miriani agree that even that would help.

EMBITTERED BY SMEAR CAMPAIGN

Reuther is bitter about what he calls the smear Michigan campaign. He says it is strictly political, probably would not even have occurred had there been a different Governor—a Republican—in Lansing.

"The people responsible," he says, "have done a great disservice to our State. They have hurt us with their untruths and distortions."

What about taxes? Will tax increases proposed by Governor Williams and supported by the UAW drive industry out of Michigan?

"Nonsense," says Reuther. "There are 30-odd States in which the tax burden is greater.

"Besides, if claims about the present taxes were true the Republicans would have to assume the blame because they are the ones who were in control and passed the tax laws."

In the same breath he points out that one national magazine which went to great lengths to prove Michigan was on the financial rocks, in the same issue reported that at least 75 percent of the other States are also having trouble.

UNEMPLOYMENT COMPENSATION ISSUE

Reuther minimizes the effect liberalization of the unemployment compensation law would have here.

"In this respect, Michigan is just catching up to many other States," he says.

Even the recent decision of the Democratic-controlled Michigan Supreme Court under which employees of a multiplant corporation were held eligible for jobless benefits if idled by a strike in one of the plants is not so revolutionary as it might seem, according to Reuther.

He says a survey shows the ruling would have been the same in at least 37 other States.

What about charges the UAW, through insistence on so-called pattern settlements, has driven smaller employers in the State out of business?

"We have never attempted to mechanically apply a rigid economic pattern," says Reuther. "Neither have we been willing to subsidize inefficiency on the part of management. Wherever there have been sound economic reasons that justified a less-than-pattern settlement we have gone along."

He cited contracts showing the union, in the case of some employers, has made radical adjustments, in some forgoing increases and, in a few, even accepting wage cuts.

"For obvious reasons we don't try to make headlines out of such incidents," Reuther commented with a grin.

THEY'RE WHISTLING IN THE DARK

Employers who claim they are moving out of Michigan to escape high wage rates are whistling in the dark, Reuther said.

"The small guy might be able to hide out for a while in a corner of Arkansas but eventually his plant is going to be organized and he is going to have to pay a living wage," Reuther said.

Reuther insists that wage levels insisted on by his union and others are not a real factor here in Michigan.

"Ford plants pay the same rate for the same work regardless of where they are located in this country," Reuther pointed out. "The differential between General Motors plants is only a matter of pennies.

"People who claim the auto industry is leaving the State because of the union just make themselves look ridiculous.

"The reason for the shift is economic. The companies are decentralizing to be closer to both their sources of material as well as their markets."

Reuther thinks the fact the UAW is a large organization is good for both the State and the country.

"Being big we can carry out our contractual commitments," he says. "Sure we have disputes but balance them out against our record of stability and you get an entirely different view of the situation. But our critics don't talk about those things.

COMMENDED BY WAR LABOR BOARD

"Why, during World War II we were publicly commended by the head of the War Labor Board for having the best record of stability on war production in General Motors plants of any union in any major industry in the country. We are proud of that record."

It is his opinion that the auto companies, with the possible exception of American Motors President George Romney, share his feeling that it is good business on their part to deal with a big union.

Reuther is justifiably concerned about the fact there are upwards of 300,000 unemployed in Michigan.

He points out, however, much of this is traceable to a shift in the country's defense needs. Since 1953, he says, 189,000 defense jobs have been wiped out because of the emphasis on aircraft and missiles rather than on tanks and other types of ordnance.

EAGER TO FREE PENSION FUNDS

One of the keys to solving the State's unemployment dilemma, Reuther said, is the diversification of industry. Hence his interest in freeing pension funds and winning support for the Douglas bill.

What about claims that he controls Governor Williams?

"Nothing could be more ludicrous. I actually see him only three or four times a year and then usually on a public platform. I have never sought to influence him and he has never sought my advice.

"I think that if anyone can control a person in public office he isn't worthy of holding public office. If I thought I could control Soapy Williams I would be opposed to him."

Reuther would like to see industry, labor, and government tackle the problems of Michigan in a joint endeavor.

"And we can make progress if we work together," he says.

"The UAW is willing to sit down with anybody at anytime. We have been willing for years."

Because Detroit is its home town, the UAW takes a particular interest in industrial rehabilitation.

Reuther pointed to the fact that where the city took the initiative and began to clear the way for light industry in the Milwaukee-Junction area it has more applicants than land available.

He agrees that there will probably never be as many industrial jobs available as in the heyday of the auto industry, but he adds:

"By industrial rehabilitation, we can bring industry in here and maintain the city's tax base.

"Industry wants to come here—don't let anybody kid you about that—but the sites are just not available."

---

## The Battle To Save the Dunes on Lake Michigan

EXTENSION OF REMARKS
OF
## HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. DOUGLAS. Mr. President, we are engaged in the battle to save the dunes of Lake Michigan, which are threatened with final destruction by the erection of steel mills by the National Steel Corp., headed by Mr. George M. Humphrey, the former Secretary of the Treasury and by the Bethlehem Steel Corp. The St. Louis Post Dispatch printed an excellent article on this subject, and I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BATTLE TO SAVE THE DUNES ON LAKE MICHIGAN

(By Dickson Terry)

GARY, IND., March 14.—Along the shores of Lake Michigan in northern Indiana is an area known as the Indiana Dunes. Originally it was a strip of land 26 miles long, an area long recognized as unique by geologists, botanists and people interested in conserving our natural resources.

Today the dunes, or what is left of them, have become the center of an unusual battle between big business and conservationists.

On one side of the battleline are two big steel companies, Bethlehem and Midwest Steel, both of Pittsburgh. These two companies have purchased virtually all that remains of the dunes, a strip about 3½ miles along the lakefront and extending back 1 to 2 miles.

The steel companies plan to construct mammoth mills on the property. They have the support of big business in Indiana and of most of the politicians in the State.

On the other side are a group of conservation-minded people led by a women's organization and spearheaded by Senator PAUL DOUGLAS of Illinois. DOUGLAS, an ardent conservationist and a man who has known the dunes for many years, has introduced a bill in Congress to make the dunes a national monument.

The problem of the dunes, DOUGLAS said, is a symbol of the crisis that faces all America. "It is as though we are standing on the last acre, faced with a decision of how it should be used."

A secondary battle is being waged between the conservationist groups and the State Legislature of Indiana. The State has, for several years, been trying to get the Army Corps of Engineers to build a huge harbor in the very center of the remaining area. This harbor, it is charged, will not only further despoil this unique area but also would serve the purposes only of the two steel companies which plan to build there, and of the Pennsylvania Railroad, which operates near the area. And the railroad also owns 80 acres of the dunes.

The dunes have long been recognized as a natural phenomenon unlike any other in the country. The area has been described as a place where time stands still. It is a place of wild and lonely sand hills which, due to wind and erosion, are constantly changing. Among the sand hills are small lakes which furnish a refuge for migratory birds. There is even a bog of almost 100 acres which still has the mystery of untouched places.

Scientists from all over the world have come to the area to study the dunes. Numerous books have been written about the area by such eminent nature writers as Donald Culross Peattie and Henry C. Cowles, botanist at the University of Chicago.

"There are few places on our continent," wrote Professor Cowles, "where so many species of plants are to be found in so small a compass. Within a stone's throw of almost any spot one may find plants of the desert and plants of rich woodlands, plants of the pine woods and plants of swamps, plants of oak woods and plants of the prairies.

"Nowhere perhaps in the entire world of plants does the struggle for life take on such dramatic and spectacular phases as in the dunes. A dune in the early days of its career is a moving landscape, a place that is never twice alike. * * * Perhaps nothing in all nature except a volcano with its lava flow is to be compared with such a moving dune."

The dunes have attracted writers, painters and artists through the years, and they have been a playground for people of Indiana, southern Michigan and the Chicago area for half a century.

The battle of the dunes has, in a manner of speaking, been going on since 1916. Stephen Mather, then Secretary of the Interior and the father of many of our national parks, visited the dunes and recommended making them a national park or monument. But World War I came along and nothing was done.

As the years passed industrial development began to close in from both ends of the 26-mile strip. It was a women's group that took the first step nearly 40 years ago to try to save the dunes.

In 1921 Mrs. Frank J. Sheehan got the Indiana Federation of Women's Clubs to back a movement to establish a State park in the dunes. Mrs. Sheehan succeeded after 2 years work in getting a bill introduced in the legislature. Then she went before the legislators and their wives and gave a 2-hour lecture with stereoptican slides.

She pointed out that when the park movement started there were 15 miles of dunes left. By this time, in 1923, there were only 6 miles left. A bill was passed authorizing the purchase of 2,000 acres of what is now Dunes State Park.

Nothing further was done about saving the dunes until 1949, after a bill was introduced in the State legislature to enable the State to buy land in the middle of what was left of the dunes to build a harbor. Lovers of the dunes rallied at Gary. The only woman present was Mrs. H. H. Buell.

Mrs. Buell, who, with her retired husband, built a home a few years ago in Ogden Dunes, a residential area on the lakefront, has a very strong affection for the area. The dunes, it has been said, do something to people, and Mrs. Buell is no exception.

She is a gray-haired woman with considerable force. "I raised my voice at the meeting," she said, "and suggested that perhaps the women of Indiana could again do something. Everyone agreed it was a good idea, and somewhat to my surprise, they asked me to start it. I said I would try."

Mrs. Buell had never been an organizer, but she went to work. She called all the women she knew who felt as she does about the dunes and 25 showed up in her living room. They organized the Save the Dunes Council.

They started a membership campaign by letter and the organization grew from 25 to 1,500. Word spread among former residents of the area. Now they have enthusiastic dune savers as far away as Alaska, California, and Hawaii.

The original intent of the group was to raise enough money to buy the 3½-mile stretch that was left of the dunes. Their first move was in 1953 when one of the most picturesque parts of the area, Cowles Bog, went on sale for back taxes. The group raised enough money to buy 56 acres.

The women enlisted the support of the Indiana Federation of Women's Clubs, the garden, natural history, and wildlife clubs in servationists, a nationwide organization; the Izaak Walton League, and the Conservation Council of Chicago, which includes 66 garden, natural history, and wildlife clubs in and around Chicago.

They found themselves opposed by the State government, from Gov. Harold E. Handley down through virtually every member of the State legislature, all of whom favor the harbor and industrialization of the area. The conservation group was opposed also by Senator HOMER E. CAPEHART, Representative CHARLES HALLECK, in whose district the dunes are located, and other influential politicians. As for the rank-and-file politicians, they either favored more business in the area or they were apathetic toward the whole thing.

While the women were beseiging foundations and other philanthropies in an effort to raise money, the dunes became the center of considerable land speculation. Years ago land in the area sold for $50 an acre or less.

The women had hoped to buy it at around $300 an acre. Today it is valued at $2,750 an acre.

Most of the land was owned in 1953 by the Consumers Co., of Chicago, a company owned largely by Clint Murchison, the Texas multimillionaire. The company dealt in sand, gravel, and cement. It obtained sand from the dunes.

Beyond this the company saw another use for the area. It was ideal for industry, particularly if the harbor were built. In 1954 officers and directors of Consumers Co. incorporated Consumer Dunes Corp., whose purpose was to speculate in dune acreage, according to its report to the Securities and Exchange Commission.

In 1956, Lakeshore Development Corp. was incorporated and later that year Consumer Dunes started selling land to Lakeshore Development. Lakeshore Development, it was revealed, was set up to buy land for Bethlehem Steel Co., which now values it at $2,750 an acre.

Midwest Steel, in the meantime, had been buying land in the area over a period of years. Today Midwest Steel has about 750 acres, Bethlehem Steel has 3,800 acres which, except for the 80 acres owned by the Pennsylvania Railroad, is about all that's left of the dunes.

The parcel of land the women had hoped to buy would now cost millions, even if it could be bought, which appeared unlikely. Midwest Steel Corp., recently announced that a fully integrated steel mill would be built on its property on Lake Michigan.

Bethlehem announced plans to merge with Youngstown Sheet & Tube Co. and build a $300 million plant on the lakefront. The merger was disapproved by a New York court in January. A. B. Homer, president of Bethlehem, issued a statement that the termination of the merger plan "does not mean that the Bethlehem interests in the midwest steel market has lessened in any way. On the contrary, Bethlehem has already proceeded with studies to determine the best way in which it can expand its service to that market—particularly engineering studies as to use under existing conditions of Bethlehem's northern Indiana property."

A spokesman for Bethlehem told the Post-Dispatch that President Homer had no statement to make regarding the dunes or efforts to save them.

By the summer of 1958, it appeared that all was lost, and the work of 6 years by the women of the Save the Dunes Council had been in vain. They were about to disband. It was then that Mrs. Buell, knowing the reputation of Senator PAUL DOUGLAS as a conservationist as well as a man who loved the dunes, decided on a last step.

She didn't know Senator DOUGLAS, so she wrote to Mrs. Douglas, as one woman to another, and asked her to see if she could interest the Senator.

DOUGLAS, it turned out, had vacationed for years at the dunes when he was a professor of economics at the University of Chicago, and later as a Chicago alderman. DOUGLAS came in person to meet with Mrs. Buell and the women of the council. He walked again through the dunes, even rolled up his trousers and waded in Lake Michigan.

Then he returned to Washington and introduced a bill to make the dunes a national monument. Joining DOUGLAS as sponsors of the bill were Senators RICHARD L. NEUBERGER and WAYNE MORSE, Oregon Democrats, and JAMES E. MURRAY, Montana Democrat, all seasoned battlers for conservation.

"I am here," said DOUGLAS when he introduced the bill, "to make a last-ditch effort to prevent the imminent closing out forever of this last 4 miles of a 25-mile park. Plans are already being made and bulldozers are already at work to turn this great historic and scientific site into slag piles, mills, wharves, noise, pavement, and one more source of smoke and pollution."

"It would not only despoil what is left of the area," he said, "but the construction of mills will reach around and irrevocably damage the State park, polluting its water and air."

The bill is now in committee. If passed, it would authorize the Department of the Interior to buy back the land and preserve the dunes as a national monument, under the protection of the Government.

In the meantime, the Save the Dunes Council has set for itself the task of getting 1 million signatures on a petition to send to Congress. They already have 200,000 names. And they are writing to all signers, asking them to write to their Congressmen.

Many people, Mrs. Buell admits, are bemused by the battle of the dunes. That's because, she says, they fail to see it as a symbol of our rapidly disappearing natural resources.

Paraphrasing Senator DOUGLAS, the time may come, she says, when we may actually find ourselves standing on the last unused, unprotected acre—wondering which way to go.

## The Proposed Summit Conference

EXTENSION OF REMARKS

OF

### HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Lowering the Summit," published in the Washington Post and Times-Herald of March 26, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOWERING THE SUMMIT

President Eisenhower continues to show no enthusiasm for the proposed summit conference, but his comments at his news conference yesterday left the door open to a whole series of such conferences. The idea of periodic meetings attended by the top-ranking officials of the United States, the Soviet Union, Britain and France appears to have been brought to Washington by Prime Minister Macmillan. It is based on the theory that not much ice will be melted at the first session and that many conferences are likely to be necessary to produce any real East-West accommodation, if indeed any such accommodation at all is possible.

On this point, as on several others, the President is more inclined than Mr. Macmillan to attach reservations. Yet he was emphatic in saying that if "we have an atmosphere that permits of periodic negotiations" and if there is some hope of beneficial effects for the United States and the free world, he would "never decline to go along in that kind of effort." Certainly this is a sufficient endorsement to project the idea into the preparations for the confrontation with the Russians.

The President has reiterated his belief that a preliminary conference of foreign ministers must make some progress to justify negotiations at the summit. His view on this point undoubtedly diverges somewhat from that of Mr. Macmillan who appears willing to do business with Premier Khrushchev regardless of what may happen when the foreign ministers meet. But the difference may be more semantic than substantive. In any event, the test that the President proposes to apply to the foreign ministers' conference is elastic enough to cover almost any action that the administration may wish to take at the time.

It is interesting to note, in this connection, the President's comment that no substantial or valid agreement could be anticipated unless Khrushchev were pretty well in the picture. This does not mean, he said in effect, that Khrushchev could command, bluff, or blackmail any other official into attending a summit conference. Such a gathering must necessarily remain voluntary and acceptable to all the participants if it is to be useful.

The President's lack of exuberance about the prospective summit conference should help to deflate the exaggerated hopes that are often associated with it. The conference will be the first confrontation since Geneva of the chief spokesmen for two highly antagonistic and determined systems. The conflict between their interests in Berlin, and in all Germany and central Europe for that matter, is obvious and profound. Only a miracle could bring a broad-gaged settlement out of this kind of situation.

While they are preparing to negotiate in good faith and to offer every reasonable concession for the sake of reducing friction and healing open sores if possible, the statesmen of the West would do well to continue warning their people against exaggerated expectations.

## Tributes Paid to Founders of the University of North Dakota

EXTENSION OF REMARKS

OF

### HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two clippings from the Alumni Review of the University of North Dakota relating to Founders Day observances.

There being no objection, the clippings were ordered to be printed in the RECORD, as follows:

These university faculty and administrative staff members were honored at Founders Day observances for 25 years or more of service. They are E. V. Acosta, associate professor of modern and classical languages; Eva C. Ball, assistant director of the extension division and director of the stenographic bureau; Dr. Richard Beck, chairman of the department of modern and classical languages and professor of Scandinavian languages and literature; Dr. Margaret Beede, professor of English; Mary Butler, recorder in registrar's office; E. D. Coon, head of chemistry department and professor of chemistry; Adeline Hendrickson, business office cashier; John E. Howard, associate professor of music and band and orchestra director; John L. Hundley, head of physics department and professor of physics; Ruby McKenzie, registrar; Julia Mattson, assistant professor of ceramics; W. H. Moran, professor of chemistry; H. C. Rowland, head of music department and associate professor of music; A. K. Saiki, professor of pathology; R. C. Staley, chairman of mathematics department and professor of mathematics; O. H. Thormodsgard, dean of the Law School and professor of law; Ross C. Tisdale, professor of law; Felix Vondracek, head of history department and professor of history; George C. Wheeler, head of biology department and professor of biology; and R. B. Witmer, dean of the College of Science, Literature, and Arts.

TRIBUTE PAID TO FOUNDERS

John E. Fields, Los Angeles business executive and former university student, paid tribute to the men who contributed so much to the school in a Founders' Day address February 26.

"The institution you created is now, 75 years after, doing the job you intended in your deepest and innermost thoughts. The job you started, Founders, sirs, is being carried ahead capably by eager hands, and may you rest well in that assurance."

Fields pointed out the role of the university in directing and shaping the individual.

"It is in the process of lifelong reeducation that the inspirations and the disciplines of the university will come to the individual's aid, as he flexes himself to change, humbles himself to accept new ideas and understands the truth in whatever words it may appear."

PROFESSORS HONORED

Donald M. Gillmor, associate professor of journalism, and Elwyn B. Robinson, professor of history, received distinguished teacher awards at the Founders' Day banquet.

The $500 awards were presented by Dr. F. L. Grinnell, vice president of the U.N.D. alumni association. Gillmor received the award based on 5 to 12 years service, and Robinson received the award based on more than 13 years service.

Gillmor, a native of Fort Frances, Ontario, has been a member of the U.N.D. faculty since 1952. He received a bachelor of arts degree from the University of Manitoba in 1949 and a master of arts degree from the University of Minnesota in 1950.

WORKED ON NEWSPAPER

Before coming to U.N.D., he worked as a reporter and news editor on the Winnipeg Free Press. He has also had experience on the Fargo Forum and in the advertising department of the Grand Forks Herald.

Gillmor recently was awarded a $5,000 Danforth Teacher Grant for 1959.

Robinson, a native of Russell, Ohio, has been at U.N.D. since 1935. He received a bachelor of arts degree in 1928 from Oberlin College, Ohio, master of arts, and doctor of philosophy degrees from Western Reserve University, Cleveland, Ohio.

IN MANY GROUPS

He is a director of the North Dakota State Historical Society, a member of the North Dakota Theodore Roosevelt Centennial Commission, the American Historical Association, the Mississippi Valley Historical Association, and the North Dakota Lewis and Clark Sesquicentennial Committee.

Robinson's special interests are in the history of North Dakota.

Honored guests at the banquet were 20 faculty and staff members who have each served 25 years or more at U.N.D.

President George W. Starcher presented to each of the 20 a certificate of merit and a silver tray in recognition of loyalty and service given to U.N.D.

RECIPIENTS PRAISED

Starcher praised the recipients as the "men and women who were mainstays through the longest crisis in the history of the university, from 1930 to 1949."

"The medium through which the university's body of knowledge is transmitted, interpreted and made inspiring is the teacher, the instructor, the professor," he said.

He said we should be thankful that the university has perhaps more than its rightful share of such people.

"It is in honoring these people that, more than anything else we can do, pays the greatest tribute to the founders whom we honor tonight."

## Fortieth Birthday of the American Legion

EXTENSION OF REMARKS

OF

### HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. SCHOEPPEL. Mr. President, the March issue of the Sunflower Legionnaire, which is the official publication of the Kansas Department of the American Legion features a most interesting and informative article entitled "It's Our 40th Birthday." It tells of the birth and growth of the Legion, discusses its fight against communism and its community service, and concludes with a toast. This tribute is offered to the organization as the host of all the citizen armies of our time, manned by businessmen and laborers, professors and farmers, Protestants, Catholics, and Jews, colored and white, men and women, American patriots from 25 to 75—charter members of war, champions of democracy and soldiers of peace—who have put aside their uniforms but have never laid down their arms.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD this outstanding article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S OUR 40TH BIRTHDAY

The American Legion from coast to coast—with the aid of its Auxiliary—will celebrate the 40th anniversary of its founding March 15–17, 1959, with thousands of gay parties, charter night dinners, founder recognitions, continuous membership awards, dances and other events.

BORN IN PARIS

The American Legion was born at the historic caucus of the first American Expeditionary Force in Paris, France, March 15–17, 1919. Its organization was completed at the continental caucus in St. Louis, Mo., May 8–10, 1919. The first national convention following in Minneapolis, Minn., November 10–12, 1919.

GROWTH

It has come a long way since its cradle days.

The American Legion has grown to dimensions undreamed of by its founders. Today it is a three-war organization, drawing its membership from the eligible veterans of World War I and II and the Korean conflict. Today it has a membership of nearly 3 million, and an Auxiliary of approximately 1 million women.

This nationwide organization of the American Legion is the envy of many other groups. Its programs are carried on under the guidance of 12 basic national commissions and some 40 subordinate committees and boards. This national committee structure is paralleled on the State, district, and post levels, giving the American Legion a chain of command which can muster a nationwide strength behind its objectives.

FINANCIAL STABILITY

A majority of its 17,000 posts owns its homes.

The total financial worth of the American Legion today including its national, department, district, and post resources and assets, is estimated at more than $300 million. It has an annual operating budget of nearly $6 million. It has a $2,500,000 national headquarters building in Indianapolis, Ind.; a $750,000 structure in Washington, D.C., and another big office in New York City.

PREAMBLE

The classic preamble to the constitution of the American Legion is its pattern for a patriotic way of life. The ideals set forth in this preamble are translated into terms of worthwhile daily living, through unselfish American Legion services in the fields of Americanism, child welfare, rehabilitation, national security, and community betterment.

IDEA MEN POPULAR

Specialized American Legion activities are simply endless and new projects are constantly being started.

A veteran with original ideas of doing good for somebody through a new activity, is most welcome in the average American Legion post. If you can come up with a new project that captures the imagination—and you can capture a lot of imaginations in the American Legion—you can get the manpower to carry it to a successful conclusion. The American Legion offers fine leadership training, and countless prominent Americans first learned to think on their feet at American Legion post meetings; first learned how to win friends and influence people in American Legion activities, and first learned to develop their vision and imagination in drafting programs at American Legion committee sessions.

LEGION WORLD AN OYSTER

The American Legion world is your oyster if you want to expand your personal influence.

Are you interested in working with youth? The American Legion has junior baseball, the largest organized teenage sports program in America, and they're always needing coaches, umpires, ticket takers, etc.

Boy Scouting? Our posts sponsor more than 4,300 troops and packs, and constantly need scoutmasters and other adult guidance.

Music? The American Legion is one of the largest sponsors of junior bands, drum and bugle corps and color guards.

Or, how 'bout Boys State? American Legion school awards? oratorical contest? rifle clubs? etc.

The American Legion is a recognized leader in the field of child welfare, and has expended more than $148 million in emergency financial aid to needy children. Most of this money went for food, clothing, and medical treatments. Through its legislative efforts it has safeguarded the right of all children, contributed to the establishment of many public services, streamlined juvenile court procedures, probation adoption and guardianship laws, and raised the standards of the care of all American youngsters.

STRENGTHENING CHURCHES

Are you interested in churchwork? Look at the nationwide "Back to God" movement of the American Legion, with its three top nondenominational objectives of promoting daily family devotions, regular Sabbath attendance, and the religious training of youth. Look at the American Legion's grace cards, and traveler's prayer cards.

FIGHTING COMMUNISM

Are you interested in doing something about curtailing the rapid advance of un-Godly communism? The American Legion, in all its years of existence, has never compromised with communism or any other imported alien "ism" which is un-American in concept or design. We have been fighting Communists all these years, with education, exposure through publicity, legislative influence, and cooperation with law enforcement agencies. It is indeed comforting to know that the American Legion has always promoted—and always will promote—the best interests of America and of the defenders of America; the two go together. The American Legion believes there is no room in this country for apologetic Americanism, because patriotism is love of country and pride of country.

COMMUNITY SERVICE

Are you interested in community service? This particular year, each of the more than 17,000 American Legion posts are being urged to promote at least one extra community project; most of them are doing it, and they will need your help.

CONCLUSION

The programs which have been projected only scratches the surface. There's been no mention of what the American Legion is doing in national security, disaster relief, hospital and rehabilitation programs, looking after widows and orphans, promoting scholarships, National Education Association, and many other programs. There's just no end to what's doing in the American Legion for the public good.

From its beginning, the American Legion has realized that the downfall of every great empire in history was first preceded by a discount of public service, and they have done, and are now doing, something about it.

The American Legion continues to be the most outspoken patriotic force in our Nation. It never leaves any doubt as to where it stands on matters that affect the welfare of America and preservation of our free institutions. It always speaks out in crisp and salty language for what it considers best for America. It is equally militant in opposing all influences or activities which are considered dangerous and detrimental.

So this toast is offered: A 40-gun salute to the American Legion on its 1959 birth anniversary, as the host of all the citizen armies of our time, manned by businessmen and laborers, professors and farmers, Protestants, Catholics, and Jews, colored and white, men and women, American patriots from 25 to 75—charter members of war, champions of democracy and soldiers of peace—who have put aside their uniforms but have never laid down their arms.

## The Great Antagonism

EXTENSION OF REMARKS
OF

HON. BYRON L. JOHNSON
OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 26, 1959*

Mr. JOHNSON of Colorado. Mr. Speaker, I believe the Members and the citizens generally may be interested in this thoughtful article by a distinguished doctor. We must understand ourselves and each other if we would live in peace.

THE GREAT ANTAGONISM

(By Jerome D. Frank, M.D.)

The nuclear arms race poses a mortal and increasingly pressing danger to civilization. It is obvious that the chief source of peril lies not in the nuclear weapons but in the human beings behind them, and that therefore the danger can only be resolved by changes in human attitudes. As a psychiatrist I have been struck by certain parallels between the behavior of nations today and that of mental patients. Though such parallels are always open to question, calling attention to them may serve to stimulate thinking about the human problems of the arms race.

The prize for which the United States and Russia are unwittingly contending is mutual destruction, yet neither side seems able to change its course of action. A nuclear accident or error of judgment which could trigger a full-scale war becomes more probable with each passing day, as the power to fire nuclear weapons becomes ever more widely diffused and the warning time for effective retaliation steadily decreases. A year ago Gen. Omar Bradley put it this way: "We are now speeding inexorably toward a day when even the ingenuity of our scientists may be unable to save us from the consequences of a single rash act or a lone reckless hand upon the switch of an uninterceptorable missile."

Society reacts to this terrifying situation in two characteristic ways, both of which impede its solution. One is a remarkable indifference, probably best illustrated by the almost total apathy concerning civil defense in both Russia and the United States; the other is the building of still more nuclear weapons, thereby intesifying the behavior which created the problem in the first place. Psychiatrists are familiar with both types of reaction in their patients and have termed them "denial" and "repetition compulsion."

In psychiatric jargon, denial is a patient's attempt to deal with a massive threat by denying its existence. Examples are the patient with blindness due to brain disease who insists that he can see, or the patient in the back ward of a mental hospital who maintains that she is in a palace. The term is also used, perhaps unwarrantably, for the refusal of some mortally ill patients to accept the imminence of death. Since death is inevitable, it is perhaps just as well that no human being can steadily contemplate his own demise. In fact, without this safety device, life would probably be unbearable. So it is understandable that each person sees himself as surviving a nuclear war, and this is not affected by the fact that millions are faced with death simultaneously.

It is particularly easy to deny the dangers of nuclear weapons because they are both unprecedented and impalpable. Nuclear energy is of an order of magnitude far beyond anything human beings have experienced before, except possibly those who live on the slopes of volcanoes. The vast majority of Americans have never experienced even the destruction wrought by conventional weapons. Our land has not directly suffered war for about 100 years, and then only a small area was involved. It is impossible to imagine the destructive power of 20 million tons of TNT, which a single hydrogen bomb can generate, much less what it would mean if hundreds or thousands of hydrogen bombs exploded. Moreover, the nuclear threat does not impinge on any of the senses. Submarines lurking offshore, airplanes miles overhead, poised guided missiles thousands of miles away, even strontium 90 nibbling at our bone marrow are all tasteless, odorless, silent, invisible, and impalpable. As a result it requires a constant effort of imagination to be aware of their presence.

Denial of a danger prevents taking action to remove it. If the problem does not exist psychologically, there is no incentive to do anything about it. When death is threatened from sources beyond human control, denial is as good a way of handling it as any, since nothing can be done. But when the death threat is of human making and can be removed by human beings, then the tendency to deny its existence is tragic.

More alarming than the tendency to deny the dangers of the nuclear arms race is the fact that attempts to find solutions lead only to intensification of a course of action which enhances the danger. Why can we not change behavior which we know is only making matters worse? One reason may be that we are frightened, and anxiety if too strong tends to make rigid both perception and behavior.

Patients with emotional illness often show remarkable rigidity of behavior, which Freud labeled the repetition compulsion. They keep repeating the very acts which cause trouble for them. This seems to be partly a result of their chronic anxiety. The patient clings to a faulty solution to a problem because he is afraid to give it up. The more anxious a person is, the more rigid his behavior tends to become. Similarly, the more menacing the arms race becomes, the more frantically we build more weapons and the less we seem able to seek more sensible alternatives. Anxiety also tends to freeze one's perceptions of the world. There is nothing harder to stand than ambiguity, so when faced with a dangerous situation one tends to oversimplify it. Everything becomes black and white. So use a technical term, thinking tends to become stereotyped.

This is seen clearly in the stereotype of the enemy. No matter who the enemy is or who we are, the enemy tends to be perceived as intellectually inferior but possessed of an animal cunning which enables him easily to outwit us. The enemy is seen as cruel, treacherous, and bent on aggression. Our side is seen as intellectually superior but guileless and therefore easily victimized, peace-loving, honorable, and fighting only in self defense. These stereotypes are probably as old as the human race and may be related to the fact that we are group animals. All gregarious creatures from ants to man automatically fear and hate the stranger, and whenever a group feels threatened by another, these primeval feelings reassert themselves. It is remarkable how rapidly the stereotype of the enemy can be shifted from one group to another. Scarcely more than a decade ago, Germany and Japan were cast in this role and Russia was our noble ally. Russia has now changed places with Germany and Japan, and we are not even embarrassed by the memory of the recent pictures of these three countries.

The fact that the enemy—whoever he may be—is viewed as completely untrustworthy is a major source of tensions leading to war.

The terrible thing about the mutual distrust of enemies is that it is justified. Some enemies are untrustworthy to begin with, but all become so eventually. Enemies cannot trust each other because each is forced to act in such a way as to justify the other's misgivings. This is an example of what the sociologist Robert K. Merton has termed the "self-fulfilling prophecy."

The operation of the self-fulfilling prophecy is perhaps been seen in the behavior of individuals. All social behavior tends to elicit corresponding behavior from the person toward whom it is directed. Friendliness begets a friendly response, hostility a hostile one. So if you expect someone to react to you in a certain way, you may act toward him in such a manner that he reacts in the way you predicted. Thus you cause your own prophecy to be fulfilled.

This can be seen most clearly in psychiatric patients, because of the rigidity of their behavior. A good example is the paranoid patient who expects everyone to be his enemy. You may be disposed to be friendly when you first meet him. Since he is sure you hate him, however, he persistently rebuffs your advances and maintains a surly, suspicious manner. In the face of this you are very apt to come to dislike him. Thus he succeeds in confirming his prophecy that everyone is against him, and will be even more suspicious of the next person he meets.

The same kind of mechanism operates at the level of societies. Russia and the United States each claim to base their foreign policy on the premise that the other would attack if it dared, and so each behaves in such a way as to make an attack increasingly likely. As Gen. Douglas MacArthur pointed out in a speech to the American Legion in 1955, present tensions are "kept alive by two great illusions. The one, a complete belief on the part of the Soviet world that the capitalist powers are preparing to attack it; that sooner or later we intend to strike. And the other, a complete belief on the part of the capitalist countries that the Sovies are preparing to attack us. Both are wrong. Each side, so far as the masses are concerned, is equally desirous of peace. For either side, war with the other would mean nothing but disaster. Both equally dread it. But the constant acceleration of preparation may well, without specific intent, ultimately produce a spontaneous combustion."

The mutual expectancy of Russia and the United States that the other plans to attack leads each to negotiate to gain a supposed advantage, intensifying the mutual distrust. Russia wanted to ban atomic weapons when we alone had them; we want to ban outer space as an area of conflict now that Russia seems to be ahead in this field. We ring Russia with bomber and missile bases, she treacherously crushes Hungary and develops ICBM's, each thereby strengthening the other's fear of attack and increasing the probability that it will occur.

Another source of our inability to break out of our suicidal behavior pattern is that the existence of limitless destructive energy has drastically changed the traditional meanings of certain words and phrases, such as "defense," "national security," and "balance of power." Use of these in their former meanings has become so automatic that we no longer subject them to critical scrutiny, especially since their connotations are reassuring. As a result, we may commit ourselves to a false conclusion even before we have started to think. It is especially hard to realize that the words are being misused because everyone does it from partisans of world government to isolationists. Moreover the misuse is casual, as if it were self-evident, which helps it to escape critical scrutiny.

For example, we automatically refer to our nuclear arms policy as one of defense, yet there is no defense against nuclear weapons in the strict sense of the term. According to the dictionary, "defense" is "the state of being defended," and "defend" is defined as "to shield from attack or violence, protect." In preatomic days it was a comforting thought that for each new offense weapon,

a genuine defense was eventually developed. Even though the protection it afforded was never perfect, it was adequate. Today, when one fighter-bomber with nuclear weapons carries more destructive power than all the bombers in World War II, a defense that is even 90 percent effective would not prevent vast destruction. What is really meant by defense today is deterrence through threat of retaliation. But in using the word defense to justify continued arming, we automatically slip into thinking of it in its old connotation. For example, Robert Nathan recently spoke of our creating a massive defensive shield. There is no shield against nuclear weapons, but only a precarious balance of terror which is, at best, a brief reprive and which may, with luck, gain us enough time to find a better solution.

Another phrase which no longer means anything is "balance of power," and concepts implied by it, such as catching up with the Russians, are equally meaningless. For phrases implying relative strength have no meaning when each side can destroy the other many times over. What does "catch up" mean when, according to President Eisenhower, we can already bring near annihilation to Russia? And how do we know when we have caught up? We are said to have about 35,000 atom bombs; Russia 10,000. Are we balanced or not?

A third phrase which is rapidly losing its meaning is "national security." These words imply that one nation can be secure at the expense of the security of other nations. No nation can control the fallout it receives from atomic explosions anywhere in the world; soon no nation will be able to control its own weather. Every inch of the globe can soon come under observation or attack from earth satellites. Those who think in terms of national security already foresee America fighting Russia for control of the moon. In today's world, either all nations are secure or none is.

Finally, there is the word "stalemate." Those who feel we must continue the arms race argue that if we maintain the stalemate long enough, eventually things will somehow work out. This term, derived from chess, conjures up an image of static deadlock which involves no further threat to either side. The arms race is far from static. Each day it continues increases the chances of mutual destruction and decreases the chances of peaceful accommodation. The use of stalemate to describe this state of affairs can only lead to faulty thinking and a false sense of security.

One sign that a person's thinking processes have gone seriously awry is inability to detect absurdities. For example, if a patient can see nothing wrong with the statement, Bill Jones' feet are so big he has to put his pants on over his head, psychiatrists worry about the intactness of his intellectual processes. Our failure to take account of the changed meanings of words leads us to make statements which are almost as absurd. A recent editorial in the Baltimore Sun spoke of the grim business of balancing power against power as our only means of assuring peace. How can balancing power against power, which in the past has led only to war, assure peace? And what does it means to balance power against power after each side has enough power to destroy the other many times over? Pronouncements about American missile and bomber bases in the NATO countries contain a more striking absurdity, which passes unnoticed, perhaps because the contradictory thoughts do not occur in the same statement. The contradictory statements are that these bases will enable us to retaliate instantly, and that the missiles cannot be fired except after consulting with our allies.

This is the kind of semantic tangle in which we find ourselves today. We seem to have slipped into George Orwell's world of doublethink without knowing it.

To summarize: the inability of Russia and America to break out of the arms race may involve several psychological factors. Fear tends to make us deny the existence of the danger, especially since the threat lies outside previous experience. When we do face up to it, the same fear makes it difficult for each country to change the behavior which creates the danger, especially since each is forced to behave in such a way as to confirm the other's suspicisons—the self-fulfilling prophecy.

These social attitudes are probably as old as mankind. In the past they have regularly led to wars which destroyed small portions of humanity. From the standpoint of the human race this was tolerable, for there were always enough survivors. Now, for the first time, these attitudes must be drastically modified if the human adventure is to continue. The task is made more difficult because nuclear energy has changed the traditional meanings of certain words that we habitually use in thinking about the issues of war and peace.

Psychotherapy tries to produce beneficial changes of attitude in individuals. Whether principles of psychotherapy can be applied to societies is highly questionable, but the implications of certain of these principles for halting the nuclear arms race may warrant exploration.

Psychotherapy tries to help the patient to see his problems and his faulty solutions more clearly, as the first step toward finding better ones. At the same time, by offering emotional support, the psychotherapist tries to reduce the patient's anxiety and help him to find the courage to experiment with more flexible, less stereotyped ways of perceiving others and behaving toward them. By improving his ability to communicate with others, the patient gains more satisfactions and suffers less frustrations, thereby diminishing his anxiety. Thus a process of progressive improvement may be started. For this process to succeed, the patient must have confidence that the therapist is competent to help him and has his welfare at heart.

In attempting to apply phychotherapeutic principles to today's sick world, the obvious question is: Who is to be the psychotherapist? Who has the confidence of both the United States and Russia, and is viewed by them as compentent to resolve their differences? At first glance the question seems absurd, yet certain groups may potentially function in this way. The industrially backward and relatively unarmed nations, small and large, who can only lose by a nuclear war may be able through the United Nations gradually to modify the behavior of the major powers. Many nuclear physicists seem able to focus on the welfare or humanity regardless of the side of the Iron Curtain from which they come, and their prestige is great in all nations. That both Russia and the United States agreed to a conference to devise adequate measures of inspection of a test ban on nuclear weapons is a sign that both, at least provisionally, trust the other's scientists as well as their own.

Even in the absence of a psychotherapist, psychotherapeutic principles may be applicable to aspects of our present dilemma. For example, they suggest that it is vitally important for each person to make a constant effort to keep his thinking straight. One must fight the tendency to deny the extent and immediacy of the danger, and make sure the words one habitually uses in thinking about the problem are appropriate. Only in these ways can the real nature of the issues be kept clearly in mind.

The psychotherapeutic emphasis on improved communication seems especially relevant. Communication between Russians and Americans at every level should be encouraged. As we come to see each other engaged in our occupations at home, we may find grounds for mutual understanding which are now hidden by the stereotype of the enemy. Today Russian and American scientists collaborate successfully in the International Geophysical Year, athletes compete without bloodshed, and artists from each country have been enthusiastically welcomed in the other. So we may hope that expanded communication between Russia and the United States may, in time, help weaken the will of each to destroy the other without diminishing the will to compete by peaceful means.

But the beneficial effects of improved communication appear only slowly, and the danger increases rapidly. What is needed is a change in our behavior toward Russia today, especially at the conference table. We now enter into negotiations to call Russia's bluff or to justify further arming by proving that negotiations are futile. This guarantees failure and an intensification of mutual distrust. To break this vicious circle we would have to negotiate on the assumption that the Russians want peace as strongly as we do. Just as changing habitual neurotic behavior involves risk for a patient, so this change of attitude would also involve some risk, but it is not as great as the danger entailed by our present course. If we can look beyond our fears, there are signs that the risk may not be as great as we think. It is true that no country, including Russia and the United States, can be trusted when its vital interests are involved, but Russia has a vital interest in maintaining peace.

There is no doubt that Russia is bending every effort to make the entire world a Union of Soviet Socialist Republics, but she is achieving her goal so successfully by means short of war that she would seem to have much more to lose than to gain by trying to destroy us at great cost to herself. She knows much more of the horrors of war than we do. In the last war she lost an estimated 7 million soldiers and 20 million to 40 million civilians; we lost 300,000 soldiers and a negligible number of civilians. She is making immense strides in education, science, and industry; and despite our talk of catching up, her rate of gain in these areas far exceeds ours. She is being equally successful in winning the uncommitted nations by exporting technicians and doctors, increasing monetary aid, and, above all, by the example of a nation that has pulled itself up from an industrially backward country to a preeminent position in one generation.

Nor must it be assumed that the Russian and American ways of life will always be totally incompatible. Russia is still a ruthless dictatorship, but stirrings of freedom are discernible. Dr. Horsley Gantt, an American psychiatrist who speaks Russian fluently, was constantly accompanied by an interpreter on a visit to Russia some 20 years ago. On a recent trip he was allowed to go alone to visit his colleagues, and they were not afraid to receive him. News dispatches in the past year have contained many suggestions that political, industrial, legal, and agricultural policies are in flux, and transfer of power within Russia has become more peaceful and orderly. Although the treacherous execution of Nagy shows that Russia's policy toward the satellites is still one of terror, it may be significant that since the execution of Beria, no defeated Russian leader has been publicly killed.

If we and Russia can break away from the stereotype of each other as the enemy, we may be able to reach an agreement to stop testing nuclear weapons, with an arrangement for mutual inspection. Regardless of its effect on nuclear armaments, such an agreement, if it worked, would be of the utmost psychological importance. For it

would be the first, and therefore the most crucial, step toward the establishment of mutual confidence. Then it would become possible to move further along the road to the ultimate goal: a general system for maintaining world peace and disarmament.

## Warren Blocks Payroll Exhibit

EXTENSION OF REMARKS
OF
### HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following article from the Memphis Commercial Appeal, written by its alert Washington correspondent, Morris Cunningham:

WARREN BLOCKS PAYROLL EXHIBIT—REPORTER NOT ALLOWED TO EXAMINE RECORDS

WASHINGTON, March 23.—Chief Justice Earl Warren Monday refused to permit an examination of the Supreme Court payroll.

The Court's press officer, Banning E. Whittington, simultaneously denied that any relatives of the Justices or Court officers are among the Court's about 200 employees.

The request to examine the payroll, made by a reporter for the Commercial Appeal, was prompted by the current revelations of nepotism on Capitol Hill and the widespread protests against the refusal of some Senators to make the office payrolls public.

REASON IS GIVEN

The only reason for the Chief Justice's refusal to make the court's payroll public, as relayed by Mr. Whittington, was that it would be against policy.

"We haven't had any employees here who were related to any officer or any justice, at least since 1953, and I don't think we've had any in modern years," Mr. Whittington said.

A Federal law, in effect in varying forms since 1887 prohibits Federal judges or justices from employing relatives. Now section 458 of title 28 of the United States Code, states:

"No person shall be appointed to or employed in any office or duty in any court who is related by affinity or consanguinity within the degree of first cousin to any justice or judge of such court."

The Supreme Court's appropriation for this fiscal year which ends June 30, is $1,703,335.

SALARIES ARE INCLUDED

It includes $1,249,000 to pay the $35,500-a-year salary of the Chief Justice and the $35,000-a-year salaries of the eight associate justices, plus the salaries and wages of all other officers and employees.

A Senator's maximum allowance for employees is $70,980. It ranges as low as $49,980, depending upon the population of the State the Senator represents.

Senators hire their own employees. And the law gives Chief Justice Warren the say-so over the hiring of Supreme Court employees. The law says Supreme Court employees "may be employed and assigned by the Chief Justice."

The Supreme Court's current apropriation also includes $74,500 "for miscellaneous expenses to be expended as the Chief Justice may approve."

AUTO IS FINAL ITEM

Other items are $90,000 for printing expenses, and $284,000 for maintenance of the ornate Supreme Court Building.

A final item is $5,835 "for purchase, exchange, lease, driving, maintenance, and operation of an automobile for the Chief Justice."

A study of prior appropriation bills shows this $5,835 item first appeared in the appropriation passed by Congress July 7, 1955, the year after Mr. Warren became Chief Justice.

Despite fluctuations in automobile prices the same amount has been appropriated, for the same purpose, every year since then.

Mr. Whittington said Chief Justice Warren's Cadillac is traded for a new one every year, but he was unable to explain why exactly the same amount of money is required every year.

## Threat of Floods, Drought as Seen in Chimneys

EXTENSION OF REMARKS
OF
### HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 20, 1959*

Mr. OLIVER. Mr. Speaker, the increased discharge of carbon dioxide into the atmosphere could result in the flooding of our major seaports in 50 years. This is just one of the many startling theories with which our country's oceanographic experts are now grappling.

Problems such as these have tremendous implications not only in scientific circles but as components of military strategy as well. Neglect of the field of oceanic research due to lack of appropriations could eventually doom our Nation to the status of a second-class power. In this connection, it is interesting to note that on March 24, Soviet oceanic scientists reported another scientific first when they announced recording the lowest oceanic depth ever achieved, 36,173 feet near the Mariana Islands. This dramatically points up further the American scientific lag in this vital field.

The failure of the United States to invest in a comprehensive national program of oceanic research recommended by the National Academy of Sciences Committee of Oceanography might well prove disastrous to our national development and defense posture.

The following article, one in a series of 13 which originally appeared in the New Bedford (Mass.) Standard-Times, vividly illustrates some of the possibilities we may face in the future.

THREAT OF FLOODS, DROUGHT IS SEEN IN CHIMNEYS

(By Everett S. Allen)

By the end of this century, the earth's mean temperature could rise 1° C., resulting in devastating floods and scorching aridity. This statement was published last May in the Yale Scientific magazine, and although highly controversial among oceanographers, it involves one of the most startling aspects of their present research.

The crux of this problem, as stated by Dr. Bruno Giletti and Dr. Wallace Broecker at Lamont Observatory, Columbia University, is this: "There is practical concern about the effect on the earth's climate of the increased amounts of carbon dioxide injected into the atmosphere by mankind's consumption of coal and oil.

TEMPERATURES RISING

"The warmer climate that might result from this process could raise such problems as coastal flooding due to rise in sea level and increased aridity in certain areas due to increased evaporation rates."

Obviously, the considerations here border on those concerned with using weather as a weapon, but in this instance, there is the suggestion that even in the peaceful pursuits of industry, man may be pressing toward some unfortunate atmospheric changes.

This trend may already be well underway. A report of the Special Committee on Oceanic Research last August noted, regarding the last 50 years, the average temperature over Eastern North America and northern Europe has markedly increased, while elsewhere prolonged droughts have destroyed the work and hopes of decades.

"Will this trend continue over the next 50 years, or will it be reversed? Because we do not have sufficient understanding of the processes that control climate, we are unable to make a forecast.

"OCEANS PLAY PART

"It is probable that the waters of the oceans play a major role in changing climates. For example, an excess of heat from the sun can be stored in the deep water and slowly released over many years to warm the air. Likewise, the amount of carbon dioxide in the air controls, at least to some extent, the average air temperature and the loss of heat from the earth.

"Any change in the atmospheric carbon dioxide, for example by the addition of that provided from fossil fuel (peat, coal) combustion, may be damped or modified by the absorption of carbon dioxide in the ocean waters."

With regard to abnormally high tides and coastal flooding, this aspect of the situation focuses attention upon the Greenland and Antarctic ice caps, which are estimated to be 5,000 to 6,000 feet thick. If they were completely melted by rising earth-atmosphere temperatures, the resultant water added to the oceans would result in a sea level rise of approximately 100 feet

New York City, which has a subway entrance only 8 feet above normal high water, and most of the world's other major seaports would be inundated.

VIEW IS CONTROVERSIAL

Certain earth scientists particularly interested in the carbon dioxide problem already have predicted this may occur within the next 100 years, although this belief is not generally held, and is viewed among oceanographers as highly controversial.

The basic reasoning behind this theory is as follows:

The temperature of the earth's atmosphere is governed in considerable measure by the amount of heat received and retained from the sun. Not all solar heat is retained, because some things on earth, such as rocks, reflect the sun's rays and bounce them back into outer space. This makes for a certain heat loss.

Carbon dioxide in the air surrounding the earth acts like one-way insulation as far as the sun's heat is concerned. It lets the heat come through to the earth, but it prevents much of this heat from bouncing back into outer space. The more carbon dioxide there is in the air, the more of this heat is trapped within the earth's atmosphere. If enough of it were trapped, the temperature of the earth's atmosphere would warm up, in time.

FIGURES UNCERTAIN

Some scientists studying the carbon dioxide situation suggest this is happening right now. They suggest the carbon dioxide content of the earth's atmosphere may have increased

from 1 to 10 percent since about 1900, due principally to increasing industrialization and the consequent increase in coal-burning. Even if it is only 1 or 2 percent, that is considered a great deal, for it would be sufficient to influence climate change.

Unfortunately, such figures are clouded because nobody knows how much carbon dioxide there was in the atmosphere before the world's chimneys started pouring it out in smoke. Marine scientists hope to dig some air out of an old glacier pocket; this obviously would predate world smokestacks and might provide some helpful statistics on what preindustrial atmosphere was like.

Of critical importance is this factor: The temperature of the earth's atmosphere does not have to change much to produce major results. During the earth's period of full-scale glaciation, perhaps 30,000 to 50,000 years ago, when glacier ice came at least as far south as what now is Chicago, the temperature of the earth's atmosphere was probably no more than 10°C. colder than it now is.

UP 2°

An increase of 4°C. probably would be sufficient to melt the polar ice caps.

By comparison, studies indicate the temperature of the Northern Hemisphere has warmed up generally about 2°C. in the last 50 years.

It has been suggested this rise in temperature may be due in part to the fact that the oceans are unable to absorb enough carbon dioxide to keep the air content of this gas from increasing. This could be because the oceans are not turning over rapidly enough—that is, bringing deep water back up to the surface and vice versa.

Ocean turnover depends considerably upon temperature differences. Deep water is warmed by the earth's core; if surface water becomes cooler, it sinks, replacing this slightly warmer water. Such a cycle would bring up the deeper water until it, too, had absorbed carbon dioxide, oxygen and other gases and sank again.

OCEAN CHANGE NOTED

A warming of the earth's atmosphere, which now appears to be occurring, would conceivably slow this process of turnover. The surface water eventually would absorb all the carbon dioxide it could, then, still not being replaced by other water, the sea's absorption of carbon dioxide would be reduced.

Since more carbon dioxide would remain in the air, therefore, the atmospheric temperature would tend to rise even more, slowing the absorption process still further.

The little research ship Crawford of the Woods Hole Oceanographic Institution recently reenacted a study made 30 years ago by the German vessel Meteor. Water samples were collected at great depths across the South Atlantic in 15° south latitude. It was found that the amount of oxygen dissolved in the water had decreased slightly, but uniformly, during the intervening years.

BIG QUESTIONS

It was thought this might mean a slowing of deep-water replacement which was a result of—or a prelude to—climate change.

The big questions which oceanographers seek to answer in this problem that may be of critical importance to the future welfare of mankind in the words of one report, are these:

1. How rapidly is the carbon dioxide content of the earth's atmosphere increasing?
2. How rapidly is the ocean absorbing carbon dioxide?
3. How many degrees of temperature rise will occur if the atmosphere doubles in carbon dioxide concentration, which it conceivably could do?

Some scientists do not think the theory of an appreciable rise in sea level within a century is well founded. They suggest a 5-degree Centigrade rise might melt the polar caps in 5,000 years. This is admittedly conjecture, however, because it is based in part on the length of time required to melt the caps at the end of the glacial period when, as far as man knows, carbon dioxide played no part in the process.

GLACIERS RETREAT

Most scientists, however, watching the earth glaciers retreat slowly but steadily in the face of warming atmosphere, agree the great ice sheets eventually will melt and raise the level of the seas.

To what degree mankind is hastening this process, and whether it will take 50 years or 5,000, they do not know, but they also agree this is something science ought to find out if it can.

Thus, as part of the International Geophysical Year, scientists, including American oceanographers, are attempting a carbon dioxide census, at sea and ashore, trying to find out how much of this gas there is in the earth's atmosphere at various points around the world. A similar check, perhaps 5 years from now, taken at the same points, would offer the first indication of the rate of increase and the degree of seriousness of the problem.

## Tax Ruling Discriminatory to Small Businesses

EXTENSION OF REMARKS
OF
### HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. PELLY. Mr. Speaker, I should like to call the attention of my colleagues in the House to legislation which I introduced on Tuesday last, March 24, 1959, H.R. 5982, to amend section 1371 of the Internal Revenue Code of 1954 to provide that a husband and wife shall be treated as one shareholder for purposes of determining whether a corporation is a small business corporation.

The occasion for initiating this legislation was brought about by reason of a ruling of the Commissioner of Internal Revenue on November 26, 1958, to the effect that, in a community-property State like my own State of Washington, a married stockholder must be counted double, once for the husband and once for the wife.

Mr. Speaker, you will recall, in an effort to provide sorely needed tax relief to small business corporations, in 1958 Congress enacted an amendment to the Internal Revenue Code providing that small business corporations with less than 11 stockholders can elect to have their income taxed to their individual stockholders, thus placing these stockholders in the same class with business partnerships for tax purposes. The November 1958 ruling of the Commissioner in effect denies this privilege to small business corporations within community-property States.

I believe there are some eight States in the Union, of which my own State is one, which fall under this discriminatory ruling, by reason of their community-property status. It is my opinion that this ruling is completely inconsistent with other portions of the Internal Revenue Code and does not reflect the intent of Congress, in the light of past legislation approved by this body. For the record I can cite at least two instances when the Commissioner of Internal Revenue attempted to treat residents of community-property States differently from residents of separate-property States. In this connection you will recall that formerly only the people residing in community-property States were permitted to take advantage of the tax-saving benefit of income splitting by a married couple making a joint tax return. Congress acted to strike down this discrimination, in favor of community-property States, to provide that married couples in all States of the Union filing a joint tax return may apply the tax-saving benefits of splitting all income between husband and wife. Also, Mr. Speaker, I refer to the matter of estate taxes. Here again Congress legislated to remove any differences in the manner with which the Internal Revenue Service treated survivors residing in community-property States as against survivors residing in separate-property States.

It would seem to me these two instances alone should provide sufficient precedent for the Commissioner of Internal Revenue to enable him to establish nondiscriminatory rulings in applying the 1958 amendment to the Internal Revenue Code. It is entirely within the administrative authority of the Commissioner to do so. However, in discussing the matter with the Secretary of the Treasury although he has agreed to review the Commissioner's ruling, unfortunately he has also indicated that he feels the new regulations are proper.

Consequently, it appears the only sure relief available to constitutents in the State of Washington and other community-property States is through legislative processes. Therefore, believing that the Commissioner's ruling is obviously contrary to the intent of Congress in enacting the 1958 amendment to the Code, and also contrary to the spirit of past congressional enactments, as suggested previously, as well as being inconsistent with other aspects of the Internal Revenue Code, I have introduced the legislation previously referred to—H.R. 5982—in order to eliminate discriminatory and unfair treatment of residents of community-property States. I sincerely believe that the Commissioner's ruling creates an inequity in the tax status of the people living in these States as compared to those living in the rest of the United States, and I certainly hope that my colleagues on the House Committee of Ways and Means will see fit to take early and positive action on this bill.

## Ohio Solons Welcome Hawaii

EXTENSION OF REMARKS
OF
### HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. MOELLER. Mr. Speaker, it gives me great pleasure indeed to include the

following resolution, adopted by the 103d general assembly of the great State of Ohio in a gesture of welcome to our new State, Hawaii:

RESOLUTION OF THE OHIO SENATE EXPRESSING THE PLEASURE OF THE 103D OHIO GENERAL ASSEMBLY ON THE RECENT ACTION BY CONGRESS TO ADMIT HAWAII TO STATEHOOD

"Whereas the members of the 103d General Assembly of the State of Ohio were overjoyed upon learning of the action taken by Congress to admit the Territory of Hawaii to statehood; and

"Whereas this enriched Territory with its charming residents has long deserved to be a State of the United States as evidenced by its sacrifices, contributions, and unflinching courage in war and peace toward the preservation of democracy; and

"Whereas the residents in Hawaii have devoted their talents, abilities, and their lives in an all-out effort to become a part of the greatest Nation in the history of mankind; and

"Whereas Congress has at last recognized that the Territory of Hawaii possesses the great democratic qualities of statehood which will enable this island paradise to become one of the great States in the Union: Therefore be it

"*Resolved*, That we, the members of the 103d general assembly adopt this resolution and cause a copy thereof to be spread upon the journal, thus expressing our gratitude and pleasure that Congress has seen fit to extend statehood to the Territory of Hawaii thus enabling it to become the 50th State of the United States; and be it further

"*Resolved*, That the clerk of the senate transmit duly authenticated copies of this resolution to the Speaker of the House, President pro tempore of the Senate, the Honorable WILLIAM F. QUINN, Governor of Hawaii, and to each Member of Congress from Ohio."

I, Joseph W. Bartunek, hereby certify that the above is a true and correct copy of Senate Concurrent Resolution 9 adopted by the Ohio Senate Monday, March 16, 1959, and by the Ohio House of Representatives Tuesday, March 17, 1959.

[SEAL] JOSEPH W. BARTUNEK,
*Clerk of the Senate.*

## Col. Farrant L. Turner

EXTENSION OF REMARKS
OF
## HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. BURNS of Hawaii. Mr. Speaker, a few days ago it was a great shock, and a distinct sorrow, for me to learn that Col. Farrant L. Turner had passed on from a heart attack—that the divine providence had taken him from us in the midst of our common endeavors in behalf of justice.

During the early 1940's I became strikingly aware of his deep concern for his fellow men, especially those unreasonably placed under suspicion. His innate strength and profound courage enabled him to do what he believed to be right despite seemingly insurmountable odds. The Old Man will always be remembered by his boys to whom he will remain an inspiration because of his courageous spirit as well as his gracious, understanding nature.

Colonel Turner lived in accordance with the highest ideals of American citizenship. It is especially significant that he lived to see the attainment of Hawaii statehood, a goal to which he was sincerely dedicated and to whose achievement he contributed so much. His many public activities in community and charitable organizations, such as his service as president of the Honolulu Chamber of Commerce, and as secretary of Hawaii, were distinguished by the extra effort he gave to everything he put his hand to.

Hawaii has, in its greatest hour, lost an outstanding and beloved citizen who gave freely of himself and his talents to his community that there might be a better life for all. He will be deeply missed, but his example of manhood and citizenship will continue, in the years to come, to be an inspiration to us all.

All Hawaii joins in expressing our profoundest sympathy and prayers to his bereaved widow, and to his son, who shared with him life's joys and sorrows.

Colonel Turner has gone to the reward the Almighty reserves for "good and faithful servants." He will grant to the Colonel's family comfort and strength in their hour of grief.

Mr. Speaker, Hawaii mourns the death of her son, Col. Farrant Turner. Nothing could express our grief more eloquently than the following beautiful, moving eulogy written by one of his boys:

[From the Honolulu Advertiser, Mar. 23, 1959]

A VET'S TRIBUTE TO THE OLD MAN

(By Ben H. Tamashiro)

On the northeast slopes of Punchbowl, where the trade winds first come rolling over the top to sweep across the grandeur of the Pacific National Memorial Cemetery, they buried the Old Man today. It was the kind of morning that Farrant Turner loved so well—the shine of the morning sun softened by the trade winds as they pushed the clouds across the brief perimeter of the Hawaiian landscape.

To compare.

It was a morning so different from that day in late September of 1943 when Farrant Turner led the 100th Infantry Battalion into its first day of battle near the little Italian town of Chiusano. And if it took a day of battle to prove his principle, Farrant Turner was also ready for the consequences.

The guiding principle in Farrant Turner's life was his love for the people of Hawaii. Wherever they came from, whatever they stood for, the people came first. But there is such a thing as loving too much and too well, and if the Old Man had a fault, it was this matter of giving of his love and not having enough left over for himself. Selfless devotion to the good and welfare of the community—to this end, Farrant Turner continued to serve.

And where or what is the proof of this man to whom we ascribe so much? Is it not a matter of a palace, or a thousand gold coins, or a title to a square piece of land? No, no—not for the Old Man.

The proof of the worth of this man was shown by the assemblage that stood on the slopes of Puowaina as the flag-draped casket was gently laid to rest upon the ground. Here was the backbone of the land—the people. From the common man and the average citizen on up through the strata of society—they were all there.

Here was a cross section of Hawaii, the Hawaii to whom the Old Man gave so much. Farrant Turner must have died a thousand deaths to prove to the world that the people of Hawaii should have a place in the sun along with all the rest. And here on this morning, alongside the Old Man's grave, stood the living symbol of the faith of Farrant Turner.

The man who gave so much to all of us has now come to rest and it is so befitting that he should be buried here on Puowaina—the Hill of Sacrifice—buried beside those others who also sacrificed their lives for the very principle that Farrant Turner so outstandingly lived and practiced through all his years.

## U.S. Department of Agriculture's Food Inspection Insures Delivery of Quality Milk and Other Farm Products to All Sections of the Country

EXTENSION OF REMARKS
OF
## HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. SCHWENGEL. Mr. Speaker, prescribing a cure for the ills of agriculture is a popular sport these days. One reason for the wide range of ideas is the great variety of farm products grown in this country which are produced under so many different conditions.

That is one reason it is heartening to see a farmer-owned and operated group, such as the Maryland and Virginia Milk Producers Association, work together as a solid unit. Cooperation is something agriculture needs to maintain its vital and free place in the American economy. I am troubled, however, to note the advertisements sponsored by the Maryland and Virginia farmers in the press and on the radio and television of the Washington area which are abusing the remainder of the Nation's farmers in an effort to preserve the status quo in the Washington milkshed.

Specifically, I am referring to the association's advertisements about "tired old milk" joggled thousands of miles, which has not been inspected "by your own inspectors." This gives the impression that milk not produced within the Washington milkshed area is unfit for consumption in this area. Fifty years ago this was probably true. Agricultural research has solved the problems of long range milk shipping. Milk from the Middle West or the South, which is produced to meet the Federal milk regulations, is as safe as that produced in Montgomery or Loudon Counties.

The argument of the milk cooperative might be carried a step farther to include many other perishable agricultural commodities. Are the people of the east coast to stop buying the quality beef and pork, eggs, poultry, fresh fruits, and vegetables shipped to them just because they have to be joggled over roads and rails to reach their dinner tables? It is equally silly to attack the U.S. Department of Agriculture's long years of experience in food inspection because these

checks are not made locally. I believe the most of our Nation's consumers are much more willing to leave this critical inspection service to the trained, professional personnel of USDA.

Every segment of American agriculture suffers when a group of farmers attacks the quality of farm products. Agricultural research has provided the knowledge to produce foods that are high in quality as well as bountiful in supply. Americans never have to worry about buying unsafe food when purchasing groceries in the neighborhood stores. This is not true of most of the rest of the world.

I am proud that the farm commodity groups in Iowa, such as the Iowa Beef Producers Association and the American Dairy Association of Iowa, have directed their efforts toward the production and marketing of commodity products, not just to furthering the local farm interests.

The old adage of "United we stand, divided we fall" certainly applies to agriculture today. We have but a short time to present a united front for agriculture if farmers are to get a suitable program to fit their needs. Otherwise we shall have a program forced upon the agriculture of Iowa—and Maryland and Virginia—that will not benefit any sector of agriculture.

## An Inspiring Letter From a Constituent

EXTENSION OF REMARKS
OF
### HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. BERRY. Mr. Speaker, the questionnaire which I distributed recently to my constituents has brought many interesting responses, and one of the most inspiring was that of a 74-year-old pioneer, Billie Shoun of Ottumwa, S. Dak. The independent, self-reliant spirit he displays could well be emulated by all of us.

I believe excerpts from his letter would be of value to my colleagues:

I believe as Lincoln did that right makes might and in that faith dare to do our duty. * * * We are not honest with ourselves and of course then can't do justice to our young people and what then can you expect but juvenile delinquency? We don't need anything more for schools until we have something to safeguard posterity and have higher ideals than we have now.

Regarding the national debt, if we can't pay any in the good times that we like to talk about, the last 20 years or more, when our dollar has been a robber, then when will we pay it? Our forefathers knew the dollar couldn't be trusted so they inscribed on it "In God We Trust." Where is our trust today? Is it in a fast depleting dollar and missiles? We can't pass the buck forever. The belt will have to be tightened.

When we have handed out billions that we didn't have to our own people and billions to foreign countries that we didn't have, and lots of people say we can't pay to strengthen our national defense, how can we tighten the belt on the paunchy guys here at home and still keep handing it out to foreign countries? I have never figured that friendship that one had to buy was worth much, but I do know that we need all the God-fearing, liberty-loving people that we can get boosting for justice for all mankind, and there is so much to be done at home.

Regarding unemployment compensation, what people need is hard work and lots of it. That is what builds morale.

I was born 74 years ago in the best part of the world's history and in the best part of the world and had wonderful opportunities as did all my buddies of that age. And you know that all that I can show for it that is worth talking about and that goes for all my generation is that we have put a mortgage on the kids for $280 billion and put them in bed with buddy Russia. If that won't make a man ashamed, what will?

We have followed the compromise road long enough and it only leads to destruction. If a man doesn't think more of the future welfare of his country than he does of his own personal affairs, he doesn't deserve to live.

## Result of Oakland County, Mich., Opinion Poll

EXTENSION OF REMARKS
OF
### HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. BROOMFIELD. Mr. Speaker, for those of us who are removed at some distance from our constituents by our responsibilities here in Washington, we are constantly faced with the problem of determining the needs and wants of the people of our districts. Except for letters, occasional visits, telephone calls, and telegrams from those back home, we quite often are cut off from effective communication with those we represent and who elected us to office.

To help correct this situation, I mailed out some 12,000 questionnaires to my constituents in Oakland County, Mich., earlier in this session. For the past few weeks, my office staff and myself have been deluged with replies in a much greater volume than we had anticipated.

It seems as if a great many of the people of Oakland County like this method of expressing their opinions on important national issues which are now facing Congress. And the results of this public opinion pool have paid large dividends to me in many ways. In the first place, I was able to contact a great many people who ordinarily do not get in touch with their Congressman. These people, in the main, have no axes to grind or projects to push. They are acutely aware of our Federal Government and what it is doing to their pocketbooks and and purchasing power. But in many instances, they kept these views to themselves.

Secondly, by carefully selecting the areas in which these questionnaires were mailed, I was able to eliminate one-party answers to the questions, and I believe that I was able to receive a very good sampling of the opinions of my constituents on a number of key matters.

Third, very few of those who returned the questionnaire stopped with straight "yes" or "no" answers. Most included their reasons for answering the questions as they did, or voiced their opinions on other subjects involving our Federal Government. These written replies ran into the thousands, and were of great interest and help to me. Problems were raised of which I was not aware, solutions were offered which were worthy of a great deal of consideration by all of us here in the House of Representatives, blank spots and shortcomings in our Nation's laws were uncovered.

For all these reasons, the answers to this questionnaire were of great help to me. Some definite conclusions can be drawn as to the views of my constituents on many of our pressing problems through this sampling of opinion. Some of these results were surprising to me, and I am quite certain they will be surprising to my colleagues.

For instance, more than 62 percent of those who replied favor an increase of 1½ cents in the gasoline tax if such action will mean more and better highways in our Nation. This expression is particularly important because my District is in the heart of the automobile manufacturing area, and a great many of the auto firms have voiced opposition to this proposed increase in the gasoline tax.

Some 81 percent favor an increase in the present limit on outside earnings from $1,200 to $3,000 for those receiving social security. I hope that the Members of the Ways and Means Committee will take note of this expression of public opinion on a bill, H.R. 2735, which I reintroduced this session of Congress.

Our farm subsidy program was viewed with special disfavor by 82 percent of those who replied. Many said they want the agriculture subsidy program eliminated completely, while others thought it should be drastically cut in the fact of our mounting surpluses and the tremendous cost to our taxpayers.

About 69 percent favored a freer flow of political leaders, students, farmers, and others between the United States and the Soviet Union.

Rather than increase our national debt, more than 62 percent said they would be willing to pay increased taxes if such action is necessary to provide adequate Federal services. This endorsement of a balanced Federal budget is outstanding, and should be observed closely by my colleagues. Coupled with the many comments on the need for further economy in our Federal Government, the fiscal principles as outlined by our President to Congress appear to have a great deal of backing in my home district.

My constituents favored the President's budget recommendations in such fields as housing, postal subsidies, aids to mineral industries, community facilities, and airports. But on three subjects, there appears to be some disagreement. Those who replied are almost evenly divided on the matters of Federal aid to school construction, aid to depressed

areas, and further payments into the highway building fund.

The comments enclosed with the questionnaires covered almost every phase of our Federal Government's operations. But the largest number of comments was on the need for further economies in Federal expenditures, a balanced budget, and an end to deficit spending. Some questioned our foreign-aid program, others were critical of our defense effort, either stating that we were spending too much money or not enough in providing an adequate defense force for our Nation.

At this point, it might be well to point out that the results of this questionnaire are not going to tie my hands here in the House of Representatives. If I feel that I have more knowledge of the subjects and a better understanding of the problems involved on particular issues, then I most certainly will vote my own convictions on these matters. However, the results of those or any other survey I make in the future will be considered very carefully, as I have found that my constituents have shown a very great awareness of the issues involved, and they have some very definite opinions on how our Nation's problems should be solved.

Following is a tabulation of the results of this survey:

The President's budget for the year beginning next July 1 calls for expenditures of 77 billion and an estimated income of 77.1 billion. Additional expenditures totaling several billions are being proposed by some Members of Congress. How would you vote on the following?

| Questions | | Yes | No | No comment |
|---|---|---|---|---|
| Aids to housing | $1,000,000,000 | 24.2 | 65.8 | 10.0 |
| Added payments under soil bank | 700,000,000 | 4.3 | 67.1 | 28.6 |
| Increased payment to civil service retirement fund | 600,000,000 | 25.4 | 70.1 | 4.5 |
| Aid for school construction | 480,000,000 | 46.0 | 49.7 | 4.3 |
| Postal subsidy (over amount proposed in 1960 budget) | 350,000,000 | 12.7 | 80.9 | 6.4 |
| Payments to highway building fund | 250,000,000 | 46.0 | 48.6 | 5.4 |
| Aid to minerals industry | 160,000,000 | 9.3 | 82.4 | 8.3 |
| Financing community facilities | 150,000,000 | 12.9 | 80.0 | 7.1 |
| Grants to airports | 110,000,000 | 26.1 | 66.9 | 7.0 |
| Aid to depressed areas | 100,000,000 | 46.7 | 46.7 | 6.6 |
| If you have answered "Yes" to any of the above, would you recommend paying for the projects by— | | | | |
| An increase in taxes? | | 64.0 | 36.0 | ------ |
| Or, an addition to the Federal debt? | | 23.0 | 77.0 | ------ |
| Do you favor increasing the limit on outside earnings for those receiving social security benefits from the present $1,200 to $3,000 per year? | | 81.2 | 14.5 | 3.3 |
| Do you favor a freer flow of political leaders, students, farmers, businessmen, etc., between the United States and the U.S.S.R.? | | 69.0 | 24.9 | 6.1 |
| Do you favor a trial test for pay TV? | | 33.7 | 58.8 | 5.5 |
| Do you favor increasing the Federal gas tax from 3 to 4½ cents per gallon to maintain pay as you go in building Federal-aid highways? | | 62.6 | 32.0 | 5.4 |
| Should extra funds be provided for veterans' hospital facilities? | | 27.1 | 64.1 | 8.8 |
| The prices of 12 farm commodities are supported by Federal law at prescribed minimum levels. In general, do you approve of the support program? | | 13.3 | 82.2 | 4.5 |
| Would you favor a national fair trade law permitting establishment of a minimum price on trademark or brand-named merchandise? | | 22.2 | 72.2 | 5.6 |
| Do you favor Federal legislation raising the minimum wage from the current $1 an hour? | | 40.0 | 57.2 | 2.8 |

## Tribute to a Statemaker

EXTENSION OF REMARKS
OF
## HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 26, 1959*

Mr. BURNS of Hawaii. Mr. Speaker, legislation to admit Hawaii as a State of the Union has become law as a result of the efforts of many dedicated people from all walks of life. The final decision was made by the two Houses of the 86th Congress.

The genial, indefatigable gentleman from New York, the Honorable LEO W. O'BRIEN, is Mr. Statehood of this greatest deliberative body. In the other body of this Congress, Mr. Statehood is the energetic and knowledgeable junior Senator from Washington, the Honorable HENRY MARTIN JACKSON.

The New York Times recently paid tribute to the statemakers of each House. I am pleased to include herewith the fine article which paid justly due honor to Mr. Statehood of the other body of the Congress:

[From the New York Times, Mar. 12, 1959]

MEN IN THE NEWS

WASHINGTON, March 12.—Senator HENRY MARTIN JACKSON is a man whose interests are as varied as his own Pacific Northwest.

His colleagues regard him as a persistent thinker if not always a profound one, and they know that he brings to his work constant diligence, determination, and drive. This persistence has been applied to the problems of getting Hawaii into the Union—a project he has been in charge of, as chairman of an Interior Subcommittee, for the last several years.

It has also brought Senator JACKSON prominence in the missile field as one of the most consistent critics of the administration. In fact, this amiable, 46-year-old Democratic bachelor from the State of Washington was one of the men directly responsible for President Eisenhower's first full-scale briefing on the U.S. missile program.

He has been known to wonder lately whether this did any good, but at least in mid-1955 he and Senator CLINTON P. ANDERSON, Democrat of New Mexico, who is chairman of the Joint Atomic Energy Committee, did send the President a memorandum suggesting that he be fully informed of missile progress.

The President accepted the suggestion.

For a man who feels so deep an urgency about his country's defenses, "SCOOP" JACKSON—the nickname comes from paper-carrying days as a boy in his native Everett, Wash.—is outwardly among the calmest and most serene of men.

There are times when his voice rises forcefully and he displays a carefully staged indignation, but, for the most part, he seems to have inherited the easygoing, good nature of his Norwegian parents.

He came to Washington in 1941 as a Member of the House of Representatives.

In 1952, after a lively campaign, he unseated a Republican Senator, Harry P. Cain, by a vote of 595,673 to 460,884.

The following year he received much publicity when he and two Democratic colleagues resigned from the Permanent Investigation Subcommittee in protest against the actions of the then chairman, the late Senator Joseph R. McCarthy, Republican of Wisconsin.

Born May 31, 1912, the future Senator was educated in Everett public schools. At Everett High School he was a member of the debating team and manager of the basketball team. He entered Stanford University but soon transferred to the University of Washington in Seattle. He worked his way through college and the law school, receiving his bachelor of laws degree in 1935.

## The Christian Press of Colombia Describes Fidel Castro as a Dictator

EXTENSION OF REMARKS
OF
## HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. FLYNN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a United Press International report about two editorials in the official organ of the cardinal, archbishops, and bishops of the beloved Republic of Colombia. The report is particularly meaningful because this weekly was moremost in upholding freedom and decency against the military dictatorship of Gen. Gustavo Rojas Pinilla of Colombia. Like every religious newspaper, this publication supports the cause of representative government and genuine socioeconomic progress. The United Press International dispatch follows:

BOGOTA, March 15, 1959.—El Catolicismo, official organ of the Colombian hierarchy, publishes in this week's edition two editorials. One criticizes Fidel Castro, who is described as the new dictator in Cuba and another piece which condemns Dr. Manuel Urrutia, provisional President of Cuba.

The Catholic weekly, directed by two priests and celebrated for its opposition to the ex-dictator Gustavo Rojas Pinilla, now declares that "Mr. Fidel Castro, lucky fighter, inexpert politician, lacking in intellectual maturity, a demagog and exhibitionist, has disappointed all human beings in the world who uphold democracy and the juridical norms that should guide its exercise."

The editorial continues:

Converted into a hero by force of circumstances, Castro was able to conquer and to overthrow the dictatorship of Fulgencio Batista which was a disgrace for his country.

But he has not known how to be either just or democratic. His capacity for combat brought him a victory which the world greeted with enthusiasm. Thereupon, Castro demonstrated that he is notoriously inferior to the task which it was hoped he would fulfill.

Then the weekly mentions the trial of the Cuban aviators and the intervention of Fidel Castro forcing a revocation of the verdict of innocent and adds:

Such action is nothing more or less than the exaltation of brute force, erection of the will of the tyrant into law. This does not mean passing judgment upon the men accused in the sense that they are claimed to be innocent or guilty. The fact is that they were acquitted by the very companions of the bearded hero by so-called revolutionary justice. It was the same type of revolutionary justice which had been responsible for the summary death sentences, imposed before television cameras and in the stadium, trials and decisions which the photogenic soldier of liberty had claimed were worthy of respect when, throughout America, men believed the contrary.

The review concludes its first editorial in the following terms:

It grieves us to note this new obstacle for our sister Republic, Cuba, on the difficult road it has to traverse toward democracy. We unite our voice of protest and of reprobation to the voices of all Christian leaders, of all those jurists, and all true democrats who have spoken out against this act which makes Fidel Castro the new Cuban despot.

In another commentary, the same weekly recalls that, during the visit of Miss Universe, Senorita Luz Marina, in Habana, President Manuel Urrutia received her and said:

Thirty years in the judiciary compel me to respect the decision that made Senorita Zuluaga Miss Universe.

The editors added the following comment:

It is a great pity that so many years on the bench have merely served to make Dr. Urrutia show reverence for a decision proferred in a beauty contest and have been totally insufficient to make him accept another decision much more important and distinctly juridical; namely, the decision reached by a court of his own fatherland, the acquittal of the Cuban aviators accused of grave crimes. Thirty years of judicial experience have yielded to the demand for a new trial and have been climaxed by the recent condemnation.

## Clear Nation's Water Supply of Pollution

EXTENSION OF REMARKS
OF
### HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a statement I submitted to the House Committee on Public Works in support of H.R. 246, to amend the Water Pollution Act:

STATEMENT OF REPRESENTATIVE MELVIN PRICE BEFORE THE HOUSE COMMITTEE ON PUBLIC WORKS IN SUPPORT OF H.R. 246 TO AMEND THE WATER POLLUTION ACT

Mr. Chairman, I appreciate your courtesy in allowing time for this statement as the committee renews its study of the vital need for expanding the role the Federal Government plays in clearing the Nation's water supply of pollution, and the bill I introduced on the subject, H.R. 246.

This committee and the Congress have demonstrated their belief that the Federal Government has an absolute need to support the efforts of local communities in the construction of municipal waste treatment plants.

The Congress last year exercised its right as a coordinate and equal branch of the Government to decline agreement with an Executive recommendation that the Federal antipollution program be halted. With all respect for the authority of the Executive to make such proposals, the Congress used its own authority and discretion in the legislative field to express its conviction that the recommendation was shortsighted.

We now have an additional year of experience, Mr. Chairman, to inform us of the need for continued and additional Federal aid to our hard-pressed municipalities in the water-pollution field.

We have abundant evidence that water pollution is a national problem—that it affects all our major rivers, bays, and streams. We know that water poisoned high on a river system adversely affects the health and welfare of communities perhaps hundreds of miles downstream.

Our rivers have been turned by carelessness and neglect into open cesspools. We are debarred from the full exploitation of our water resources by pollution that prevents the reuse of water in otherwise perfectly feasible and economical ways.

We observed that in the first years of the Federal antipollution program, more than 90 percent of the communities with projects that were approved averaged only slightly more than 9,000 in population.

These communities do not have the resources to build expensive waste treatment plants from their tax funds alone. Yet the record shows that with Federal encouragement and reasonable aid, they are anxious to move ahead. For every Federal dollar obligated, at least a total of $4 was planned by the separate communities. The smaller municipalities are not unwilling to do their part in the gigantic task of making our rivers once again the pure streams that we inherited. Wise and discriminating Federal aid, with full participation by the States to make sure that projects are useful, is an enormous stimulus to action.

In my bill, I express the conviction that the time has come to increase the total authorized expenditure of Federal funds, to raise the maximum grant for single projects from $250,000 to $500,000, and to ease the existing single-grant restriction that makes it impractical for two or several communities to coordinate plans and to cooperate in their projects.

The chairman of your Subcomimttee on Rivers and Harbors, the Honorable JOHN BLATNIK of Minnesota, in the bill on which Congress acted 3 years ago proposed that the total Federal authorization be placed at $1 billion. Only $500 million was authorized, and time has proved that a Federal expenditure of $1 billion is clearly needed.

Hundreds of communities now have projects underway, and we know from the applications that much wider and more vigorous action is essential. The municipalities that want to live up to their responsibilities for restoring and preserving a pure water supply deserve the encouragement of a broadened Federal commitment.

We know, also, that smaller communities would willingly undertake significant projects if the single-grant restriction were removed.

In numerous areas there are two, three or more communities contiguously located that cannot meet their waste treatment needs on an artificially separated basis. We ought to make it possible for them to cooperate in planning projects, in working together, and in actually proceeding with coordinated construction in which each community can use most productively its grant of Federal assistance.

H.R. 246 also proposes that if any State allotted sums for projects does not actually obligate funds for any project by approving it, the sums shall then be reallotted by the Surgeon General to the States which have approved projects otherwise lacking aid.

The provision would not deprive any State of Federal assistance for projects that in its own authority it approves or certifies as entitled to priority. It simply proposes that if a State withholds approval or certification after a Federal allotment is made, the sum thus not actually obligated shall go to other States that have approved projects but which have exhausted their normal share of the total annual amount available.

The bill, H.R. 246, contains one other section that seems to me of considerable importance. It would add to the original act a Davis-Bacon clause providing for the payment of prevailing wages on projects financed through the program.

This committee is familiar, of course, with the fact that in the highway program the Congress adopted the Davis-Bacon provision for the payment of prevailing wages. The Davis-Bacon Act, laying the foundation of this, was adopted originally in 1931 and was signed into law by President Hoover. It expressed the philosophy that Federal grants should not be used to finance projects wherein the wage scales would be so low as to exercise a depressing effect on the wages paid elsewhere in a locality on similar construction projects.

This philosophy seems to me wholly reasonable and proved in its usefulness. It encourages the stabilization of the construction industry and it safeguards against the danger that Federal funds might be spent in ways that produce socially undesirable results. It is a provision that is willingly met by responsible construction firms and it limits the possibility that other firms would gain a competitive advantage in bidding on projects stimulated and partially financed with Federal money by calculating their bids on wages below the normal amount actually paid as the going wage on similar projects in each locality.

## National Conditions Affecting Inflation

EXTENSION OF REMARKS
OF
### HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the RECORD, I include comments made by Mr. Paul Stark, of Louisiana, Mo., in a conference on national conditions affecting inflation.

Mr. Stark said:

You cannot return to the old dollar. The best we can hope for is to make the present dollar sound. Hold the line there. Return must include not only a balanced current budget but also an amortization fund to retire some of the bonds each year.

Nothing would be so helpful in refunding the next issue, long- or short-time bonds, so as to be able to retire a part of them as they come due. Until we start periodic amortization no palliatives will bring confidence that the dollar's value will be kept at its present purchasing power. Once stabilized, our role in international affairs will have a different significance. The world will know that our assurances are backed up not only by men

and materials, but by a sound currency system as well.

No additional money should be voted until and unless the budget has been balanced with an amortization fund in operation. Every new assistance, no matter for whom or why, should be accompanied by a tax to pay interest and amortization.

The subdivisions of the Government, the States, and cities, are in better position to raise funds than the Federal Government. And that includes the District of Columbia. Its citizens can take care of themselves. They have settled there out of choice. The Government has not sent them there. And they can repatriate themselves any time they wish.

There are those who advance the theory that by greater spending you will increase the turnover and thereby alleviate unemployment. Any intelligent examination will show this argument to be wholly falacious. There is a point of diminishing return in the productive capacity of practically everything in the country, whether it be steel, copper, automobiles, or agricultural products. The difficulty is in distribution and consumption. There are not enough people in the United States to buy all the steel and automobiles produced in this country in addition to those imported—at lower prices. The rise in costs has priced many products out of the market and has thereby brought about increased unemployment.

Every proposal to appropriate, which would result in deficit spending, should be examined in it relation to the economy as a whole and its relationship to other nations.

There are many things which would pleasantly increase our standard of living but the first question should be whether we can have them now or should wait until we have met current expenses and retired the annual quota of national indebtedness.

We must take into consideration the rights of those hard-working and thrifty people who for years have put by their savings to take care of old age and dependents. And the rights of those retiring on annuities and pensions.

Mr. Speaker, on a more dramatic occasion a great statesman offered the alternative of "blood, toil, tears, and sweat." And in much the same vein President Eisenhower said last week:

We need to practice the self-discipline that freedom demands. We must concentrate our resources on those things we need most, minimizing those programs that make less decisive contributions to our Nation.

## Too Few Facts

EXTENSION OF REMARKS
OF
### HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. RODINO. Mr. Speaker, we read every day of the needless loss of lives on our American highways and streets as a result of traffic accidents. Yet somehow we never grasp the full magnitude of the number of deaths caused this way.

Although many programs have been launched in an effort to cut down this terrible death toll—little progress seems to have been made. And, yet, no one will deny that much more remains to be done and should be done quickly.

I believe that the suggestion made by an official of the American Automobile Association, as expressed in the following editorial which appeared in the Newark Star Ledger on Saturday, March 21, is not only timely but worthy of sincere exploration and consideration:

TOO FEW FACTS

Despite the thousands of lives lost every year on the highways, too little is being done to pin down the causes of accidents.

A sound traffic safety program must be based on the facts. Too often, however, emotionalism is the guiding factor, simply because the facts are inadequate.

To remedy this, a top official of the American Automobile Association has suggested that the Federal Government undertake a program of research, cooperation with the States and coordinating experts' findings.

A thoroughgoing research program probably is needed as much as anything else before there can be an adequate highway safety program. It would make sense to put such a research program under the direction of the Federal Government with the view toward eventually forming a national safety program on the basis of the facts developed by the researchers.

## Bill To Correct Discrimination in Civil Service Regulations

EXTENSION OF REMARKS
OF
### HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. PELLY. Mr. Speaker, yesterday my colleague from the State of Washington [Mr. TOLLEFSON] and I introduced companion legislation designed to correct what we feel is a weakness in the Civil Service Act which permits and agency to force the resignation of a Federal employee very possibly on personal or punitive grounds.

These bills, H.R. 6071 and H.R. 6062, were initiated by reason of the recent decision of the Civil Service Appeals Board denying the petition of one Joe King.

Very briefly, Mr. King appealed the right of his agency to force his resignation by eliminating his job in the Puget Sound Naval Shipyard and refusing him the opportunity of accepting similar employment in the same agency without competitive examination. Therefore, his only alternative was to accept a job at one grade lower by bumping a nonveteran civil service employee with some 20 years seniority. This, Mr. King, as a matter of principle, refused to do.

The King case received national publicity. Joseph Young, writing in the Washington (D.C.) Evening Star, devoted his entire column to a critical report of the Board's action the day the decision was handed down. However, while both Congressman TOLLEFSON and I feel that Joe King has been discriminated against by reason of a loophole in the civil service regulations, the primary purpose of our legislation is to change these regulations by legislative action to prevent any similar injustice in the future.

Aside from his personal populatrity with his associates and subordinates in his own agency, one of the principal reasons Mr. King's case received national attention lies in the fact that thousands of Federal employees are visualizing themselves in the same situation, and with the precedent now established by the denial of his appeal every Federal employee in a similar situation is subject to the same discriminatory treatment.

Therefore, Mr. Speaker, in behalf of my colleague and myself, I urge immediate action on the part of the Post Office and Civil Service Committee on this urgent legislation to provide justice and to bolster employee morale.

## A Bill To Increase the Minimum Wage

EXTENSION OF REMARKS
OF
### HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. HOLTZMAN. Mr. Speaker, I am today introducing in the House of Representatives a bill which will provide for an increase in the minimum wage to $1.25 per hour, and extend the coverage of the Fair Labor Standards Act. I had introduced similar legislation in previous Congresses, but favorable consideration had not been given the same by the committee.

You will recall, of course, that the Congress in 1955 during the 84th Congress passed legislation amending the Fair Labor Standards Act bringing the minimum wage from 75 cents per hour to $1 per hour, effective March 1, 1956, but no extension of the coverage of the act was enacted at that time. President Eisenhower, in his state of the Union speech on January 6, 1955, had recommended an increase in the minimum wage to 90 cents, and extension of the coverage to bring protection to many others, at that time excluded. A few days later, Secretary of Labor James P. Mitchell, at a press conference, indicated that the administration planned to include retail and service workers under the coverage. However, when the administration bill was introduced, it did not include any provisions for extension of the coverage, although it did advocate the increase to 90 cents per hour.

The President's Economic Report transmitted to the Congress earlier this year again calls for extension and improvement in the coverage of the minimum wage. In addition, the recent conference of the AFL–CIO executive council held in Puerto Rico renewed its recommendations to the Congress to increase the present $1 per hour rate to $1.25, and that the coverage be extended to approximately 8 million workers now exempt, including certain employees of

the retail industries. At the present time, with the lingering unemployment problem, and in view of the continuing rise of living costs, such recommendations are certainly not out of line. There is no question about the fact that the minimum wage, even with the increase of several years ago, has failed to keep up with the cost of living. The unemployment figures for last year were tragic, and despite all the talk about expanding economy and healthy and vigorous recovery, the cold fact is that unemployment has increased steadily each month since last November. In February of this year it stood at 6.4 percent of the labor force.

The $1.25 hourly minimum and the extension of the coverage, called for in my bill, would put a more realistic floor beneath current wage levels, and would prevent the exploitation of many substandard, seasonal and low-wage workers. In addition, more purchasing power would be made available to our workers, thus stimulating our national economy, and bettering our standard of living.

I certainly hope that the Committee on Education and Labor, and the House itself will be in a position to consider this legislation favorably this year.

## Economic Embargo Only Answer to Japan

EXTENSION OF REMARKS
OF
### HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 23, 1959*

Mr. PELLY. Mr. Speaker, the following statement from the Northwest Trawlers Association, Inc., has been sent to the Washington State congressional delegation.

Legislation is needed to get the Japanese to join us in conservation of an important fishery resource:

BRISTOL BAY CLOSURE

*To Washington Congressional Delegation:*

Though the members of this association are concerned primarily in the producing of trawl fish, we certainly wish to register our sincere protest over the closure of Bristol Bay as announced by the U.S. Fish and Wildlife Service this week. Many of the members of this association rely on salmon as a means of income during a portion of the fishing year and the closure of Bristol Bay to all fishing during 1959 will have a severe effect on the economic conditions within our fishery.

In protesting, it is not our purpose to be critical of the position of Secretary of Interior Seaton, for in our opinion, the move was a necessary one. Our protest is directed at the U.S. State Department for their failure to conclude negotiations with the Japanese Government to remove the Japanese fishermen from the high seas salmon fishery. The fishery industry has long warned that the closure of the bay was imminent if the Japanese were allowed to continue their fishery on Bristol Bay stocks. As the situation exists today, even if the Japanese were willing to withdraw from the high seas area, damages in previous years to immature stocks will mean a long road of critical conservation to bring back the once great Bristol Bay runs to their rightful place in the U.S. fishery economy.

We urge immediate hearings on the various bills now in the Congress which would ban the importation of salmon taken by Japanese on the high seas. With the lifting of the importation ban on salmon by the British, the effect of such legislation may be minimized. It is our further suggestion, therefore, that the ban be extended to all fishery products from Japan coming into the United States.

In our opinion, only one lever, that of economics, will be effective in the salmon industry's battle for survival. Negotiations at the level of the North Pacific Treaty Commission have ben stalemated. The efforts of the U.S. State Department to reach bilateral agreement with the Japanese has also ended to date, in an impasse. Only by economic embargo can we achieve our goal of maintaining the important Bristol Bay resource.

## A New Decade in Transportation

EXTENSION OF REMARKS
OF
### HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. HARRIS. Mr. Speaker, the Washington chapter of the National Defense Transportation Association has extended to me an invitation to be guest speaker at its annual dinner tonight.

Under leave to extend my remarks in the RECORD, I include the speech I have prepared for delivery at the dinner:

I am humbly and deeply grateful to your chapter for the great honor which you have extended to me tonight for this recognition by distinguished members in the Government and the transportation industry I shall ever cherish—and I thank you very much.

When your Mr. Mappes came to my office and asked me to be with you for this occasion, I must confess I was rather reluctant. As a matter of fact, I was at that time deeply involved with committee work and important legislative proposals, and perhaps did not manifest a great deal of enthusiasm. Of course, I had not idea that I was to be signally honored as you are doing.

I suppose, then, that I could not be considered as a volunteer, under the circumstances. Certainly not as it was with the young man who went to the county courthouse to obtain his marriage license and the clerk asked where was the bride-elect. The young man said: "Actually there was no election—the old gal just volunteered."

I have enjoyed the association with the transportation industry, and the work in connection with legislative problems that vitally affect the future welfare of the American people. Transportation and communications are two subjects very close to my heart. I suppose it is because I feel so deeply about the importance of them in every facet of our lives.

I only hope that my activity in connection with the problems of transportation has been such that this recognition—the honor you confer on me tonight—is deserving. I do feel that any such tribute which I receive must be shared in by the Committee on Interstate and Foreign Commerce. We work as a team and I feel it is the committee that deserves the distinguished service award of this chapter of the National Defense Transportation Association.

I welcome this opportunity to express some views on the transportation outlook of the next decade.

Much of what I have to say tonight has been said before by others more expert than I. The forward look at a new decade will also be a subject for other speakers, but perhaps my views, based on my experience as a public servant and one who has been concerned with the legislative needs of the great American transportation system, so vigorous in its competitive growth and so vital to every single American, will add a few brush strokes to this large and many-faceted picture.

First, of course, I find myself speaking on this occasion to experts in every field of transportation. While the situation provides a most sympathetic audience, it is also fraught with the perils of a layman discoursing on a technical subject to those who really know the subject.—Here, perhaps, is a view of a citizen user of transportation and from one who has listened with keen interest to the views of each form of transportation in quest of fair and equitable legislation.

In retrospect, we can see that the period following Columbus' discovery of America was charged with an excitement stemming in large part from the adventures on strange waters and unknown lands. This excitement, and these discoveries, entered into all forms of life and influenced every aspect of thinking. There felowed what we know as the Age of the Renaissance—a revival of poetry, literature, and the arts, a revolution in science, and a change in man's concepts of man, of his religion, and of his philosophy.

It goes without saying that today we stand on the threshold of another great Renaissance. Through the developments of science and the discoveries of the scientists during this International Geophysical Year, we have greatly extended the physical and psychological frontiers on earth. More than that, we now believe it is only a matter of time when man is no longer earthbound, that man's physical frontiers now are somewhere far out in space.

The excitement that goes with these new horizons, both on this earth and beyond it, is boundless. It is a terrific challenge to all engaged in the various fields of science. But that is only part of it. Veritably we stand today, as did the people of the age of Columbus, where a new Renaissance can be ours. It can be ours if we rise to the challenge that these new horizons present to our thinking in all phases of knowledge, to the need for readjusting, for revitalizing, for reappraising all of our past concepts, whether in the arts, philosophy, politics, geography, or in transportation and commerce.

After some years of consideration on the part of leaders in all fields of transportation, the Congress in 1940 passed a Transportation Act which included a statement of transportation policy. At the time it seemed the last word in an expression of policy concerning the Nation's approach to our great national transportation system and to each mode of transportation. It was a good statement. I subscribed to it. I presume that you did, too.

But tonight I should like to suggest that the times well may call for a reassessment of that policy. Does it fully express what our policy should be under the fast moving impact of the space age? What must be our policy to provide the transportation system so essential to our economy, to our defense, to the shipping and traveling needs of the public?

"The old has passed away, behold, and the new has come."

Basically, I think we can all agree that no modern nation can grow or prosper without an efficient and rapid system of transport. Each form of transportation has contributed its share in the development of our Nation. Each means of transport has had its day of support from Government and has repaid the American people manifold for such support. No one medium

of transportation could supply all of the needs of our complex civilization or meet our defense needs today. The 1950's have seen an adjustment in the relative volume position of the various forms of transport but each has shown a substantial growth and ability to meet the Nation's needs. We see throughout the world many countries blessed with more raw materials, equally suitable climate for high standards of living and yet, due to inadequate transport and communications, unable to compete in this fast-moving world. We have also seen the phenomenon of Great Britain where a great transport and communications concept for hundreds of years provided growth and prosperity to a nation seriously short of raw materials and limited in geography.

Equally it is apparent that rapid, efficient systems of transport and communications is a military necessity for any nation aspiring to high standing in the world community. The Armed Forces today of our Nation are completely dependent for the production and movement of necessary force for our national welfare and defense upon the adequacy and continuous improvement of our great national transportation network.

We cannot, as a Nation, for reasons of the national economy or national defense permit our transportation system to stand still or deteriorate. The Congress, representing the people, must exercise a minimum of legislative controls and a maximum of legislative encouragement to permit the continuous and healthy growth of our transportation network as the base of our prosperity and military strength.

We Americans are being challenged today by a different concept of the individual human being. Our transport system has been developed by free enterprise to the highest level of efficiency the world has ever seen. Our shipping and buying public enjoys many pleasures and luxuries impossible without the low-cost, competitive, rapid transport available today to move anything from hairpins to giant turbines quickly and at a cost which the shipper can afford to pay. But the requirements increase—the need is great for our economy and our military strength to keep pace with the Soviet challenge for world domination. No nation or individual can maintain a status quo growth and improvement is the only antithesis or deterioration. With our utter dependency on transportation for the welfare of our Nation, the challenge to our way of life on every front can only translate itself into a challenge to the transportation industry.

Many advances have been made in our transport system in the 1950's. In every phase of transportation great strides can be noted. In fact, I believe it can be said the 1950's saw the growth to maturity and relatively equal acceptance of the various segments of the American transportation system. We have seen in the 1950's the rapid replacement of less efficient steam locomotives by diesel power, representing a tremendous advance in the speed of service and the reductions of cost to our Nation's railroads. Had it not been for this and many other improvements, the railroads would have had hard sledding in meeting the demands and needs of the military and the public.

We have seen rapid strides in our motor carrier transportation system in the 1950's. More efficient units with lower costs and ease of handling has enabled the motor carrier industry to expand its services to the public and the national defense, and to meet the tremendous demand for high-speed door-to-door delivery. A vast improvement in our highway system was begun in the 1950's to be carried to conclusion in the decade ahead.

All of us have been excited by the phenomenal growth of air transport in the 1950's with complete acceptance, domestic and worldwide, for the movement of passengers and light freight, and a gradually opening phase of the movement of heavier types of freight needed by industry and peculiarly adapted to movement by air. The American air system is the world standard of competency.

The rapid expansion of our Nation's waterways and coastal shipping has astonished those of us who watch from the sidelines. Low costs and roll- roll-off ships and barges offer a real challenge in ideas to other forms of transport and a real service to the public.

I did not by any means intend to leave until last the many advances and improvements in overseas shipping. We are even now in the throes of a vast modernization of the movements of people and things by fast modern vessels geared to the rapid movement of our age. Nor do I fail to recognize the contribution of the Nation's vast pipeline network, greatly expanded and improved by new methods of automation in the 1950's, opening up entirely new industries in the field of chemicals produced from natural gas and providing new outlets for our petroleum products and new sources of fuel to industries throughout our Nation.

The 1950's have been a truly great chapter in the history of American transportation. No one knows this better than you gentlemen in the National Defense Transportation Association. You are both those who have dreamed and developed these modern miracles of technological progress and simultaneously put these innovations to work in the interest of the welfare and security of our people.

Much more must be done to improve this seemingly unimprovable system in the decade ahead. The public will demand the further reductions of relative cost to combat inflation and to continue to provide the base for our industrial growth and standards of living. (Even more, the challenge from abroad now shaping up so clearly not only in military and political areas but now more obviously in economic competition in the underdeveloped areas and for the markets of the world.) Wars are no longer fought primarily on the field of battle, as we all know. To lose the battle on any front, economic, political, or military, will be to lose the battle on all fronts.

Many may ask how the motor carrier and railroad industries have anything to do with meeting a Communist economic threat in South America, Africa, or Asia. For those who may ask the question, I believe the answer will be so evident as to be apparent even as the question is asked. Good transportation will be a part of every product, military or civil, which becomes a tool to defend our system of freedom against any threat, from any source. Inadequate transportation could contribute to the loss of the battle on any front.

In an effort to stimulate the thinking of you experts in transportation, but without the temerity to suggest how to accomplish the needed miracles of the 1960's, let me touch on only two major items which I feel most important to our Nation in the decade ahead.

Firstly, I feel this is the decade when we need to eliminate unnecessary expense in each form of transport. In other words, this must be a decade of cost consciousness. When growth has been as fast as in the 1950's—when new ideas and new developments come with great rapidity—wasteful procedures, excess personnel and sheer fat accrue. These contribute to passing on cost to the public and in turn becomes a part of the cost of every item consumed by the American public. In turn, each unnecessary rise in transportation cost makes more difficult our ability to compete in the world market. So, I would appeal to our modern miracle men of transportation to make the 1960's the decade of cost consciousness—a battening down of the hatches—keeping pace with the continuous flow of new ideas and new technological progress which I am sure will be forthcoming under our free enterprise competitive system.

This thought of increased efficiencies and cost controls leads me to the point which I consider the most challenging to transportation in the 1960's and one which will contribute the most to our national welfare. I refer to transportation integration. Too much sound and fury has been devoted to common ownership problems—too little to the integration of transport systems to benefit the shipping public, military and civil, with lower costs and faster delivery times. Each form of transport will have reached, by the end of this decade, a position of relative maturity. It is now no longer a question of monopoly and restraint of growth that is our national transportation problem. The real question is how can the special virtues of each mode of transport be harnessed together to benefit the shipping public and the national economy.

For example, the railroads are acknowledged to be among the very low cost transportation mediums. Yet, the railroads have a difficult problem with less than carload lot movements from shipper to consumer. The truck is an integral part of such movement and has found a positive place in the transportation world due to its flexibility. We Americans cannot do without either of these vital forms of transportation. Why not make a real breakthrough in the 1960's in the integration of truck and rail—whether it be piggy back, integrated container system, or combination rail and highway cars such as are now under development by our friends in the Chesapeake & Ohio Railroad. The question of who owns the system, developed by such integration is far less important to our Nation than the speed and flexibility of the truck combined with the speed and low-cost of the rails.

We find this improvement factor available to us in other combinations. The airplane and the truck are natural partners for door-to-door, one waybill, one responsibility handling. For the things which can properly move by air transport, with its great speed, the truck-air combination is needed and must come in the 1960's.

We have seen some real examples of combined transport in our combination of railship in roll-on-roll-off programs. Truck ship experiments are also opening new vistas for integrated transportation. The military has done an outstanding job in container experiments to prove the efficiencies of combined transport. To a great degree combined pipeline-rail-truck transport has shown the way to combining efficiencies of various modes of transport.

Costs of terminal and transfer freight handling are the plague of each mode of transport. These are the seemingly uncontrollable facts of life to each of us. Why should we have to rehandle a military shipment from production to battle area 5 to 10 times when if we could find the proper method of integrated transportation, we could package the product at production point, deliver it and store it if necessary in its own package by five different modes of transport without handling.

This great need for integrated transportation is the challenge to you transportation experts, military and civil. Here is the area which will most benefit America in the next decade. For high value items and perishables and the postal services, overnight, door-to-door service from any point in the United States to any other point is a possible and needed achievement for the 1960's. This can be achieved by combination surface and air transport, properly integrated.

The combination of truck-rail, further exploitation of pipeline-rail-truck-barge and ship will speed deliveries of all commodities

and combat inflation by the efficiencies achieved. The military benefits could be staggering in inventory and obsolescence factor alone.

Let us then accept the transportation challenge of the 1960's—integrated transportation. Let each mode of transport give its best in accomplishment in its own field and integration with other modes.

The Congress will be receptive where legislation is needed, if such legislation is progressive and in the public need. In maturity no mode of transportation needs fear for its existence. If common ownership comes as a result of integration of two or more modes of transport it will be an obvious and desirable move, not as a means of domination by one mode of another. We Americans need all forms of transportation, but now we need the best elements of all, combined in the task of providing the best in transportation at the lowest cost.

Let us accept this challenge.

## Resolution of International Association of Chiefs of Police

EXTENSION OF REMARKS
OF
## HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. CANNON. Mr. Speaker, by leave of the House I am submitting for the RECORD a resolution by the International Association of Chiefs of Police, commending Mr. J. Edgar Hoover for his leadership and cooperation in strengthening law enforcement at all levels of Government:

"Whereas the Honorable J. Edgar Hoover during his 34 years as Director of the Federal Bureau of Investigation has contributed immeasurably to raising law enforcement to a professional status; to the obtaining of public support and respect for law enforcement and to the ever increasing efficiency of our profession; and

"Whereas the Honorable J. Edgar Hoover has continued to make available to local law enforcement the facilities of the FBI in training, scientific examinations, identification, and the administration of the Uniform Crime Reporting program; and

"Whereas the Honorable J. Edgar Hoover has recently announced that special law enforcement conferences will be held throughout the United States, Hawaii, and Puerto Rico during November and December of this year wherein the FBI will outline to State and local law enforcement officers the cooperative services of the FBI in connection with bombings and threats of bombings against educational and religious institutions; and

"Whereas the FBI has already rendered invaluable assistance to State and local officers in the investigation of bombings and threats of bombings of education and religious institutions; and

"Whereas by his continued effective opposition to the nationalization of the police forces of America the Honorable J. Edgar Hoover has greatly strengthened law enforcement at all levels of government: Now, therefore, be it

"*Resolved*, That the International Association of Chiefs of Police at its 65th annual conference at Miami Beach, Fla., on October 31, 1958, does hereby commend the Honorable J. Edgar Hoover for his integrity, efficiency, leadership, and cooperation; and be it further

"*Resolved*, That copies of this resolution be forwarded to the President and the Attorney General of the United States and to the Appropriations and Judiciary Committees of the Senate and the House of Representatives and to the Honorable J. Edgar Hoover."

The foregoing resolution was unanimously adopted by the delegates to the 65th annual conference of the International Association of Chiefs of Police, asembled at Miami Beach, Fla., October 31, 1958.

In witness whereof, I have hereunto set my hand and affixed the official seal of the association this 1st day of December 1958.

[SEAL] LEROY E. WIKE,
*Executive Secretary.*

## Invocation, Statehood Celebration, Honolulu Stadium, March 13, 1959

EXTENSION OF REMARKS
OF
## HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. BURNS of Hawaii. Mr. Speaker, indicative of the depth of the religious faith of the people of Hawaii was the fact that in the midst of joyful demonstrations, the whole Hawaiian community turned to God with prayers of thankfulness coupled with devout prayers for guidance in meeting new responsibilities as citizens of a soon-to-be State.

In a statehood observance celebration at the Honolulu Stadium on March 13, 1959, the Reverend Dr. Abraham K. Akaka delivered the following invocation which movingly expresses the thoughts which were foremost in the hearts and minds of the people of Hawaii when the news first reached them that statehood had been approved by the Congress of the United States:

No Iehowa ka honua ame kona mea e piha ai, o ke ao nei ame ka poe e noho ana maloko ona, no ka mea, nana no ia i hookumu maluna iho o na kai, a i hoopaa hoi maluna iho o na wai.

Almighty God, our Father, before whose face the empires of the past have risen and fallen away, we thank Thee for the deep faith on which the foundations of our land were laid. We thank Thee for the sacrifices of its pioneers, for the remembrance of great leaders of our Nation whose wisdom has saved us, whose devotion has chastened us, and whose characters have inspired us. And we thank Thee for the great power committed to our care, by which we are challenged to do Thy will on the earth.

We thank Thee for statehood, and pray this prayer for our Nation. Establish this our Nation in righteousness; and in the personal character and public integrity of our people, make her foundations sure. Deliver us from the disgrace of political corruption and malicious designs of lawless men. Save us from prejudice of race and religion; from loss of liberties bequeathed to us by our forefathers; from careless acceptance of our heritage and neglect of its responsibilities; from failure of moral fiber in our citizenship, from vulgarity of life; from loss of social conscience and collapse of national character.

Keep us from pride of mind and boasting tongue. Save our national loyalty from narrowness and our flag from selfish shame. By our love for Thee and for our land, may we measure the love of others for their lands, honoring their devotion as we honor our own, and acknowledging Thee one God.

In the name of the Father and of the Son and of the Holy Spirit. Amen.

## Federal Excise Tax on Telephone Service

EXTENSION OF REMARKS
OF
## HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. MACDONALD. Mr. Speaker, I have received hundreds of communications from constituents in my Eighth Congressional District of Massachusetts requesting that the 10 percent excise tax on all telephone service be eliminated.

I agree wholeheartedly with my constituents in their feeling that this excise tax should be repealed. When this tax was proposed during the war years in order that our Government might receive larger tax revenues and unnecessary service would be curtailed, it was never thought that it would become a permanent fixture of the economy of our Nation. The longer these taxes are continued, the greater the danger that they will be perpetuated.

This tax is a consumer tax, collected by the telephone company and turned over to the Federal Government. I feel that these taxes are unfair and discriminatory against telephone users as a group. Telephone service has become a daily necessity. However, under the present situation Congress treats it as a luxury by subjecting it to the same taxes that are imposed on unnecessary luxuries. It is the only household utility service so taxed. The argument is made that we cannot repeal this tax because the Federal Government needs the revenue. This reasoning seems to be out of order because we all know that we can obtain needed revenue from other tax sources. For example, the revenue the Federal Government would lose by the repeal of this tax could easily be replaced by enacting a bill, H.R. 1845 introduced by me, or similar bills which would reduce the present depletion allowance given to the oil and natural gas industries from 27.5 percent to 15 percent. By plugging up this tax loophole, the Federal Government would receive $420 million annually.

Mr. Speaker, I repeat that the telephone users of my district are unhappy about having to pay excise taxes on this needed service. Their feelings on this important matter are well stated in a number of editorials appearing in papers published in my district. As these editorials make clear, the nature of the tax demands early repeal. I am sure Members of the House will find the editorials a constructive contribution to our thinking:

[From the Malden Press, Jan. 22, 1959]

TELEPHONE SERVICE IS NOT A LUXURY

Although never popular when payment is due, taxes are probably the most popular

topic of conversation in the country. Increased taxes have also produced many jokes on the absurdity of some proposed levies.

All of these jokes are not funny, however, and many fail to realize that some existing taxes are about as absurd as the ones joked about.

In reality, if you discuss high taxes with a friend over the telephone, you are taxed for doing that. If you telephone a public official to protest high taxes you are taxed for that. And if you decide to give in and call the bank concerning a loan to pay your taxes, you are even taxed for doing that.

Funny? It might be, if it weren't true.

A Federal excise tax of 10 percent is collected on all telephone service.

Despite complaining and joking, most Americans realize that taxes are a necessary part of living in a country such as ours, and that American life is well worth the cost.

Americans have every right, however, to voice stern opposition to unreasonable or unfair taxes, and the excise tax on telephone service appears to be just such a levy.

WAR MEASURE

In the first place, Federal excise taxes have been imposed on communications services only in times of national emergency such as World War I, the depression of the thirties, and World War II.

Each time the taxes were intended as a temporary measure. The high level of governmental expenditures in the immediate postwar period, extended by the Korean war and subsequent events, has thus far prevented elimination of telephone excise taxes.

Congress, in the 1954 Revenue Act, made the first step toward reducing high wartime excise tax rates. At that time the telephone excise rates were reduced to the present, though still high level of 10 percent.

It was noted in Congress that these taxes had been enacted to discourage use of service during the war as well as to raise revenue and reduce purchasing power, but no date was set for the end of this tax measure.

The public has a right, and even a duty, to demand such an end.

Telephone service is the only household utility subjected to such a tax and the rate is as high as the rate on such luxuries as furs, jewelry, and cosmetics.

There may have been a time when a telephone could be considered a luxury, but that time has long passed. Telephone service is essential to both home and business, and it is hard to even imagine how our country would function without the use of the telephone.

DOUBLE TAXATION

By paying a Federal excise tax on telephone service, users of the telephone (and who does not fall into this category?) are actually being doubly taxed.

Telephone companies as all businesses pay large corporation taxes and naturally these taxes are reflected in costs to the consumer. In regard to telephone service, however, the consumer pays not only this indirect tax but must also pay the direct excise tax.

All pay this direct tax on telephone service regardless of income or type of telephone use. It's 10 percent from everyone without any consideration of ability to pay or the need of phone service.

Another fact amplifying the discriminatory nature of telephone excise taxes is that following repeal of the tax on transportation of property, effective August 1, 1958, the telephone tax has come to represent more than 50 percent of all miscellaneous Federal excise tax collections.

To permit telephone service to bear such a disproportionate share of revenues derived from miscellaneous excise taxes is not consistent with fairness or sound taxing policy.

The next time you receive a telephone bill, study it closely. If you object to the 10 percent tax levy contained in it, complain by all means but make your complaints heard.

Let your Representative in Congress know that you object to such an unfair tax either by writing or calling him.

And if you call, it might be well to remind him that your ordinary taxes are paying his salary and, therefore, it seems a little foolish that you should have to pay a special tax for talking to him on the telephone.

---

[From the Wakefield (Mass.) Daily Item, Jan. 26, 1959]

TEMPORARY FOREVER

Put a tax on something and the chances are more than good that it will stay there, whether it is called a temporary tax or not.

Take the case of the telephone excise tax, for instance. The telephone was taxed during World War II, as an emergency measure. Other utilities are not taxed in this way, not the basic ones, like gas, power, and water. Yet the telephone tax remains, 14 years or so after the war's end, and whenever one pays one's tax bill, one pays an extra 10 percent in a tax that was levied to help the struggle against the Axis, a term in itself all but forgotten except by history students.

The telephone company in fact makes the excellent point that when you use the telephone you pay two taxes. One is the indirect taxation which is part of the price of anything for which the corporation providing it is taxed. This corporate taxation is part of the telephone bill, inherent in the price of the service sold. Then there is another 10 percent on top of this indirect tax. The total is, of course, millions of dollars a year, first deemed necessary to pay for a war but taken from the public ever since anyway.

The tax has been reduced, to 10 percent. Yet there still remains no justification for it at all. It puts the telephone, a necessity to anyone's existence today, in a class with liquor, cigarettes, and other luxury items from which Uncle Sam takes so much tax revenue.

The telephone excise tax is opposed by almost everyone, except the lawmakers by whom tax legislation is passed.

How long the tax will be permitted to remain in effect is largely to be decided by the amount and volume of complaints from the public. And the public should make a good deal of noise. It is being taxed permanently on the basis which was to end when the emergency of a war, now over more than a decade, ended.

---

[From the Stoneham (Mass.) Press, Feb. 19, 1959]

TELEPHONE TEA PARTY

Only fooling, Cousin; couldn't run my business without them. But these temporary taxes are getting to be a party—a tea party. Maybe a permanent tea party.

Look real hard at the next telephone bill you receive. There is a separate item called a telephone excise tax. What many of us don't know is that it is a Federal excise tax.

Mother Bell acts as a collection agency on this item and sends 10 percent of the charges for local and long-distance telephone service to Uncle Sam.

When this poor relative asked why, I got this answer: "Historically, Federal excise taxes are imposed on communications in times of national emergency on a temporary basis—World War I, the depression of the 1930's, and World War II." Also this: "The tax rate on telephone service is as high as the rate of tax on such nonessentials as furs, jewelry, cosmetics, liquor, and similar items."

Whoa, now, Cousin; let me ask a question: What war are we fighting now? What depression? What's temporary? As long as you accept the bite? You mean, Cousin, to call the police or fire department or emergency to my doctor, or even my relatives, is a luxury?

I'm inclined to think that Mother Bell is being hoodwinked by our Uncle Sam, sure as true love. I don't see any tax on any other household utility—gas, water, or electricity.

Well, this isn't Russia, so I think I'll write a little note to my Congressman; he loves to hear from me.

You should do the same, Cousin. Ax the excise tax.

---

[From the Somerville Journal Press, Feb. 19, 1959]

AN UNFAIR EXCISE TAX

No one likes to be taxed, but we all realize the necessity for taxation. Likewise, no one complains about fair taxation.

However, we are now paying a tax that has come to be completely unfair taxation, namely, the 10 percent Federal excise tax on telephone service.

An excise tax is a luxury tax that is placed on such items as jewelry, liquor, furs, cigarettes, etc. Certainly the telephone nowadays cannot be placed in the same category as these luxury items. This excise tax on telephone service cost the average customer $3.78 per month in 1958 in direct and indirect taxes. Most people are amazed when they learn the amount of the tax on their telephone service. Actually, it is the only household utility service that is subject to a use tax.

There has been agitation in Washington to get rid of this tax, but the Joint Federal-State Action Committee has not only ignored pleas to eliminate the excise tax on phone service but now proposes a split of the 10 percent levy on a six-three-one basis.

Six percent of this tax revenue would remain with the Federal Government and three percent would be returned to the State in which it is collected, to be used by such States for waste treatment projects and vocational educational programs. The remaining one percent would be distributed by the Government to those States collecting insufficient money for these programs.

This means, of course, that telephone users would be paying a Federal and State tax on service, and each governing body would have the power to raise its own percent on service at any time. And the way things are going, tax-wise, today the chances are that there would be an increase in this tax.

If the tax is unfair in the first place, and we so maintain, then the thing to do is get rid of it, not propagate it and open the way for a still further increase in the levy.

---

[From the Reading (Mass.) Chronicle, Mar. 19, 1959]

A DISCRIMINATORY TAX

Once taxed, always taxed. Apparently this is to be the philosophy of government at both the national and state level for years to come. Under the pressure of seeking new sources of taxation during times of seemingly endless emergency there is practically no type of financial or business transaction that has not been considered fair game for the tax collector.

Once such a levy has been made it is practically impossible to discontinue it, as emergency or no, increased government spending programs at all levels require more, not less sources of tax revenue.

A ludicrous example of how poor tax legislation can be perpetuated is the tax you now pay on the use of your telephone.

A tax on long-distance telephone calls was first enacted during World War I and was repealed in 1924, well after that emergency had ended. The long distance calls were again made the target of taxation in the depression emergency of 1932. In 1941, a year of obvious emergency, the tax was broadened to include for the first time local telephone service.

Subsequent revenue acts during the war raised taxes on telephone services to their highest levels • • • 15 percent on local service, and as high as 25 percent on long-distance calls. The rate of the tax levy was the same as the so-called luxury taxes on mink coats and jewelry. The justification for the tax given at the time was that it would discourage the use of an essential and overburdened vital service. In time of war it is impolite to argue with such reasoning.

Almost 14 years after the war has ended the tax is still with us only slightly modified from its highest wartime rate. It is an unfair, discriminatory tax. There is no semblance of luxury remaining in the installation of a telephone in your home or place of business. The telephone has become a basic utility, and without it the process of living in 1959 would come to a standstill. Better than 90 percent of Reading homes are now equipped with a telehpone.

A tax on telephone service today is little more than a head tax. A tax on that service appears to be no more equitable than would be a tax on the water you drink.

The telephone companies are battling this tax for you. They are big business and in such a debate their words many times hit an insensitive ear. Strange as it may seem, your opinion could carry more weight.

You might consider telephoning your Congressman the next time he returns to Boston. The tax on that call would be only 10 percent.

## Broadcasting Magazine Speaks Out on "Equal Time"

EXTENSION OF REMARKS
OF
### HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. CUNNINGHAM. Because of the mounting interest and concern over the recent ruling of the Federal Communications Commission pertaining to the "equal time" provision of the Federal Communications Act, I would like to once again call attention to the seriousness of this problem and the need for corrective legislation as proposed in H.R. 5389, which I introduced in the Congress recently. The position of the broadcasting industry, so ably expressed recently by Mr. Frank Stanton, president of the Columbia Broadcasting System, is reiterated in an editorial appearing in the March 23, 1959, issue of Broadcasting magazine.

Under leave to extend my remarks, I include this editorial:

SECTION 315'S LAST LEGS

If they succeed in obtaining repeal of the political broadcasting law, broadcasters will owe a great debt to three people, the President of the United States, the chairman of the Federal Communications Commission and a political failure named Lar Daly.

Those three have given significant momentum of the campaign against section 315 of the Communications Act.

The debt owed Mr. Daly is obvious. He was a candidate with utterly no future, a laughingstock. Yet the FCC, quite properly, we believe, decided that section 315 required Chicago television stations to give him time. If the FCC had decided otherwise, it would have been misreading the law. By applying it correctly, the FCC created the perfect illustration of one of the law's imbecilities.

The debt owed Mr. Eisenhower and Mr. Doerfer is also obvious. The President's description of section 315 as being "ridiculous" was apt. It must have effect on members of the Congress. Mr. Doerfer's call for repeal of section 315 must also be treated with respect. As the chief officer in charge of administering the Communications Act he is in the most expert position to observe its imperfections.

But however influential the President and Mr. Doerfer may be, repeal of section 315 will not come about automatically now that they have spoken. It will be extremely difficult to persuade the perpetual candidates on Capitol Hill to relinquish their grip on political broadcasting.

Repeal of section 315 will be achieved only by the most energetic work by broadcasters. They must exercise their most persuasive influences among members of Congress. The job will be among the most trying they have faced.

Frank Stanton, CBS president, realistically appraised the ludicrous restrictions of section 315 and the difficulty of removing them in his speech to CBS-TV affiliates in Chicago (Broadcasting, March 16). It was Dr. Stanton's letter to the White House that induced the President's comment.

The equal time provision is but one of several imbecilities in section 315. The whole section is a nightmarish example of the Government's trying to substitute a law for independent editorial judgment.

It is possible, of course, that Congress may be spared the necessity of grappling with the problem. The Supreme Court now has before it the WDAY-TV Fargo, N.D., libel case arising from the operation of section 315. It is our wishful thought that the Supreme Court may declare the law unconstitutional.

But the possibility of Supreme Court solution to the problem should not lull broadcasters. They should move at once on Capitol Hill to exploit the advantages which Messrs. Eisenhower, Doerfer, and Daly have provided.

## United Seamen's Service

EXTENSION OF REMARKS
OF
### HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. GEORGE P. MILLER. Mr. Speaker, we have all heard many times reports of American aid overseas. Always this relates to help for the people of other countries. Today I want to record the story of a dedicated group of Americans that is at work in the far corners of the world taking care of our own people. It is not the story of a Government agency. Today, when so much is required of Government, out of the maritime industry itself comes the story of an American organization that for 17 years has worked ceaselessly and tirelessly on behalf of our fellow men who are seafarers.

The organization of which I speak is the United Seamen's Service which was established in September 1942 at the request of the Federal Maritime Administration. The USS is a voluntary association, and its board has representatives from management, labor, government, and the public. In the words of our great World War II Maritime Administrator, Adm. Emory Scott (Jerry) Land:

In setting up a service for American seamen that reaches around the world, the United Seamen's Service is merely meeting a long-delayed debt, a payment on account delayed about a hundred years too long.

How effectively this debt is being repaid we have the word of one of our young American seamen. Because the service is being performed so far from home, it is a story with which we are, all of us, too unfamiliar. Still it is one more tale of American ingenuity, American achievement against obstacles. It is the story of a dedicated group of American workers who find it possible to enlist the understanding and moral help of such governments as those of Italy, Morocco, West Germany, and Japan in marshaling resources of foreign port communities to share in a service where service is most needed. The story is a constant reminder that in the hearts of our people lies the true greatness of America.

The following letter from an American seaman needs no explanation or interpretation. He speaks forthrightly on the accomplishments of the United Seamen's Service.

SS. "PRESIDENT JACKSON,"
*At sea, off California coast,*
*January 6, 1959.*

UNITED SEAMEN'S SERVICE,
*New York, N.Y.*

DEAR SIRS: Having nearly completed a voyage that has taken in quite a few world ports—21 outside the United States—and preparing to go on vacation, I though it would be nice to let you know how much I enjoy the United Seamen's Service Clubs whenever we hit a port where one is in operation. I happened to run into a piece of your literature, a folded pamphlet entitled "So You'll Know" and this explained something of your activities, as well as providing me with an address.

Naturally I have run into some of the joints using various combinations of "united," "seamen's," "service," "club," etc., and having no clear understanding at the time of the manner in which the good name of the real United Seamen's Service was being traded on, had sometimes wondered how you could permit some of your overseas branches to be run on such a low grade level. Sometimes, after a brief tour inside, I would check the sign again that appeared on the outside. But, of course, the words "United Seamen's" looked genuine enough, and I would lay the trouble to your inability to get competent native managers, plus a certain slackness that had crept into your organization since the war. Though there is really little humor in the situation—other than of a wry sort—I have smiled to myself at the manner in which I have accepted some of the counterfeits as genuine, gently chiding you in my mind for the low level to which you had let some of them slip. For this error, I want to offer my humble apology.

Our last stop, prior to returning to the States, was Italy, and I must say that the United Seamen's Service clubs in Naples and Genoa were wonderful. I can't help thinking of the "seamen's clubs" in Korea (Pusan) that sounded like a good spot until one of the ever-present guides took me there, even though I didn't need him and kept trying to shake him. But he was a persistent fellow and wouldn't shake, even accompanying me into the club.

I don't remember exactly what the sign on the outside said, though it was some combination of "united" or "overseas" with "seamen's". Inside was a spacious room with

at least 15 or 20 tables and, at one end of the room, a decrepit bar that was generous in length and generous with dirt. The general decrepitude of the bar matched that of the entire place, and there seemed to be nothing there, in the way of service, but the bar—which was probably a good thing, considering that alcoholic beverages at least have the virtue of being free of harmful bacteria.

After hanging around the club long enough to discourage my guide, who finally left, I myself went out without having contributed anything to the club's upkeep. Outside, I took another look at the club's sign—with a tut-tut in your direction—and noticed another posted by the United States or allied armies, "On limits for beer only"—a very wise idea.

In your tastefully appointed Yokohama club the aviary adds its own charm to genteel surroundings, and after one visit I became a regular.

Because of certain restrictions that, on prior trips, had surrounded the exchange of money in Okinawa, I hadn't been going ashore. This last trip, however, U.S. money was being accepted freely, without restrictions. I haven't seen this club, but those who have been there say it is excellent.

Returning now to your two clubs in Naples and Genoa, the seamen who visit the clubs are greeted with singing and music designed to make them feel at home and welcome. In addition, the dancing provides a healthy outlet for exuberant spirits. One may enter either of these clubs just for a sandwich and coffee, or perhaps to mail a letter, with no particular awareness of a need for a lift. In a short while, however, the music and singing, and the general atmosphere, has made you glad you are there. In fact, aboard ship, those men as myself who patronize the United Seamens' Service clubs actually look forward to reaching certain ports so we can renew acquaintance with those in the clubs that we have already met on prior trips.

The homey atmosphere of the United Seamen's Service clubs seems to derive from a carefully thought-out combination of service, facilities, and grouping or layout. Yet these can't be clearly separated, as they are all interwoven to some extent. However, in regard to layout, part of the atmosphere is due to arrangement of the entire establishment around a central room, with easy access to all areas. I'm reminded of Connell House in Singapore, a club for seamen of all nationalities. This is a mammoth place by United Seamans' Services' standards, yet though Singapore must be host to more than a hundred seagoing ships a month—I don't know even the approximate figure—it is a place where seamen do not usually care to go. Though the cost of its establishment, if measured in today's money, must have been great, seamen will tell you it's a great place to go if you want to die. There is no life there, and few patrons. Their figures naturally would include seamen who live there for varying periods, due to necessity, while waiting for a ship. They have rooms for this purpose.

One reason for the lack of warmth in Connell House, despite Singapore's 1° proximity to the equator, is the manner in which each department or service is carefully partitioned and isolated from every other facility. You can get from one to the other by going out into an unnecessarily spacious hall and walking 25 to 75 feet. In whichever area or department you happen to be, you feel isolated from the place as a whole. Even the bar, which perhaps is the facility most heavily patronized, depresses with its air of isolation. As a result, not even the bar is a popular spot in Connell House. What United Seamens' Services could do to an establishment like this.

In Italy the United Seamens' Services clubs are always crowded at night. Though many seamen may find various other spots more to their liking, the tables in the United Seamens' Services clubs are always filled, at least that has been my observation. The dancing is appreciated by both participants and spectators alike, and the music is of the right sort. I am convinced that at least in Italy, both the club in Naples and Genoa could fill more tables if they had them. The one in Genoa would be handicapped in this respect by a lack of space. Both are doing an excellent job.

This letter started out as a short note of appreciation, but has turned into a rather wordy report—the 2-minute speaker who talks an hour. For this you will have to excuse me. In some places I have noticed where the wording could be improved upon. Yet this is a once-over project, without notes or rewriting. At least, when I return from my vacation I'll not be reminded of the letter I should have written to you, but didn't.

Best of luck with your clubs.

S. P. CLARKE, Jr.,
*Third Engineer, Providence, R.I.*

That you may more intimately know of the operation and organization of this fine service, I quote from one of its publications, Facts:

UNITED SEAMEN'S SERVICE

What is it?

USS is the only voluntary American agency providing health, welfare, and recreation services for American seamen in foreign ports.

Why is it?

Seamen who man our ships are essential to our national security. Their welfare in foreign ports where they are unfamiliar with the language, the currency, and the customs is important both because it generates international good will and because it contributes to their efficiency once they are back on board ship.

Where is it?

USS services are provided in overcrowded foreign ports where our seamen are most likely to be victimized. To an American seaman these services are tangible evidence that democracy follows him round the world. Location of operating units in 16 overseas ports enabled USS field staff last year to serve American merchant seamen at 30 points active in American shipping.

Why voluntary?

USS is a voluntary agency because, in a democracy, this kind of program is the responsibility of the people, not of Government. USS services are part of the overall health and welfare program provided by the people for their fellow Americans. In truth, USS services are simply extensions of the health, welfare, and recreation services that would be provided for seamen if they were both working and living in their home communities. Seamen come from all sections of the country, so it is logical that USS seek support from all sections of the country.

How supported?

Approximately four-fifths of USS' operating expenses derives from the sale of food, beverages, and souvenirs to seamen at USS centers. The other fifth is covered by the support of Community Chests and United Funds of the country. The National Budget Committee has approved USS' total operating budget for 1958 and has made available its support plan attesting to the validity of USS' public appeal.

What does USS provide?

The USS program is flexible enough to meet the shifting demands of the changing international situation. The recent emphasis on ship-centered operations is a practical approach, recognizing the inadvisability of setting up permanent building-centered programs in foreign ports where the need may continue for a year or so, then suddenly shift to other troubled areas of the world. In these ports USS workers go on board ship to give seamen valuable information about such things as danger spots on the waterfront, recent incidents, national antagonisms, available transportation and recreation. USS workers arrange transportation where none is available and set up recreation programs where it is desirable. For these and other personal services, there can be no price tag. In USS centers seamen pay reasonable fees for services received, thus putting these services on a self-supporting basis. But, whether they operate a club or work on shipboard, USS workers give personal aid and guidance to seamen, since the problem may involve communication with families, illness, and hospitalization, or any one of the many welfare needs that are regularly met for their fellow citizens at home.

---

## The Keys for the Peacemakers

EXTENSION OF REMARKS
OF
### HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. BOSCH. Mr. Speaker, I think this is a good time for us to pause and give serious thought to the true source of peace—through God and His teachings peace can be found.

Under leave to extend my remarks, I include an article by Leonard J. Demchak, my constituent, entitled "The Keys for the Peacemakers."

THE KEYS FOR THE PEACEMAKERS

The question has been asked many times "Why does God not stop the worldwide cold war and prevent a shooting war?" Webster's dictationary states that peace is the harmony in personal relations, freedom of war, friendliness, state of quiet, calm, and security.

This business of life consists of God and man working together for the same purpose—peace, for instance.

If God gave us peace in spite of ourselves and if He were to interfere with all the natural effects of selfishness, pride, anger, and lust, if God were to make no requirements of us, no conditions, then He would be our omnipotent servant. God did not create us in order to serve us, but in order that we may serve Him; this applies to public officials, politicians, to businessmen, to everyone.

Peace depends on the willingness of all of us to do God's will because we love Him. There can be no other way to obtain the real peace of universal order.

Today there are so many people willing to destroy the very foundation upon which peace is built: (1) It is evident that God has been chased out of our public schools because He is too controversal (in Merrick, Long Island, a court battle is ensuing to prevent the public-school children from saying a little nondenominational prayer before classes begin). (2) Refusal of governments to cooperate to bring peace into the world using God and His commandments as a guide. (3) Refusal of governments to recognize the rights of all social and religious minorities within their territories. (4) Breakdown of our moral virtues (humility, charity, piety). (5) Increasing number of divorces, broken homes, neglected youth, juvenile delinquency, and crime. (6) Lack of harmony among neighbors and friends. (7) Diplomats at international conferences openly speak of peace, disarmament, and unity, yet in secret meeting their agreements

and actions are contrary to everything that would bring everlasting peace.

We, therefore, ask you to heed the advice of St. Augustine when he said, "You should promise to yourselves, to your university, to your parents, and to your country, that whether the times be evil (and they are) or not, whether you can change in these times or not, you do promise to live nobly, after the fashion of the God-man whom your families and your university have given to you as the model of human living to act nobly, think nobly, live nobly, nobly as it takes to live in God's image."

We, as an organization and as an individual can and should become God's peacemakers—this can be best done by taking an actual part in the following program:

1. Let your elected statesmen know that they must have an acute sense of responsibility which measures all human law according to the law of God.
2. Petition the United Nations to guarantee the rights of nations, to freedom of religion, educational, and cultural development and political equality.
3. Promote a program to eliminate social and religious prejudice, bigotry, and falsifications of propaganda and other forms of distortion.
4. Restore to the home conjugal fidelity, family peace, mutual help of the spouses, and religious education of the children.
5. Seek legislation to tighten and enforce laws that will safeguard the morality of our youth (indecent literature, entertainment, etc.).
6. Organize and instruct our neighbors in the kind of leadership that can transform conflict into cooperation, bickering into peace.
7. Work and pray for peace daily.

Peace with harmony is God's will.

The right to liberty is the right to worship.

## Power Among Men

EXTENSION OF REMARKS
OF
### HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. IRWIN. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to NBC's television program Easter Sunday when "Power Among Men," a motion picture dealing with man's capacity both to create and to destroy, will be color cast in its first color showing of "Omnibus" between 5 and 6 p.m.

Filmed in many parts of the world with local residents in place of professional actors, "Power Among Men" explores man's innate ability to build, destroy, and build again on the ashes of destruction. It seeks to answer a question especially vital in the atomic age—which of these human drives is dominant, the creative or the destructive?

Dr. Ralph Bunche will appear on the program to introduce the presentation of "Power Among Men." In his words:

"Power Among Men" deals not with the U.N. but with human psychology.

He goes on:

"Power Among Men" looks at power—man's paradoxical power to build and to destroy with equal genius. It also looks at motivation in the use of power.

The United Nations has made numerous films, but it, and possibly no one else, has ever undertaken such a production. I commend it to your viewing.

## Russian in High School?

EXTENSION OF REMARKS
OF
### HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. MADDEN. Mr. Speaker, Hoosiers are glad to learn that our new Democratic State superintendent of public instruction, William Wilson, is discarding some of the provincial policies of his predecessor. We are living in a global world and our youth should be educated and trained to compete with 20th century international problems.

RUSSIAN IN HIGH SCHOOLS?

The Senate commission on general education has finally come around and decided Indiana high schools may schedule classes in the Russian language.

The decision was one of the final ones made during the tenure of Wilbur Young as State superintendent of public instruction. Young was succeeded last week by William E. Wilson, of Jeffersonville, the victor in last November's election.

The commission took fright last summer when Gary and several other city school systems sought approval for classes in Russian. Somehow it has resolved its fears and has decided the Russian langunge may be studied without turning our youths into young Communists.

But only under certain conditions.

Two are of the routine sort. The State textbook commission must approve textbooks for the course. And the teacher training and licensing commission must set up qualifications for teachers. It is possible, of course, for either commission to stymie the program.

But it won't make much difference. The third condition set up by the general education commission practically insures that only a minimum number of students will register for Russian instructions.

The condition is that only students who have been or currently are enrolled in another modern foreign language course will be permitted to take Russian.

A student must take 2 years of a foreign language in high school to get credit for it. Thus the State's rule means any student of Russian must schedule 4 years of modern foreign language—2 years of Russian and 2 years of French or Spanish, for example. If he didn't take French in his freshman year, he'll have to study both Russian and French in his junior year.

It would make as much sense to insist that no student take Spanish unless he also took German, or that no student could take French unless he also took Chinese.

The regulation makes a phony out of the whole decision to authorize instruction in the Russian language in the Indiana high schools. It appears to approve when in fact it disapproves.

Wilson is now the state superintendent of public instruction. We hope he will instruct the general education commission in the facts of life, something his predecessor did not understand.

## The Veterans' Administration Commended

EXTENSION OF REMARKS
OF
### HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. POAGE. Mr. Speaker, almost daily Members of Congress receive letters from constituents complaining of the treatment that their constituents or members of their families have received from the Veterans' Administration in one way or the other. Seldom do we get letters commending the Veterans' Administration for the services their employees render to the veterans.

Today we received a letter from Mrs. Ike Ashburn, whose husband has been confined to the Veterans' Hospital in Temple, Tex., for the past 11 months. This letter is so extraordinary that I felt that it should be placed in the RECORD. It is obvious from the letter that Mrs. Ashburn is moved by the wonderful attention shown her husband. I might add that we have been told several times of the splendid services that this hospital has been rendering to veterans, but have not received a letter so thoroughly covering the matter as this one. You will see that the letter is addressed to the Honorable OLIN E. TEAGUE, chairman of the House Committee on Veterans' Affairs, who has consented to my placing the letter in the RECORD.

TEMPLE, TEX., March 25, 1959.

Hon. OLIN E. TEAGUE,
*Chairman, House Committee on Veterans' Affairs,*
*House Office Building, Washington, D.C.*

MY DEAR OLIN: Today marks 11 months since Ike was admitted as a patient in the McCloskey Veterans' Administration Center. I ask you to please consider this letter along with the one I wrote you on May 28, 1958.

Ike's condition is again improving after a temporary setback. I am convinced the only reason progress is not faster is that he was in such critical condition and had so many health problems from the beginning.

The perfect care and attention continue. I am certain this is the most wonderfully administered and staffed hospital in the country—private or otherwise. Dr. Raleigh R. Curtis is now handling his case and has been for many months. He is a dedicated man of medicine, gives every thought to the welfare of his patients and has a deep personal interest in each of them.

I should like to again commend Dr. L. M. Cochran, Dr. Warren B. Smith and Dr. W. P. Chrisman for their continued interest and attentions. Mrs. Mary Alice Levy continues to ably supervise a group of very fine nurses and aids on ward 17A. The aids whom I want especially to mention for their outstanding care are: Douglas C. Truesdale, Walter T. Parker, Lloyd A. Harrington, Winfred L. Hawthorne, Floyd Honeycutt, Sam G. Dorethy, and Ben Lanier. My husband's skin condition is perfect after these many months in bed; and this is only another evidence of the meticulous care he has received.

Yesterday he was taken to therapy, after having received mild manipulations in bed for some weeks. Miss Mary Lou Suddath and Mrs. Elsie B. Sherman, together with the competent men in that department, deserve

great credit for his ability to again stand with assistance.

Mr. Joe Fry, contact man for the Veterans' Administration, and his staff have been most helpful in matters that required their assistance.

It is impossible to mention the countless numbers who have made these months of anxiety possible to bear. Chaplains James M. Hamilton, Harry F. Miller and Hiram J. Eastland continue to bring great spiritual comfort. I am regular in my attendance at chapel; and I always receive a great benediction.

Ike remains on the critically ill list. While he continues to have the hazard of additional complications from his fundamental diseases, those in attendance are pleased with the control of his blood pressure and the present status of his circulation.

Everyone is amazed at Ike's stoicism and the gracious way he has accepted his infirmities. No one ever hears him utter a word of discontent, criticism or unhappiness.

I have no way to express our great appreciation of the personnel of this hospital except to ask God's blessings on each and every one of them.

With every good wish,

Sincerely,

MRS. IKE ASHBURN.

## A Better Planned Defense

EXTENSION OF REMARKS

OF

### HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. GEORGE P. MILLER of California. Mr. Speaker, the forthright editor of the Fremont, Calif., News Register wrote the following editorial in the March 19, 1959, edition.

The News Register is politically independent. It never takes a purely partisan position but, as a good newspaper, it weighs the merits of an issue before espousing it:

A BETTER PLANNED DEFENSE

Once again America is faced with an international crisis, the end of which is advertised as war. This one comes about because Russia's Premier Khrushchev delivered an ultimatum: Get U.S. troops out of Berlin by May 27, or he will turn control over to the East Germans. The implied threat: East Germany will close off land routes to Berlin and Russia will back East Germany.

In 1948 a similar situation brought the Berlin airlift. But Berlin and Russia have grown beyond salvation-by-airlift in the past 11 years. Another airlift would be (1) inadequate to supply the giant city, and (2) subject to effective interference by a Soviet power which didn't possess the atom bomb in 1948 but which does today.

America must first proceed on the assumption that Khrushchev means what he says (if he can get away with it). That is: He will blockade Berlin (and resist American attempts to get in after May 27) with the entire Soviet armed might, including missiles carrying multi-kiloton nuclear weapons to New York, and so forth.

Anything less than presuming that Russia means business is criminally dangerous for the United States. Maybe the Russians won't shoot. There are plenty of good reasons why they might not. But if there's a 1-in-100 chance that they will, we have to be ready to counter it, or risk nuclear defeat. Are we ready?

The generals and the scientists say no, that we are years behind Russia in missiles, that the nuclear bombing planes on which we place our reliance are obsolete.

The administration, headed by a one-time general, assures us that all necessary measures have been taken, that too much defense is just as bad as too little, that bankruptcy could deliver us to the Kremlin as easily as unpreparedness.

Granting that this is so, we ask why the $41 billion budget for defense has given us so little security? Why $7 billion has been wasted in the past year on complicated missiles which turned out to be obsolete before they were launched, on duplicate purchases by rival defense agencies, on unrelated, familiar follies?

What has happened to the number one defense bulwark—an anti-missile missile? The Nikes Zeus or its relatives have been proposed for several years as the answer to diplomatic missile blackmail by the Russians. Yet Zeus and his Olympian cousins are still earthbound, hardly even on the drawing boards, while defense agencies spent billions outdoing each other with airplanes or odd-ball rocket experiments—costly trinkets which fail to echo the basic issue:

First things first. How can we fight missiles with anything but faster missiles?

Our President scolds his critics, safe in the assertion that he has commanded more armies than they. All this took place a generation ago. The U.S. defense picture needs another look. By fresh lookers, unbiased by what happened at Bastogne, Okinawa, or Gettysburg.

America needs not to spend more money on defense, but to see that our vast resources, which smothered our enemies in World War II, are used to the very best advantages, not frittered away on a perilous attempt to rehash something we were able to do in 1945.

Russia is watching smugly to see if we've learned the lesson.

## Reduction in Subsidies to CAB Feeder Lines

EXTENSION OF REMARKS

OF

### HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 25, 1959*

Mr. BOW. Mr. Speaker, during the debate on the second supplemental bill this week I had expected to call the attention of the House to the reduction made by the committee in the subsidies allowed for service carriers of CAB. These are the small air carriers or commonly known as feeder lines. There was a substantial reduction in the amount of subsidies allowed because the testimony before the committee did not substantiate the full amount requested. It was felt the amount allowed would be sufficient to carry on until the next fiscal year appropriations were made.

Mr. Speaker, some of the operators of these lines have expressed the fear that the reduction in the appropriation might show congressional intent to reduce all subsidies in the future. This is not true. I believe I can speak for the committee in saying that we recognize that as of this time it is necessary to have subsidies for these air carriers and that such amounts as may be necessary under law will be appropriated. Also, if the amounts here appropriated are not sufficient, appeal may be made to the other body and if a proper record is made, undoubtedly the matter can be worked out in conference between the two bodies. I repeat, Mr. Speaker, that there is no intention to destroy the feeder lines or the small operators in this Nation. It has been the policy of the Congress in the past to do that which is necessary to keep them in proper and safe operation. They may be assured that this is still the policy of the Congress of the United States.

## Why Recognize Red China?

EXTENSION OF REMARKS

OF

### HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, February 25, 1959*

Mr. QUIE. Mr. Speaker, there appeared in the March 17 issue of the Lutheran Herald, a timely and well-written article which explores the moral reasons for not granting recognition to Communist China.

I am very much gratified to present this scholarly article because I have long believed that recognition of Communist China by the United States is unjustified and unwise.

WHY RECOGNIZE COMMUNIST CHINA?

(By Dr. R. A. Syrdal)

Some church groups and organizations have for some time been waging a campaign to have the Government of the United States recognize Communist China. These many efforts seem to have crystallized in a resolution adopted at the Fifth World Order Conference, meeting in Cleveland, at the call of the National Council of Churches, November 18–21, 1958.

Declaring that our Government "has demonstrated a frightening insensibility to international reality," it requests that "Christians should urge reconsideration by our Government of its policy in regard to the People's Republic of China." As it urges recognition of China, it also requests that "steps should be taken toward the inclusion of the People's Republic of China in the United Nations." It concludes its paragraph on China with the sentence, "We have a strong hope that the resumption of relationships between the peoples of China and of the United States may make possible also a restoration of relationships between their churches and ours."

I do not believe that the purpose of this resolution was to aid communism, since it states definitely that "Such recognition does not imply approval." On the other hand, there are certain facts that would seem to make it impossible at this time to recognize China without giving approval. The jubilation of the Communist press at the action taken in Cleveland would indicate that, at least, they saw some advantage accruing to their cause from the proposed recognition.

It is probable that a de facto recognition of the Communist government of China could have been given in 1949 without implying approval. Cognizant of the fact that China had been subjugated by a small political bloc under Russia's tutelage for the enslavement of the people of the entire country, our Government at that time refused such recognition. By that act, recognition of China be-

came a moral issue. Recognition now would indicate either a change in the attitude of America or a change in the policy of China. China has not changed its policy.

Since that time the enslavement of the people has proceeded with studied ruthlessness. Branches of the U.S. Government have verified that at least 20 million people have been killed in cold blood, and that an additional 25 million have died of starvation in slave labor camps. The present communes established in rural areas have gone far beyond the collective farm policies of Russia in abolishing the family and making the individual a pawn of the state.

We have heard much of the right of the church to speak up on moral issues and to serve as a conscience for the state. Are we now, as Christians, rebuking the state when it exercises a Christian conscience and acts on the basis of the moral rights of individuals?

There is every reason to believe that some relationship between the church of Communist China and churches of the United States will be established if government recognition is granted to China. This relationship could, however, only be established with the church that is officially recognized by the Communist government of China. This would include only those pastors who have signed the Communist manifesto and agree with the creed of the new church unified by the government. It places obedience to communism and service to its government above all other items of a watered-down Christian faith.

The church that we would have relationships with is under full control of the Communist government through the educational propaganda agency, the three self-patriotic committee, and its pastors are considered as its agents. U.S. churches would, therefore, be having fellowship with representatives of a Communist organization rather than with the church. Would that be true Christian fellowship?

In establishing fraternal relationships with the official Church of China we would at the same time repudiate the pastors who have, for the sake of conscience, refused to sign the Communist manifesto, and who, from Christian conviction, have continued preaching the Word, sometimes facing death or imprisonment, sometimes going underground, always in danger, but faithful to the unadulterated Gospel of Christ.

The situation in China differs from that in East Germany and some other European countries where the church continues to function as a true church of the Gospel in spite of the state. In China the government took over the church and through gradual steps has made it one of its own agencies. Great numbers of pastors and evangelists could not accept the conditions laid down by the government. Their consciences were bound by God. They would rather serve Him as men hunted by the government and denounced by its church rather than bind their conscience to the godless state. The hand of fellowship held out to the official church means a hand denied to these men and women of faith.

The official periodical of the Communist-recognized church in China is T'ien Feng. From articles in this periodical which have been reprinted in the China Bulletin, we learn: (1) All Protestant churches in China have now been forced into one unified organization called by some correspondents from China the state church. (2) There has been a great reduction in numbers of churches. Church buildings closed to worship have been taken over by the Government for its use and its pastors sent into industry or farm communes. (3) Free activities of the church are completely banned. Group gatherings and house meetings are barred. All congregations are now under the political authorities and the program is dictated by these authorities.

The China Bulletin reports from articles in T'ien Feng: "In August the 65 churches of Peking were merged into four churches. This merger of course released a large number of preachers, Bible women, and theological students for participation in the great leap forward in economic production, and T'ien Feng states that 150 of those from Peking were assigned to labor in farm communes. As to the church property vacated by the wholesale merging, it states that all was turned over to the government for public use.

"This action in Peking was followed the next month, in September, by similar action in Shanghai, where its 200 churches were merged into some 12 or 15 churches. Other reports tell of the same process going on in other cities—Tientsin, Wenchow, Taiyuan, etc. One short article tells of the unifying of the Anglican and C.I.M. churches in Tali, Yunnan."

The method and purpose of this unification can best be seen from the articles of the Taiyuan churches, as reported in T'ien Feng:

"There shall be unified worship for the city of Taiyuan, and a ministerial staff of three or four. All fellow workers besides these and those assigned to the three self office shall thrown themselves into the socialist construction of our mother country; those who are older or physically weak shall retire. All real and movable church property and all church funds shall be turned over to the three self patriotic committee.

"Church organization: (1) All former governing committees and boards of the various churches are hereby abolished, and the administration of the church shall be in hands of the three self patriotic committee.

"(2) Regarding ritual, regulations, and church order:

"1. There shall be a unified worship program, and each church shall surrender its own individual ritual.

"2. The hymns used in worship shall be unified, and a committee shall choose and edit the hymns for use.

"3. All books used in the interpretation of the Bible shall be examined and judged, and those containing poisonous thoughts shall be rejected. Only teachings favoring union and socialism shall be used. In particular, any material coming from outside shall be carefully examined before being accepted.

"4. There shall be no more preaching about the last day, or about the vanity of this world. This is negative and pessimistic teaching. Instead we shall emphasize the need for the union of faith and practice, the dignity of labor, the control of nature, and the dividing line between ourselves and our enemies, between right and wrong.

"5. Belief and unbelief shall not be made an issue in determining marriage questions.

"(3) In regard to the necessary reform of each church:

"1. The little flock shall abolish its women's meetings, its weekly breaking of bread, its personal interviews with members before the breaking of bread, and its rule against women speaking in the church.

"2. The Salvation Army shall give up all its military regulations.

"3. The Seventh Day Adventists shall abolish their daily morning prayers. On the sabbath they shall participate in beneficial good works and economic production. Their tithe system for the support of the clergy shall be abolished and also their unification of accounts for Shansi province.

"4. All the YMCA secretaries shall be assigned to productive labor and the closing of the Taiyuan YMCA as a separate organization shall be carefully considered."

From a private report from Shanghai we have the following comments on the life of the church: "Attendance has fallen off, partly because so many work on Sunday. The weekly rest day may fall on any day and is often filled with meetings. One of the latest resolutions is that services on Sunday must not be allowed to interfere with work."

The constant emphasis throughout the past year in China has been on the necessity of every individual Chinese citizen surrendering his heart to the Communist Party. This emphasis has also been felt in the churches from the beginning of the Communist regime. It is evident that the government is asking the church to surrender its heart—the Gospel of Christ—to communism until it becomes the full servant of that party.

While church groups in America are delving into international politics it will be well if they study carefully the spiritual problems that beset the Christians in China. Rather than seeking fellowship with the members of the official church of communism, we should unite in denouncing the Communist rape of this church and in incessant prayer for the Christians who are struggling against this demonic power to maintain the faith.

## More on Equal Time

EXTENSION OF REMARKS
OF
### HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. CUNNINGHAM. Mr. Speaker, in a recent editorial the Indianapolis Star stressed the serious threat to freedom of broadcasters to keep the public informed of news happenings, even though such news might pertain to a candidate for political office, posed by a recent ruling of the Federal Communications Commission.

Under leave to extend my remarks, I include the editorial in the RECORD:

NEWS FOR THE NOSE

The Chairman of the Federal Communications Commission foresees a complete blackout of political news reporting and special political public-service presentations on radio and television unless the Federal law requiring equal time for all political candidates is repealed or revised before the 1960 campaigns. If an interpretation given to this law by the FCC last month stands, he is right.

The equal time requirement, briefly, is that when a candidate for political office appears on radio or television, the station or the network, as the case may be, must make available equal time under the same conditions to each other candidate for the same office who demands it. Heretofore it had been supposed that this section of the law applied to appearance essentially related to political campaigning.

Now the FCC has ruled that the requirement applies to news broadcasts. References to a candidate in a news report, quotations from his statements or photographic coverage of his activities, must be matched by equal news broadcast time for all other candidates for the same office, under this ruling.

In practical effect this will mean that the networks and most stations individually will be restrained from any news report references to candidates for any major office. The restraint will apply not only to news

about the campaigns but to any event concerning a candidate which ordinarily might be news. Dr. Frank Stanton, president of the Columbia Broadcasting System, put it this way: "Such major news events as an assassination attempt on a candidate for public office could not be shown on a television newscast—unless the attempt succeeded and the victim was therefore no longer a candidate."

If this decision stands, henceforth political news on radio and television during any election campaign period will come to you filtered through the censorship rules of the FCC. Bear in mind that we're not talking about political advertising or sponsored campaign appearances. We're talking about news.

This in itself is serious enough. But even more serious is what it foreshadows for newspapers and other means of keeping the public informed. In a number of significant decisions the courts have held—rightly—that freedom of the press is not limited to newspapers, or book publishers, or other narrowly defined media of communication. The marked trend of the courts is to hold that freedom of the press embraces all general means of gathering news or ideas and relaying them, whether in language or pictorial form, to the public. Radio and television are included.

It boils down to this: If radio and television news can be put through Government censorship today, all other news ultimately can and will be put through the same filter.

This iniquitous equal time law should be repealed, before it causes the kind of serious damage to freedom which is now openly threatened.

## The New Pat Brown

EXTENSION OF REMARKS

OF

## HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 24, 1959*

Mr. GEORGE P. MILLER. Mr. Speaker, Gov. Edmund G. (Pat) Brown, of California, is doing a workmanlike job that is commanding the respect of all the people of California. As evidence of this, I invite your attention to an editorial in the March 19 issue of the Hayward, Calif., Daily Review, which certainly could not be classified as a Democratic paper.

I am also pleased to make a part of my remarks, an article by Harlan Trott which appeared in the March 16, issue of the Christian Science Monitor. Mr. Trott's article defines another side of Governor Brown's activities:

[From the Hayward (Calif.) Daily Review, Mar. 19, 1959]

THE NEW PAT BROWN

A new Pat Brown is beginning to emerge from the political woods, and it's evident the babe who went into those woods has vanished.

The change began last year in the campaign for Governor when an uncertain, lackluster attorney general started running in earnest for Governor. It picked up speed thanks to the political skill of his opponent even though Brown refused to face him in campaign debates.

The million-vote edge he piled up over his nationally recognized adversary accelerated the process. His appearance before television cameras only hours after the polls closed already hinted at the new Brown.

Three events since that time have thrown this political metamorphosis into sharp relief. First was the hot fight among national Democratic leaders over where next year's presidential convention was to be held. When Los Angeles won, Brown automatically secured an important position within the party.

Back in Sacramento, his programs and budget made surprising changes in political alinements. Earlier opposition began to weaken and Brown scored important gains, particularly in the water controversy and with his balanced budget.

Finally, with these important marks in his favor, the Governor went east to meet the veteran politicians on their own grounds last week. He submitted himself to one of the toughest of tests and made his points with skill before the most critical of audiences.

When some suggested during last fall's campaign that Brown's victory would make him a national contender, snorts of derision were many. They have vanished today because the Brown who has become a national political figure is not the same Brown heard and seen by Californians in last year's campaign.

[From the Christian Science Monitor, Mar. 16, 1959]

CALIFORNIA TAPS BIG BUSINESS VIEWS

(By Harlan Trott)

SACRAMENTO, CALIF.—Big business is being given an important role in Gov. Edmund G. Brown's scheme of "responsible liberalism."

Although Governor Brown's State labor support was probably just as influential as Gov. G. Mennen Williams' in Michigan, California's new chief executive wants business and commerce to have a big voice in his policy decisions.

California's newly appointed Governor's Business Advisory Council started out with a roster of 32 top industrialists. Now Mr. Brown has just added nine more to the list, including Frank Pace, Jr., former Secretary of the Army and now president of the General Dynamics Corp. at San Diego; J. H. Kindelberger, chairman of the board of North American Aviation Co. of Los Angeles; and published Clinton D. McKinnon of the North Shore Sentinel of San Diego and former U.S. Representative in Congress.

OPINIONS SOUGHT

Governor Brown already has called this business "cabinet" together and asked for their "full, free, and frank" opinions on the State's economic policies. Their deliberations and advice are off the record, so that they will be free to analyze business affairs without giving away any secrets.

"You know a great deal about California's economy and the business community's role in it," the Governor told them, "and I want to know how you feel about anything this administration does that affects you."

Governor Brown thinks his business advisory council will benefit business and professional men, too, by giving them added insight and information on the problems of government.

The council's indoctrination began with a report by Mr. Brown's finance director, Bert Levit, on the Governor's budget and tax proposals and a general discussion of the State's fiscal situation.

Mr. Levit is asking that the State look ahead 2 to 4 years in its fiscal moves. "Looking back over past State finance, we find a tendency to err," he says. "In January, 1937, Governor Merriam submitted a 2-year budget anticipating a $20 million surplus. Actually there was a $36 million deficit. In January, 1939, Governor Olsen anticipated a deficit of $12 million by June, 1941. Actually the deficit was $66 million."

The current fiscal budget was presented by Gov. Goodwin Knight and passed by the legislature as a balanced budget. But when Mr. Levit made his first visit here with the Governor-elect last November, the deficit expected by June 30 this year was $100 million plus. Right now, Mr. Levit says he is thinking about a $75 million plus deficit "which will be reduced below that by certain measures."

SURPLUS PLANNED

Mr. Levit is reassuring Californian businessmen that "we do not have an economic or a political crisis. The only crisis is one which will be precipitated if a sound fiscal policy is not adopted for the coming year."

Governor Brown's budget calls for $1,400 million expenditures and $1,200 million revenue from existing sources—a fiscal year deficit of $200 million. He proposes $202 million in new taxes which, with the aid of some existing funds, provides a surplus of $7 million at the end of the next fiscal year.

During the campaign, it was charged that Governor Brown's program would bankrupt the State. His program as submitted to the legislature calls for expenditures of less than $2 million. Mr. Levit calls the present budget a tight, tough budget.

Governor Brown's Business Advisory Council is also being told about his proposal for an Economic Development Agency which has been drafted into a bill now before the legislature.

This new agency would become important as a clearinghouse where decision makers from out of the State can go to obtain complete and unbiased information about all of California. It would serve as an important one-stop, fact-finding agency for busy executives who have come to study possible investment and development in California.

BUSINESS LOSS WEIGHED

Prior to the recent recession, California lost 40,000 existing enterprises in 1 year which shut their doors for good. Governor Brown says, "We do not know exactly why this happened or what the State might have been able to do about it. Without adequate diagnosis of the cause of such a huge economic death rate, we cannot possibly develop preventive measures."

Governor Brown feels California must have an agency with enough authority, scope, and financial backing to fill these important gaps in business information. "Every other State in the Union but one has seen the wisdom of the united effort," says Governor Brown. He points out that in the past, many investors came to California, looked around, were confused by the data which came from over 20 separate agencies, and left.

Governor Brown says the proposed Economic Development Agency "can point up many opportunities here in California where we can help ourselves."

## Wall Street Paper Riddles Smear of "Soapy" Williams

EXTENSION OF REMARKS

OF

## HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 26, 1959*

Mr. RHODES of Pennsylvania. Mr. Speaker, Michigan is not the only State with financial problems. Pennsylvania and other industrial States are also in

distress along with hundreds of thousands of jobless workers.

The Republican press has been trying to confuse the public by blaming State governments for economic and financial distress brought on by the Eisenhower administration's hard money and curtailment policies.

Neither administration fiscal and economic policies, nor the immorality and intellectual dishonesty of the press can end this growing crisis.

Under leave to extend my remarks, Mr. Speaker, I include an article from Labor, official publication of the railway labor unions:

FACTS ABOUT STATE TAXES: WALL STREET PAPER RIDDLES SMEAR OF "SOAPY" WILLIAMS

Because Gov. G. Mennen "Soapy" Williams, of Michigan, smashed a reactionary State political machine and has repeatedly been reelected as a Democrat, he has been made the target for a vast nationwide propaganda campaign, picturing him as a spender who has brought the great State of Michigan to the brink of financial ruin.

That theme was played up last week in a series of articles in the Scripps-Howard newspapers. So did the magazine U.S. News & World Report, as well as other publications and GOP political figures.

A different picture is presented, however, in the Wall Street Journal, a conservative business newspaper, but one which usually goes in for facts instead of propaganda.

The article points out that Michigan is far from the only State facing such troubles. "Most States," it says, "are in financial straits and before the year is out all but two or three of the State legislatures will have wrestled with tax and spending problems."

ON-THE-SPOT REPORTS

To get a clear picture of the reasons for this nationwide situation, the Wall Street paper sent its reporters to interview State government officials, key legislators and spokesmen for private groups in five States—California, Massachusetts, Michigan, Pennsylvania, and Washington.

These knowledgeable persons, the Journal reports, generally agreed on a combination of factors as the sources of their States' money troubles, among them these:

1. "The sharp postwar rise in population and its concentration in metropolitan areas has spurred demand for expanded public services, especially in education and public welfare."

2. "Because capital construction was deferred during World War II, the States in recent years have had to pump large amounts of money into working off a backlog of projects ranging from highways and State office buildings to mental hospitals."

RISING COSTS

3. "The rising cost of goods and services purchased by State governments, plus the rising interest on State debts, have put increasing pressure on budgets."

4. "The 1957–58 recession slowed the rise in States tax revenues while at the same time increasing spending on welfare programs and projects calculated to ease the impact of high unemployment."

After telling how these causes have affected some other States the article explains why their impact has been felt particularly in "highly industrialized Michigan."

"Some argue that Michigan has been too much of a welfare State during the past 10 years," the Journal says, but "spokesmen for the Governor Williams administration point out that it has been Republican-controlled legislatures that have enacted all spending measures. They say it's silly to talk about Williams, and Reuther of the United Automobile Workers spending the money, in view of the fact that the legislature went along with 99 percent of the Governor's recommendations."

RECESSION A MAJOR CAUSE

The article quotes Republican Frank D. Beadle, State senate majority leader as saying: "The biggest reason for Michigan's financial crisis is the business recession."

The Wall Street paper tells much more about the reasons for the financial troubles of Michigan and other States, but one general fact seems to stand out. On one side of the controversy are reactionaries who would rather let jobless workers and other needy people in any State starve rather than spend welfare money. Conspicuous on the opposing side is "Soapy" Williams. That's why he is the main target of the present propaganda.

## DAV Services in South Dakota and Elsewhere

EXTENSION OF REMARKS
OF
## HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

*Thursday, March 26, 1959*

Mr. CASE of South Dakota. Mr. President, an exceptional record of vital rehabilitation services freely extended to thousands of South Dakota citizens has recently come to my attention. Since I think these splendid humanitarian services may not be fully appreciated by all who have benefited thereby, directly and indirectly, I ask unanimous consent to have printed in the Appendix of the RECORD a statement regarding DAV services in South Dakota and elsewhere.

There being no obection, the statement was ordered to be printed in the RECORD, as follows:

DAV LIMITED TO DISABLED VETERANS

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in South Dakota, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, I am informed that the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization of full-time, trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. These service officers have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

SOUTH DAKOTA CENTER AT SIOUX FALLS

The DAV national service officer in South Dakota is Mr. Eldo Swenson located at the VA Center, Sioux Falls. The department commander is Mr. Vernon R. Pierce, 504 South Fifth Avenue, Sioux Falls, and the department adjutant is Mr. Donald A. Caldwell, 1614 South Prairie, Sioux Falls.

Four VA hospitals are located in South Dakota: 720-bed neuropsychiatric hospital at Fort Meade; a 255-bed general medical hospital at Hot Springs; a 548-bed DOM hospital at Hot Springs, and a 270-bed general medical hospital at Sioux Falls. There is also a State Soldiers and Sailors Home at Hot Springs, which had an enrollment of 213 last year, where the DAV State department provides various services by reason of its annual State VAVS appropriation of $900.

During the last fiscal year, the VA paid out $27,326,000 for its veteran program in South Dakota, including $4,635,719 disability compensation to its 6,184 service disabled veterans. These Federal expenditures in South Dakota furnish substantial purchasing power in all communities.

The outstanding record of personalized service activities and accomplishments of the DAV National Service Officer in behalf of South Dakota veterans and dependents during the last 10 fiscal years, is revealed by the following statistics which have been supplied me:

| | |
|---|---|
| Claimants contacted (estimated) | 6,139 |
| Claim folders reviewed | 5,116 |
| Appearances before rating boards | 1,319 |
| Compensation increases obtained | 694 |
| Service connections obtained | 342 |
| Nonservice pensions | 196 |
| Death benefits obtained | 101 |
| Total monetary benefits obtained, $261,568.65 | |

These above figures do not include the accomplishments of other national service officers on duty in the Central Office of the Veterans' Administration, handling appeals and reviews, or in its three District Offices, handling death and insurance cases.

Over the last 10 years, they reported 83,611 claims handled in such District Offices, resulting in monetary benefits of $20,850,335.32, and in the Central Office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for South Dakota veterans, their dependents and their survivors.

SERVICE BEYOND THE FIGURES

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice has been furnished, I am told, to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation, or pension, VA guaranty loans for homes, farms and business, and so forth.

Helpful advice was also given as to counseling and placement into suitable useful employment (to utilize their remaining abilities), civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim I know from our own work in this field, presents different problems. Few Americans fully realize that governmental benefits are not automatically

awarded to disabled veterans. They are not given on a silver platter.

Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A Claims and Rating Board obviously cannot grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

Good service officers advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings.

No proper service officer will ever use his skill, except in behalf of worthy claimants, with claims where there is substantial evidence of merit which should be evaluated.

The VA has denied more claims than it has allowed—many times because claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their power of attorney to some qualified advocate.

CLAIMS ARE REVIEWED AT TIMES

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year.

About three-tenths percent of such discontinuances and reductions have probably occurred as to disabled veterans in South Dakota, with a consequent loss of about $84,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed.

I suggest that disabled veterans in South Dakota who have such experience give their power of attorney to the National Service Officer of the DAV, or of some other veteran organization, or of the American Red Cross.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

HOW THE WORK IS FINANCED

I am told that the DAV receives no Government subsidy whatsoever. It maintains its nationwide staff of service officers primarily through income from membership dues collected by its local chapters and from the net income on its Idento Tag (miniature automobile license tags) project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment.

Incidentally, without checking as to whether they had previously sent in a donation, I am told that more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento Tag department, 1,753 of whom, during the last 8 years, were South Dakota residents.

Every eligible veteran can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis.

During the last 10 years, the DAV has also been helped by a separately incorporated trustee, the DAV Service Foundation, which has provided $3,300,000, exclusively for salaries to its national service officers. However, the reserves of the DAV Service Foundation are nearly exhausted. They have come from direct donations, designations in insurance policies, bequests in wills, assignments of stock and bonds, and the establishing of special types of trust funds by thoughtful and thankful Americans.

Those who are interested may send their donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member—an excellent precedent for all other States.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—churches, labor unions, trade associations, and various religious, fraternal, and civic associations. I hope that all of America's eligible veterans become members of one or more of our patriotic, service-giving veteran organizations.

---

## Action Needed To Save Alaska's Fishery

EXTENSION OF REMARKS

OF

## HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 23, 1959*

Mr. PELLY. Mr. Speaker, the following bulletin was issued by the sales manager of a fish company under date of March 19, 1959. As to the need of conservation of Alaska-spawned salmon on the high seas, it is self-explanatory:

BRISTOL BAY CLOSED FOR 1959

While this writer was sweating over his typewriter composing the bulletin in which the 1959 closure of Bristol Bay was indicated as possible, Secretary Seaton of the Department of Interior was asking the Department of Fisheries to draft a closing order. This is a direct result of the action of the Japanese Government in licensing and encouraging its fishermen to conduct unrestricted fishing operations on the high seas where both mature and immature salmon destined for Bristol Bay streams are congregated. Let us take a look at some of the economic aspects of the situation.

Prior to 1953, when the Japanese high seas fishing fleet expanded its encroachment on the Bristol Bay red salmon resource, about 4,000 American fishermen and allied workers were engaged in Bristol Bay each season, many of whom were native and white residents of the area. After the Japanese increased their catch of American spawned salmon the U.S. Government restricted the catch by American fishermen in a futile effort to prevent the depletion of the resource. Even under the curtailed operation of 1958 over 2,000 Americans were engaged in the Bristol Bay fishery. There will be none in 1959.

Should it be necessary for our Government to put these economically displaced Americans on the dole so that a similar number of jobs may be provided for Japanese fishermen and workmen?

Prior to the Japanese entry into the North Pacific the 10-year average canned salmon pack of western Alaska was 917,880 full cases, which at today's market would be worth $30 million. The 1958 pack was 433,121 full cases. The 1959 pack will be zero.

Should it be necessary for the United States to give up a potential gross product, which, under proper conservation would average $30 million annually, and American packers abandon investments totaling $20 million in plant and equipment, to provide a profitable high seas salmon fishery for Japanese packers?

Since the passage of the White Act in 1923, which created the Bureau of Fisheries, the U.S. Government has spent millions of dollars of Americans' tax money for regulation, research and conservation of the fisheries of Alaska. The canned salmon industry has spent hundreds of thousands of dollars of its own for research in Alaska.

Have these millions of American dollars been spent, and regulations to promote conservation enforced, so that Japanese fishermen can now harvest the crop?

In 1957 the Japanese high seas catch of red salmon was 19,822,254 fish. This produced 1,061,307 full cases. Because of the high percentage of immature fish it took an average of 19.6 fish per case. Had this catch been permitted to mature it would have produced 1,651,880 full cases.

Is this loss of 590,573 full cases of red salmon, worth on today's market more than $20 million, justifiable in order to give Japanese fishermen a crack at these stocks before American fishermen are permitted to fish them?

The f.o.b. Yokohama value of the Japanese high seas pack in 1958 was about $37 million. It is conceded that probably not over $20 million of this pack was obtained from fish caught in the area where American scientists maintain American spawned salmon congregate to mature.

Should $30 million of American production and $20 million of American facilities be wiped out to provide the Japanese economy with foreign exchange of 20 million American dollars or its equivalent in pounds sterling?

Since World War II the Japanese have expanded their fisheries at a tremendous rate, and their fleets will today be found operating in almost every spot where there is salt water. With that we have no quarrel, as the tuna, sardines, whales, and species other than

salmon and halibut are not under national or international conservation programs, and are not bred or spawned in any waters to which any nation can lay sole claim.

Is the take of American spawned solmon by the Japanese such a terrifically important portion of their entire fisheries that their government cannot see fit to give it up in order to preserve amicable relations?

It has seemed to the members of the canned salmon industry, and indeed the allied industries, grocery trade and consumers that our State Department has been fearful of talking straight from the shoulder to the Japanese Government about this matter lest they create ill will on the part of the Japanese, or throw them into the Russian orbit.

Is our status with our friends among the free nations such that we cannot settle a matter such as this, small as it is in the whole economy of the two nations, on a basis that would carry out the spirit and intent of the international convention for high seas fisheries of the North Pacific Ocean? The Japanese action is in flagrant violation of that spirit and intent.

The foregoing questions should be asked of your Senators and Representatives, as well as the State Department. Legislation has been introduced in Congress by Senator MAGNUSON, JACKSON, BARTLETT, and GRUENING, and Congressmen PELLY and RIVERS which would bar the importation of canned fishery products caught in places and by means denied to American fishermen. It is hoped that Congress will act favorably on these bills.

Will this problem be settled before it creates a chain reaction which would work to the detriment of imports of other Japanese goods? We recall the refusal of American longshoremen to unload Russian canned crabmeat almost a decade ago. It is hoped that a similar situation will not arise in connection with imports from a friendly nation.

---

## Report on France: A Time of Waiting

EXTENSION OF REMARKS
OF
### HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 24, 1959*

Mr. THOMPSON of New Jersey. Mr. Speaker, I include here for the information of my colleagues a splendid report on France by John B. Oakes, a member of the editorial board of the New York Times. This article appeared in the New York Times on Sunday, March 22, 1959:

REPORT ON FRANCE: A TIME OF WAITING

(By John B. Oakes)

PARIS.—As the winter of the first year of the Fifth Republic draws to its close, the tide of ecstatic popular enthusiasm that swept Gen. Charles de Gaulle into a position of extraordinary power in France has begun to ebb.

The wave of national hopes and expectations that reached its crest at the turn of the year with De Gaulle's formal accession to the presidency had been building up for months—ever since the bloodless revolution of last May 13 that brought De Gaulle to power—and the climax came that day in early January when a tall, solemn general in olive drab, beside René Coty, a tiny figure in a frock coat, rode slowly up the Champs-Elysées to the Arc de Triomphe, and then rode down again standing alone, symbol of all the longings and the glory of a France unchanging and yet reborn.

As the heavy fogs of winter give way to the warm sunshine of an early spring, the people of France have begun to feel the effects of economic decisions of the De Gaulle Government in the form of high prices and stiffer taxes, coupled with the continuance of a moderate but bothersome recession. As the Algerian war has proceeded drearily on its way without interruption or evidence of near solution, the national psychology has subtly altered. General de Gaulle has almost as much prestige with the masses of Frenchmen as ever—his recent tour to the southwest clearly indicates this is so—but there is a difference all the same. The dazzling light of hope and even of fantasy that bemused the country a few months ago has given way to a more sober appraisal of the future. The municipal elections that have just been held reflect this change, marked by an upsurge of Comunist strength in the larger cities.

Hope is still strong; expectation is still strong; De Gaulle—in whom all the hopes and expectations of France are centered—is still strong; but the atmosphere now can best be described as one of caution, of watchful waiting, of all the meaning that can be wrapped up in that inexpressibly expressive word "attente."

In one sense, France has undergone a revolution. Its flabby, divisive parliamentary system has given way to an executive-type government—some Frenchmen irreverently call it monarchical—that has stability and, what is more, a will to govern. As one Cabinet minister said to the writer a few days ago: "The principal difference is that, when my predecessors made plans or promises for a year or two in advance, everyone—including themselves—knew they probably would not be here to carry them out; but I'm here for 5 years—or at least have a normal expectation of being here that long—and my subordinates and associates act accordingly."

Or, to put it another way, in the words of an important foreign diplomat: "This Government may be causing us all sorts of difficulties that previous French Governments wouldn't have dreamed of—but it's well worth while because at last we're dealing with a Government that says what it means and has the ability and stability to mean what it says."

In another sense, the depth of the revolution may well be questioned. A revolution implies a complete overturn, a cutting off from the past, a substitution, perhaps, of one set of problems for another, but a substitution nonetheless. And yet the two major problems of France before De Gaulle are France's two major problems today; and, as a moderate labor leader bitterly observed, the extremes of right and left are, as usual, waiting in the wings.

The two major problems, of course, are economics and Algeria, in reverse order of importance. Possibly they are on the way to being settled; but if so their solution is at least not yet clear. And all France is waiting.

The economic experts tell us that we will know by early summer whether Finance Minister Pinay's program of austerity is going to be a success. There is already much evidence that it may be. Prices have risen, but the important thing is that there has been no panic rise, and many experts believe that if prices do continue to go up beyond the moderate increases that have already taken place (moderate, that is, with some special exceptions) the rise will not be precipitous, and will still leave a satisfactory margin in comparison to the 17-percent drop in the value of the franc. If things work out this way, it will be the first time in a generation or more that a French devaluation will have come off successfully.

Capital has been returning since the first of the year; unemployment is minimal, but overtime, on which many workers depended to make up the difference between subsistence and something better, has been drastically curtailed. Housing, though still abysmally inadequate, is increasing—and the visitor to France who was accustomed before the war to an almost total absence of building activity is struck by the extraordinary amount of construction now going on in Paris and elsewhere—though much of it is for business or luxury purposes, and not yet nearly enough is for low-income groups.

There are grumblings everywhere about taxes, about curtailment of certain pensions or other subventions, about a thousand and one economic moves that no previous French Government would ever have had the courage to make, or could have survived if it had made. But the basic economic questions of improving production, of indoctrinating ingrown manufacturers with the necessity of export, of maintaining balance of payments, of holding prices and costs, of sharpening competition, of continuing the steady rise in the standard of living, of ensuring full employment, of simplifying distribution—these are questions about which there is plenty of optimism but as yet certainly no assurance. In the sense that they are watching to see what the effect of Pinay's measures will be by May, by June, by July—French businessmen are waiting.

Despite all the complaints about failure of wage increases to keep up with prices, and about reduction in certain social security benefits, there have been virtually no strikes. One of the most important Communist labor leaders in France told the writer that the strikes will come. He also claimed that in almost half the departments of provincial France (in contrast to Paris) the non-Communist labor unions were uniting with the Communists in their protests against the new measures. Many non-Communist Frenchmen agree that the Pinay reforms do weigh proportionately more heavily on the workingman than on the wealthier classes.

Just how much austerity this country is in for is a matter of dispute but, in view of the free and easy way in which France as a nation has been living these past few years, some serious belt-tightening is inevitable. Can the French take it? These imaginative, intelligent, individualistic people are far more noted for their facility in getting around or out of a tight situation than for their willingness grimly to accept it, as the English do. Will then they now submit to whatever peacetime austerity is implied in Pinay's economic philosophy?

One American banker who has lived here many years said he doubted that they will—they never have before. If he is right, wages and prices will rise unduly, taxes will be evaded, imports will continue to exceed exports—in other words, things will resume their familiar norm. But for every foreigner who says they can't take it, you can find a dozen Frenchmen who, while perhaps disagreeing with the measures as such, say they can. They add: "This is our last chance; we have to make it work."

The municipal elections indicate a rise of opposition and dissatisfaction in Paris and the big cities. But the strikes have not yet come—and one has the feeling that in the ranks of labor, as well as of business, this is a period of "attente."

No conversation on any serious matter in France can go on for long without mention of Algeria. To a degree that is difficult to realize unless one experiences it, Algeria is the preoccupation of this country. Not every observer would go as far as former Premier Mendès-France in believing that virtually no domestic measure can have much meaning until the Algerian question

is settled; but no observer would disagree that this is France's No. 1 problem.

So completely is this true that the French—always a somewhat megalomaniacal people—now seem less than ever concerned with the world outside their borders, whether it's Russia, Berlin, or the United States. This is understandable inasmuch as many Frenchmen in their hearts (though only a few will admit it) feel that France is no longer the great power it was, and that what it says or does on the world stage doesn't count much between the two giants: the United States of America and the U.S.S.R.

One of the most distinguished editors in France commented recently to the writer that he considered France a mere satellite of the United States, quite comparable to the Eastern European satellites of Russia, and, therefore, there wasn't much use in fretting about France's position on the great international questions of the day.

This viewpoint runs quite counter to the whole philosophy of General de Gaulle, founded on the mystique of the glory and the power of France. His approach reflects itself completely in his foreign policy, toward NATO, toward the United States and Britain, in constructing an atomic bomb at great expense for prestige purposes, and so on. But it is hard to find many people who in their souls believe in this. They believe in the General, but his insistence on the position of France as one of the world's four great powers is viewed by many logical, practical, realistic, sardonic Frenchmen with quiet usually outspoken, derision.

The intense concentration of Frenchmen in public and private life on their own affairs as distinct from those of the outside world (and in this context the common market may be considered a domestic matter) may have something to do with a great diminution in the anti-Americanism that existed so strongly a few short years back, or for that matter with the extraordinary lack of anti-Germanism that a generation ago was drunk in by little French babies with their mothers' milk.

There are other reasons, too. By constructing a Government that they can respect, de Gaulle has removed some of the frustrations of Frenchmen; they are thus much less likely to strike out blindly against ancient friend or ancient foe. The economic union of France and Germany in the common market, the political necessities of living together in a Western Europe overshadowed by constant threats from the East (now considered here more economic, social, and psychological than strictly military) have tended to make even survivors of Buchenwald or Ravensbruck look favorably on the Franco-German rapprochement that is a keystone of de Gaulle's (and Adenauer's) foreign policy.

The concept of a united Germany is not a popular one; but, then, Germany is still a long way from being united, so the question isn't much discussed. And only occasionally does an eminent writer, such as François Mauriac, remind his countrymen that there was such a thing as nazism and that they must be on their guard lest it recur.

If one of De Gaulle's personal advisers speaks of the Berlin question as one on which France would be fully prepared to go to war, this doesn't mean that the French people are deeply concerned with it. For so far as one can judge from constant conservation with men in political affairs and public life, they are not.

But Algeria—that's different. Since the war for independence began, no French Government has been able to cope with it. It is costing France a disputed number of billions of francs per annum, though relatively few actual lives of native Frenchmen. It is a running sore, though one that France probably could endure financially and militarily for a long time to come. However, whether the war can be endured psychologically and politically is quite another question.

It was irrational to have believed that De Gaulle by a wave of his hand could bring peace and a solution to the Algerian problem when he came to power, just as it was irrational to believe he could overnight solve the economic or constitutional problems of France. But somehow quite a few people did seem to believe that, and they included people who wanted diametrically opposite solutions. Many right wing extremists accepted the general with more or less enthusiasm (he was never intrinsically popular among the Europeans of north Africa) in the hope that he would bring "integration" with France; and many liberals did the same thing because they saw De Gaulle ultimately paving the way for something very much like independence.

General de Gaulle has as yet gone down neither road. He has resolutely refused to pronounce even the word "integration" and is consequently the object of bitter disappointment not only among the "ultras," who never really trusted him anyway, but also among some of his ardent supporters woh are a shade less extremist. Similarly, in the very wide body of French opinion that believes in some kind of compromise with the rebels—if something short of independence, then something more than a mere cessation of fire—there is also disappointment that De Gaulle has not moved more quickly toward negotiation than he has yet appeared to do.

The general has made some important moves—such as his recent acts of clemency—toward creating an atmosphere in which a settlement might become conceivable; and they have been moves that no other French Government could possibly have got away with.

Yet some of De Gaulle's highest advisers believe that no political solution is at present possible because of rebel intransigence, supported by the Tunisian sanctuary and foreign arms; all emphasis now is on long overdue economic and social reforms in Algeria, leaving painful political decisions to the future. The general's own pronouncements on the subject have a truly Delphic quality about them, with the result that no one really knows what his ultimate aim for Algeria is, if he himself has formulated one.

This uncertainty about Algeria is France's biggest question mark, made all the more important by the discovery and rapid development of oil deposits in the Sahara to the south, which are expected a decade hence to supply the equivalent of at least half of France's present needs. An independent Algeria, lying between the Sahara and the coast, could seriously threaten the exploitation and the security of this resource, any decision as to the future status of Algeria will be deeply affected by this new factor.

While some people sincerely argue that there is no "middle way" between complete integration of Algeria with France and complete independence, others—and General De Gaulle is distinctly believed to be in this group—think that a middle way can and must be found on the theory that, as a noted commentator observed recently, integration is absurd and independence inadmissible." Meanwhile, social reforms and economic development are going ahead; military operations are being tightened, and the extremist European groups are becoming increasingly restive.

How important these extremists are remains to be seen. One small group was outlawed by the French Government the other day—a group that had been chalking the walls of Paris with such slogans as "L'Armée au Pouvoir." Nevertheless, some observers say that General De Gaulle will necessarily become increasingly a prisoner of the Right.

Others, including one of his closest Right Wing supporters of last May, point out that an anti-De Gaulle coup is impossible because "for a 13th of May you need one man and you need the Army; we had both last time; and what would anyone have this time? Neither a man to replace De Gaulle nor the support of the Army, which is completely loyal to him." Yet already in the U.N.R., the party that dominates the National Assembly and is more Gaullist than De Gaulle, one hears rumbles of discontent and even threats of a schism.

What would happen if De Gaulle should suddenly disappear from the scene is something no one likes to contemplate. If there ever was an indispensable man in this nation of extreme—almost anarchic—individuals, De Gaulle is that man. France now is watching him, and waiting.

But patience is not a French characteristic, less now than before, for youth is in the ascendant for the first time in many years, and youth in any country is not exactly patient. The generation that governed France between the wars is now aged and retiring from the scene. The generation that was rising at the time of the First World War, and would in the natural order of things now be in the seats of power, was reduced by the casualties both of the battlefield and the birth rate. The result is that managerial positions in both Government and industry are held by men of relative youthfulness—men in their thirties and forties—probably the youngest managerial class in the world. They are waiting—with some impatience

But at the top is a man no longer young, a man of patience, power, prestige, and vast political skill. In every sense, what Charles de Gaulle needs now is time.

## Youth Rewards for Good Behavior

EXTENSION OF REMARKS

OF

### HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 20, 1959*

Mr. LINDSAY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I bring to the attention of my colleagues a letter from the managing editor of the Chelsea Clinton News, concerning the Youth of the Week contest which is being sponsored by this fine newspaper. As Miss Aulick points out in her letter, we make a grave mistake in headlining only the juvenile delinquents in our communities. The News is endeavoring to bring recognition to the children of the community who are constructive citizens:

CHELSEA CLINTON NEWS,
*New York, N.Y., March 18, 1959.*

Congressman JOHN LINDSAY,
*New York, N.Y.*

DEAR MR. LINDSAY: In this morning's New York Times I noticed an article on page 39, datelined Washington: "US Study Urged of Youth Crimes—Delinquency Experts Back 5-Year, $25 Million Bill for Community Projects."

Since I do not know where to reach any of the speakers who appeared before Congress, I am writing to you, in the hope that you can spread the message to the proper authorities.

It is my belief that the juvenile delinquency problem, which has been mounting for the past 10 years, could be solved without spending huge sums of money, but by a change in attitude.

Instead of putting hoodlums in the headlines, I am currently winding up the second annual Youth of the Week contest in the Chelsea Clinton News spotlighting boys and girls in the community who are engaged in constructive activities after school.

These youngsters do very simple things, help their mothers after school, make breakfast on Sundays, run errands, take care of their dogs, attend pottery clases, guide younger groups in YMCA activities, etc. But if you ever knew the excitement and thrill that is caused when their pictures are taken and their stories run in the paper, you would begin to understand the importance of rewards for good behavior.

Recreation leaders, parents, teachers, school principals, have all written deeply appreciative letters telling us how the contest has benefited the community. In one case, where a boy had not been outstanding in school work, he tried to live up to the public acclaim, and actually improved his marks.

In another case the school principal said to me: "You have no idea what this has meant to the * * * family. Susie's mother is probably overly ambitious for her child, and was distressed because Susie wasn't reading well and fast enough. Now that the 10-year-old has won this recognition, both mother and daughter are filled with pride, and a tense situation that existed between them has been relieved."

I will not take your time to recite the lift that has been given to all the individual children and their families, but the point is, that an example of doing good has been set before the public and we all know that human being are copy cats, and they will follow good as well as evil, if it is presented to them dramatically.

It is axiomatic that human beings desire attention. If we cannot be in the spotlight for our constructive achievements, we will gain attention of photographers, reporters, TV interviewers, public, family, police, social workers, by getting into trouble.

Let us stop paying so much attention to the delinquents, and let's heap praise on those who are striving to develop their talents, self-reliance, imagination, and self-discipline; who are generously devoting their time to others, and soon the juvenile delinquency problem will begin to diminish.

Dr. Earl H. Bell, professor of sociology and anthropology at Syracuse University, writing on "The Price of Leadership" in the Alumni News, winter 1958-59, said: "Another social device which pulls the individual in the socially desirable direction is the models." Let's hold up worthy models. Dr. Bell's article contains some excellent material. If you have time to get and read it, I believe you would find it stimulating.

Sincerely,

JUNE L. ADLICK,
*Managing Editor.*

---

[From the Chelsea Clinton News, Mar. 12, 1959]

ARETIE HARALABATOS, 8, AND DANIEL EDMONDS, WINNERS

Aretie Haralabatos, 8-year-old daughter of Mr. and Mrs. Thomas Haralabatos of 373 Eighth Avenue, received $25 in prizes for winning the "Youth of the Week" contest, and Daniel Joseph Edmonds, 11½-year-old son of Mrs. William Noesges, 433 West 24th St., was the runnerup.

Aretie, whose name derives from an ancient Greek legend and means "Good Girl," is in the third grade at the Chelsea Greek American School of St. Eleftherios Church, 357 West 24th Street.

This is her winning entry, written in her own, very legible handwriting: "When I come home from school and do all my homework I help my mother and grandmother. Saturday morning I go to Hudson Guild's happy time and afternoon for piano lessons. On Sunday I go to Sunday School and then to church."

Aretie, an alert young lady with snapping brown eyes, has a brother, James, who is 12, and a sister, Georgia, 7. Their father works at the Hallas Food Market, which is owned by their grandfather. Aretie cooks at the Happy Time Club. She wants to be a schoolteacher when she grows up.

DANIEL EDMONDS

Daniel Edmonds who is in the fifth grade at Guardian Angel School is a grandson of the late Daniel J. Hennessey, who was prominent in Chelsea political circles. The handsome lad plans to become a priest. He served his first mass in February and became an altar boy last year. Soon he expects to become a Little Leaguer.

His entry, submitted by his mother, follows:

He can cook, sweep, is one of six. Always helping in the house, church, school, goes to get wash and all stores. Helps with younger brother Billy's (7½ years) lessons, as well as take Mike 2½ out. Keith the 6-year-old always needing something fixed goes to Danny. He helps with the baby 10 weeks, John Scott. All the neighbors like and think highly of him. He even looks out for his sister Violet 12½ years. He's a real boy in the Scouts, Knights of Altar, and ball team.

## Cause of Inflation

EXTENSION OF REMARKS
OF
## HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Peoria Journal Star of March 24, 1950:

CAUSE OF INFLATION

The wage-cost spiral is being discussed throughout the country as if it were the basic cause of all our dollar grief, and specifically of inflation. But if we take this view, we will be dealing with a symptom and not with the real cause.

The situation is far too serious to go howling off blaming it on wages and overlooking the real culprit.

It is true that if wages go up, prices go up as much or more, unless there is an offsetting gain in productivity. And when prices go up, not only do wages go down in reality, but down also goes the value of savings, life insurance proceeds, and the pension values we look forward to, comes age 65. Dollar depreciation or dollar erosion has destroyed or stolen billions upon billions of dollars from people's savings during the past 20 years, and this destruction will go on as long as we subscribe to the fallacy of getting something for nothing by wanting more for the same thing.

A wage earner who seriously listens to a politician or anybody else on the promise of a higher standard of living through more wages, without corresponding increases in productivity, is preparing to have his eyeteeth stolen.

All this is true—but it does not make wages the great bugaboo that causes inflation.

The basic cause of inflation and dollar erosion is the creation and abuse of excessive money supply. This comes through the mechanism of the Nation's bank.

We know as individuals we cannot lend something we don't have. If we don't have a dollar, we can't lend it to Uncle Joe. But a bank can and does do this very thing. If Uncle Joe wants a dollar and the bank has already loaned all it has, it can take Uncle Joe's note and, after receiving the note, set up a credit in Uncle Joe's account in like amount. This creates an increase in money supply. When Uncle Joe pays off, the supply is decreased.

When our Government runs a deficit, some or all of this is financed through the banks, just as with Uncle Joe. The bank takes the Government's I.O.U. and credits the Government account. The Government spends the money, increasing the money supply which goes into the market bidding against the wages of those who produced the goods—and prices go up.

When prices go up for the individual, they also go up for the Government, and then come higher taxes or more deficits, and we are off on another spiral. There are some sharp-witted people who profit through this, but all the rest of us lose, and will continue to lose just as long as we are a party to the deception that a higher wage, through a dishonest fiscal policy, can give us a higher standard of living.

We are clearly in a mess, and the sooner enough people realize it and force the Government and others to face realities and practice common honesty—the more longrun grief we will be spared.

## America's Peerless Woman

EXTENSION OF REMARKS
OF
## HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. REES of Kansas. Mr. Speaker, under permission approved by the House, I am including a statement delivered by Bishop Wilbur E. Hammaker on February 17, 1959, at the statue of Frances Willard in Statuary Hall in the U.S. Capitol. Bishop Hammaker fittingly describes Miss Willard as "America's Peerless Woman":

"America's Peerless Woman." That's a rather daring subject. It amounts to a generalization. And, as you know, generalizations are dangerous. As a rule, I avoid them. It is risky to take in too much territory. But if I had to, I believe I could defend and support this one. Can you think of any other American woman who died before the coming of this century who is so widely and well known as Frances Willard? Not even Harriet Beecher Stowe. Frances Willard stands alone in the sweep of continuing influence.

Or can you think of any woman of standing since the year 1900 who approaches the high place she holds? You would not say, or would you say, Mrs. Eleanor Roosevelt? I would not; though she seems to be the most influential woman of recent years. Sixty years hence her name shall, doubtless, have grown dim. It really is an achievement for an individual, any individual, to influence widely and deeply one generation. Not many do. Of those who attain such eminence their powers wane rapidly in the succeeding generation. Who remembers clearly even the Presidents of her era? There's Grant—but he was a soldier rather than a statesmanly President. There's Hayes—but his name has luster because he was Lucy's husband. There's Garfield and Cleveland and Harrison—but which of them is clearly remembered and reverently looked up to as a leader and guide? And there's also Arthur who name flits into my memory at this moment. I had overlocked him in my mental

listing of the Presidents who came in in the 19th century after Lincoln. They've all had their little day.

REMEMBERED BIRTHDAYS

But her's goes on. Like John Brown's body, it is still marching on. Only a few birthdays are remembered, whether they be day of birth into earthly or heavenly life. Let's think for a moment. There's Christ's and Washington's and Lincoln's. And there's Frances Willard's birthday—her birth into a land the light whereof is the radiance of Christ's face. Do you know of the birthday of any other American—man or woman—so widely observed in this land of ours? Thousands of groups shall be thinking of her this 17th day of February even as are we. February is God's littlest month—yet He must greatly love it, else He would not have placed in its embrace three such blessed birthdays. Washington's, Lincoln's, Willard's.

Any careful study of the lives of Abraham Lincoln and Frances Willard reveals their close spiritual kinship. In very many ways they looked at life alike. Their profoundest motivations and concerns were as much alike as two peas out of the same pod. To each of them, man—just man—man, any man, anywhere, was the handiwork of the Almighty and as such more precious than gold. But the peerless woman—what about it? What evidences? Real tangible evidential facts? Well, in the first place there's younger statue. Are there statues of other women in this national shrine? I see none. Do you?

Now, go with me to University Heights in New York City. Let us wend our way to the Hall of Fame. In it we see many busts—busts of famous Americans. Is one of them that of a woman? Yes, one woman. What's her name? Frances Elizabeth Willard. Shall we go on up to Boston while we are traveling northward? Let's go out to Boston University—a school with more than 25,000 students.

On that campus, we shall find the beautiful Marsh Chapel. In it are 16 chief windows. In each of these is a full length picture of a religious leader, whose influence abides. Who are they? Let me give you the list: Abraham, Moses, Elijah, Isaiah, John Baptist, Peter, Paul, John, Athanasius, Augustine, Francis of Assisi, Luther, Wesley, Francis Asbury, Abraham Lincoln, Frances E. Willard. In the entire group only two American born. Asbury, the founder of American Methodism, was an Englishman who gave his life to this country. Abraham Lincoln and Frances Willard, the only natives of the land of the free and the home of the brave.

LINCOLN AND MISS WILLARD

Is it not a strange, coincidental buttress for my belief in their likeness of purpose and soul? Both of them, too, breathed in their early years the air of prairie lands—one Illinois and the other Wisconsin. Strange, ah strange, the twain were in maturer years tied up integrally with Illinois. Miss Willard used to say: "I am first a Christian, then I am a Saxon, then I am an American, and when I get home to Heaven, I expect to register in from Evanston, Ill." Speaking of getting to Heaven reminds me of a query of Dr. Newell Dwight Hillis in his memorial address in Plymouth Church, Brooklyn, on the Sunday after she went home. His words were: "The death of what citizen since Lincoln's has called forth a thousand memorial funeral services upon the afternoon of I day?" Implied answer, "None." In that same address the eloquent Dr. Hillis—Henry Ward Beecher's successor in the pulpit of Plymouth Church, said: "For years she was misunderstood; oft she was cruelly criticized, even despised by many, and scorned. But at last she has fulfilled her career. She is now with Augusta Stanley and Florence Nightingale, with Mary Lyon and Lucretia Mott, and Harriet Beecher Stowe. She is with Luther and Livingston and Lincoln; she has met Garrison and John Brown and Wendell Phillips. Kindred spirits all. Having met them and received their approval, what cares she for our praise? It is of supreme importance to us and our children that Frances Willard and her Lord should think well of us. Whom God hath crowned, let us remember."

HER POWER AND HER RESTRAINT

On one occasion, an old toper, who was a great and eloquent lawyer, when he was asked if Miss Willard was a very large woman said, in describing her speech of the night before: "I should think her, judging from the impact of her message, to be about 8 feet high and weighing about 400 pounds; but when she was wooing my heart to a better life, I thought then and think now, that she was the sweetest little being in the world." Her voice had the harmonious swell, the excellent flexibility, the varied richness in putting across her keenly reasoned truth, that made her capable at all times of touching into rich response almost every string in human nature. In Baltimore, one of the greatest college presidents of the day, who had made a comprehensive and scholarly study of the forces of eloquence, heard her for an hour and a half and said at the close of her address: "The cause which she represents touches every interest of the human soul and body, and she has applied its persuasive appeal to every quality and concern of my personality. She is a queen, a master on the platform."

Henry Ward Beecher, a wizard with words and their intellectual and emotional impact, used to tell this story to the great Dr. Frank Gunsaulus, almost every time they met. "She spoke," said Beecher, "a number of times in my pulpit. Talking to my people whose thinking I had directed and moulded for many years, she so completely captivated and captured them that one of my warmest admirers said to another fellow-admirer: 'She has beaten the old man on his own ground and at the one job he has been at with unsurpassed skill and success for decades of years.' "

The tenderness of Miss Willard's nature, her home-loving disposition, her deep love of humanity, her concern for folks—just folks of all kinds and conditions—might have led her into sheer sentimentalism, if the cause for which she labored had not laid tribute upon her intellectual strength and spiritual completeness. "Did she cry much?" a cynical critic asked of his young son, a Harvard student who had gone to hear her in Boston. "No," answered the young man. "She did not cry any more about the woes of those who suffer from intemperance than Emerson would have done; no, she did not cry, but I cried and all the audience with me; and you would have cried at the things she talked about, if you had been there; and you would have cried just because she did not cry."

Commenting on her restraint and her mastery of her own emotions, Wendell Phillips said one day: "One feels as she talks that there are fountains of tears behind Miss Willard's speech. How she keeps them from streaming down her cheeks is a mystery. Not many men could. And she is one of the weaker vessels we are told," concluded the old man with a chuckle. Another day Phillips said: "Our indignation (in the cause of the black man) was of a pretty sound quality and profoundly moral, but hers is the faith of the Lord God Almighty in its fullness. She is very restless under wrong but she can wait. It is a great faith that wonderful woman has."

HER BASIC BELIEFS

Fronting that other shore shortly before her "sunset and evening star," she wrote out her last Confession of Faith. Among many priceless sentences, I have picked out a few. She writes, and I quote: "Concerning the Gospel of Christ, I retain to this hour the teaching of my father and mother, illuminated and enforced by their high character and noble lives. The chapter in my autobiography entitled 'God and My Heart,' is as complete a presentation of what I would like to be remembered by any who care for me as I have ever given. My great love for the natural sciences, acceptance of evolution as a working hypothesis of the universe, and my favorable view of Biblical criticism, do not disturb me in my early faith. I consider that men have mingled their opinions with God's truth, have so incrusted the temple of Christ's Gospel that it shall take generations to restore it to its pristine purity and simplicity. It seems to me that this age is one that should have sounded in its ears, more potently than any other voice, that splendid declaration, 'In vain do they worship me, teaching for commandments the doctrines of men'; and this: 'Why call ye me Lord, Lord and do not the things which I say?' To me there are five great words: God, duty, love, humanity, immortality."

She goes on: "I believe in the reign of the common people; that the earth is theirs, and everything in it belongs to them; that the Kingdom of God is going to be here."

My soul, whose confession of faith is this? Is it that of Frances E. Willard or of Abraham Lincoln? Is it not hauntingly reminiscent of Gettysburg and the first inaugural and especially of the second inaugural? In very many respects she and Lincoln are twin majesties of the America of the latter half of the 19th century. Let us drink deeply of the streams that still flow out of the fountains of their minds and hearts. She often said: "When I pass onward to the world invisible, please do not say 'She is dead,' but rather remember that I have entered upon the activities that are not succeeded by weariness." From the battlements of Heaven, she is even yet waving us to unceasing struggle for men and against the evil one, saying those well-remembered words: "Protect the home. Hold the light up higher, higher. 'Help your fallen brother rise, while the days are going by.' "

ACROSS THE DIVIDE

The gifted poetess, Mary Lowe Dickinson, at the time of Frances Willard's translation from the ranks of the Army militant to that of the Army triumphant, wrote: "At the Columbian Exposition 5 years ago I said, 'Under her guidance they made a union, and that was great. They made a temperance union and that was greater. They made a Woman's Temperance Union and that was greatest. But they made a Woman's Christian Temperance Union and that fact made the greatness of all the rest.' "

It was that Mary Lowe Dickinson who wrote a lovely poem of which, as my concluding word, I bring the first paragraph:

"Sleep well, brave heart! Beloved of Christ and crowned,
God gives thee sleep.
The wide world's love enwraps thy slumber round;
God gives thee sleep.
His angels smile, His stricken children weep,
Yet smiles nor tears shall break thy blessed sleep."

## Veterans' Administration Hospital Costs

EXTENSION OF REMARKS

OF

## HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 26, 1959*

Mrs. ROGERS of Massachusetts. I am gathering information to show why there has been a yearly increase in the cost of operation in the Veterans' Ad-

ministration hospitals. I find that the Veterans' Administration has a better record in the cost of operation than civilian hospitals.

The Veterans' Administration hospitals' cost of operation last year is 5 percent more, compared to 8.8 percent for civilian hospitals. The Veterans' Administration tells me that the increased cost of operation is due somewhat to the new hospital buildings, which require more personnel to run due to the fact of modern treatments and new modern medicines.

When Congress reconvenes I will give to the Congress a more detailed account.

## How Soft Are We?

EXTENSION OF REMARKS
OF
### HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. RAY. Mr. Speaker, the two editorials which follow appeared in recent issues of the New York Daily News. Each is pertinent to matters which have been and will be before the House at this session:

GUEST EDITORIAL

Said Interior Secretary Fred A. Seaton, in the course of a Tuesday night address to Long Island University alumni:

"In this time of rising prosperity and comparative world peace, we should be determined to pay the price ourselves for any program we decide is necessary, and not charge it—plus interest—to our children. It is a shabby thing to toss a mortgage into the baby's bassinet."

HOW SOFT ARE WE?

Vice Adm. Hyman G. Rickover, father of the nuclear submarine and a hard-headed American, reeled off some advice last week which deserves more comment than it got at the time.

Said the admiral: Our vaunted American style of living may be a product more of our luck than our brains—our very best break came when early American colonists were able to grab some fine real estate from the Indians—our proud technologists have invented quite a few things, but through the years we've also borrowed or stolen a lot of basic research from equally smart Europeans.

The Admiral's reason for all this deflating talk was simply that he's afraid we're getting smug and soft. Too many of us, he feels, especially our youth, are convinced that our high living standards will just stay with us somehow, without our having to do much working or worrying. Some of us also believe that the high-type food we eat and the shiny gadgets we so love guarantee that we'll always be the world champs, both politically and militarily.

Rickover revises "champ" to "chump." He points out that in time of war some aspects of our high living standards might even prove to be liabilities. For instance, millions of us live in the suburbs, miles from our places of work. Private automobiles now roll us to the job—but what would the industrial situation be if war cut off the sedans and/or the gasoline?

LUXURY CAN BACKFIRE

In Russia, Rickover points out, the Soviet bossmen don't hand their slaves much food or many labor-saving gadgets. Steel's good for Kremlin weapons. It's too valuable to be wasted on automatic dishwashers. So Russians aren't especially lighthearted, but the low standard of living forced on them has made them tough, able to shrug off hardships that might demoralize a softer people—like us, for instance.

The Admiral's prescriptions: More realism, more austerity, more honest work and less smug theorizing about being so smart as a Nation that we can't be knocked off. Mental softness can rot any country, including ours, Rickover insists. We trust the Nation wasn't too busy playing with its newest gadgets to hear that authoritative warning.

## Economic Assistance to Veterans of World War I

EXTENSION OF REMARKS
OF
### HON. WILLIAM J. RANDALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. RANDALL. Mr. Speaker, during my very short tenure here as a Representative of the Fourth Missouri District filling out the unexpired term of the late and much respected George H. Christopher, I have been the recipient of a very large volume of mail and telegrams urging the passage of H.R. 1181, a bill to pension World War I veterans. Because of the widspread interest of this measure in my home State, I thought it would be worthwhile to have embodied in the RECORD a resolution adopted by a statewide organization. This resolution will provide for the Members in Congress some of the sound and valid reasons why this bill should receive your most serious consideration; and I want my colleagues to know I feel it is imperative for the House to pass in this session, a bill to pension World War I veterans.

Mr. Speaker, the resolution as received by my office is as follows:

Whereas the forgotten old veterans of World War I, are in need of economic assistance to secure the necessities of life, and to obtain a better diet for the old veterans of World War I, who are dying at the rate of over 8,000 each month; and

Whereas an age pension to veterans of World War I, would create a cash buying power throughout the Nation to aid small businessmen; and

Whereas an age pension to veterans of World War I, would increase business throughout the Nation; give work to the unemployed and provide cash for the purchase of farm products: Therefore be it

*Resolved by the board of administraion of the Missouri Department, Veterans of World War I, United States of America, Inc., at its regular meeting, held in Jefferson City, Mo., March 7 and 8, 1959,* That the President and the Congress of the United States of America, are hereby urgently requested to grant an age pension to the forgotten old veterans of World War I, who fought to save the Nation over 40 years ago; and follow the unbroken American precedent of 183 years for war veterans age pensions.

ROY F. HAMPEL,
*Commander, Missouri Department, Veterans of World War I, U.S.A., Inc.*

FRANK J. NESSELHAUF,
*Adjutant, Missouri Department, Veterans of World War I, U.S.A., Inc.*

## Anthracite Counties Council of Veterans of Foreign Wars of Pennsylvania Urges Construction of 200-Bed Addition to the Veterans' Administration Hospital at Wilkes-Barre

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 26, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Anthracite Counties Council of the VFW, Department of Pennsylvania, urging that a 200-bed wing be added to the veterans' hospital at Wilkes-Barre. Resolution was adopted at a meeting of the council on Sunday, March 1, 1959, held at the Dupont VFW Post, No. 4909:

ANTHRACITE COUNTIES COUNCIL, VFW
RESOLUTION

Whereas the Veterans' Administration Hospital, Wilkes-Barre, Pa., servicing veterans in a 32-county area, is in dire need of an additional 200-bed wing to accommodate many veterans awaiting admission, and also an auditorium for those veterans already being hospitalized at the hospital. The wing and auditorium, as mentioned above, were contained in the original planning of the hospital, but due to a reduction in construction appropriations these services were excluded and the hospital was completed without same. Kitchen and cafeteria facilities at the hospital provide adequately for the added services that another wing and auditorium would create. These facilities were included in the original planning to cover the services of the wing and auditorium we are appealing for;

Whereas many veterans with non-service-connected ailments and disabilities require hospitalization and treatment and, by waiting a long period of time for admittance, their conditions become more aggravated. As a result the veteran, when admitted, requires more hospitalization over a longer period at the hospital, which ultimately results in having a demoralizing effect upon him. Also, in many cases, the conditions of the veteran become seriously impaired because of having to wait such a long time for admittance. It has been noted that veterans, in no position to secure hospitalization at their own expense at private or other hospitals, have applied for hospitalization at the Wilkes-Barre, Pa., VA Hospital, and died before being admitted, apparently because their conditions became more aggravated during the waiting period;

Whereas many other veterans eligible for hospitalization are so discouraged because of long delayed admission they do not officially apply for VA hospitalization;

Whereas veterans who apply for VA hospitalization in many of the distressed areas of the 32-county area, are now facing a period of crisis, both financially and economically, in order to maintain a standard of living that should be accorded to every American citizen, and are in no position financially to pay for such hospitalization in private or other hospitals;

Whereas our Government is morally obligated to render assistance to veterans in urgent need of rehabilitation through hospitalization for defending his country in time of war, other emergencies, and during peacetime for national security: Be it

*Resolved at this meeting of the Anthracite Counties Council, Veterans of Foreign Wars, comprised of the 10th and 11th Pennsylvania Districts of Luzerne, Lackawanna, and Wayne Counties, held at the Dupont VFW Post, No. 4909, on Sunday, March 1, 1959,* That this VFW council has gone on record strongly recommending that an additional 200-bed wing and also an auditorium be considered for addition to the VA hospital, Wilkes-Barre, Pa.; be it further

*Resolved,* Copy of subject resolution be directed to all U.S. Senators and Congressmen in the 32-county area, urging that they exercise their vested authority in support of this VFW council's apepal for the 200-bed wing and auditorium at the VA Hospital, Wilkes-Barre, Pa.; be it further

*Resolved,* Copy of subject resolution also be directed to all Pennsylvania VFW district commanders, which cover the 32-county area serviced by the VA hospital, Wilkes-Barre, Pa., urging that they contact their Federal legislators and unite with this council in support of the need for additional hospital services as indicated above.

William J. Lester, Commander, Anthracite Counties Council, VFW; Anthony A. Forlenza, Senior Vice Commander, Anthracite Counties Council, VFW; Najid Saadi, Junior Vice Commander, Anthracite Counties Council, VFW; Harold Ulrich, Past Commander, Anthracite Counties Council, VFW; Joseph Smereski, Past Commander, Anthracite Counties Council, VFW; Harry Wilkie, Sr., Commander, Kingston VFW Post No. 283; John R. Humphreys, Adjutant, Anthracite Counties Council, VFW; John Radko, Commander, 11th Pennsylvania District, VFW; James Gallagher, Commander, 10th Pennsylvania District, VFW; Pio Ferrario, Senior Vice Commander, District 10, Veterans of Foreign Wars; Charles Adonizio, Jr., Adjutant, 11th Pennsylvania District, VFW.

## I Speak for Democracy

EXTENSION OF REMARKS
OF
### HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 26, 1959*

Mr. FRIEDEL. Mr. Speaker, the State of Maryland had reason recently to be proud of Miss Veronica Ann Rebert, of Baltimore, as State winner in the Voice of Democracy contest, sponsored by the National Association of Broadcasters, the Electronics Industries Association, all State associations of broadcasters, and the Veterans of Foreign Wars. The Voice of Democracy contest is designed to stimulate American youth to think about the meaning of our form of Government in their own lives and to communicate their ideas to others.

I am particularly proud that a resident of the Seventh Congressional District was the winner over more than 200 other entrants in the State of Maryland. Miss Rebert is to be congratulated and the sponsors commended for the public service they are rendering to our American youth through this very worthwhile endeavor.

Under leave to extend my remarks, I would like to insert Miss Rebert's excellent composition in the CONGRESSIONAL RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Veronica Ann Rebert, senior, Seton High School, Maryland)

I speak for democracy. I am an American. I am free. Democracy is my heritage. It is my way of life, given me by my forefathers, who bravely signed the Declaration of Independence and courageously fought tyranny and oppression. In the shadow of punishment and death, they labored for the common rights of freedom, justice, and equality, to which I am entitled by God as a human being.

Here in America, I live in confidence, knowing fully that my rights and privileges are protected, and can't be taken from me—unless I, myself, abuse them. I am free to be independent, to rely on my own judgment, to develop my own theories, and to practice them. Those in authority, I have chosen, but they can't tell me what to say, what to believe, nor what to do. Equality is mine. Democracy does not demand or insist that I be equal in ability, equal in merit; but I am assured equality nevertheless, even if I fall short in comparison with others.

True, democracy does not work by itself for the responsibility of a good working Government, of any free nation, rests with every one of its citizens. As a citizen, I have the privilege to choose leaders with the ability to lead, to support programs and study records beneficial to sound government, making their soundness known, and supporting men who also believe in them, and will work for their adoption.

In my America there are no masses of rebellious people shackled as slaves to the dictates of their Government. Instead, in my America, it is the people who exercise their right and privilege to govern; their right to make laws requiring righteousness and justice for all concerning human relationships, and the good combating the evil, for all to see.

My America is a mother to the homeless and oppressed, and a peaceful haven for the troubled. Our lady, on Liberty Island, is the true symbol of democracy, the spirit of faith, the light of hope, shining a straight path to security and freedom.

Miss Liberty smiles and makes hearts flutter as she raises her beckoning light of freedom to all men. How fortunate I am to be spared the brutalities of tyranny and oppression in my country. But my good fortune is darkened by the fact that millions of people are still caught in the web of suppression.

Yes, I am an American. I am free. And with my whole body and soul I will fight the never-ending battle against pagan totalitarianism, to defend my heritage of a Christian democracy.

## The Nation's Responsibility for Its Unemployed

EXTENSION OF REMARKS
OF
### HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 26, 1959*

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I place in the RECORD my statement to the Ways and Means Committee on the subject of the Nation's responsibility for its unemployment. The statement follows:

THE NATION'S RESPONSIBILITY FOR ITS UNEMPLOYED

Mr. Chairman, not long ago the Detroit Free Press carried a picture of a 29-year-old unemployed worker—a veteran of 13 months of fighting in Korea—who was picked up by the police as a vagrant because he was searching in garbage cans for food. He informed the judge that he was not a vagrant because he had a home—a pup tent. Asked how he had managed to stay alive during Detroit's zero weather he replied that he had a big shaggy dog that slept with him to keep him warm. His problem—he was able and willing to work but he couldn't find work. And so this man who had, in defense of his country, slept in tents in the hills of Korea was now forced by circumstances beyond his control, to sleep in a tent and seek food in garbage cans in one of the great cities of the wealthiest nation in the world.

I begin my remarks with this story because I want to emphasize the point that while we deliberate and, I'm afraid, procrastinate on what to do about our unemployment insurance plan, we are compounding human misery. Let us always remember that we are talking about men and women who until they were laid off, were accustomed to providing their family with a weekly paycheck. During the subsequent weeks of discouraging job hunting they learned to squeeze an existence out of minimal income provided by unemployment insurance. When they exhausted the unemployment benefits their situation became really desperate and most of them had to fall back on the already swollen general relief rolls.

When we are told, therefore, that unemployment in this country rose to 4,749,000 in February of this year—the highest for any February since the war with the exception of 1958—let us never forget that these alarming statistics are not just ledger entries. They are concerned with our own fellow Americans. And I believe I speak here today for the 4¾ million people now out of work, for the approximately 2 million workers who will exhaust their benefits in the year ahead, and the 10 or 12 million Americans who will become unemployed for some substantial time during the year ahead.

Mr. Chairman, Congress has not come to grips with the real and permanent problems of unemployment in this country. We have known, during sunny weather, that the cracks in the roof were growing wider and deeper, and when storm clouds have appeared on the horizon we have, from time to time, stuffed a little paper into these growing gaps. But it seems to me to be abundantly clear that the facts of our time call for a whole new roof, and a temporary tarpaulin to protect us until we can build that roof.

The statesmanlike approach to this problem, in my considered opinion, is contained in two proposals now before this Congress. The first, S. 1323, the McNamara-Hart bill, provides the temporary tarpaulin in the form of Federal grants of up to 16 weeks for the approximately 2 million unemployed workers who have currently exhausted their rights to State and Federal benefit or who were never covered by unemployment insurance and are still unemployed. In addition, about 1½ million persons who exhaust their benefits in the coming year will receive payments under the bill. The second, H.R. 3547, the Karsten-Machrowicz bill, builds the kind of roof which provides genuine and equitable protection for the problems we are facing now and which will inevitably grow in the future. I firmly believe that if the Federal standards in this bill as to benefit amount and duration were now in effect, the terrible tragedy of the current recession would be significantly reduced both for the unemployed and for the entire economy. We must pass these standards this session to prepare our Federal-

State unemployment insurance system for future recessions.

We in Michigan—and in other hard hit States—are particularly interested in the reinsurance provisions of the Federal standards bill. This was one of the points made by the eight Governors who visited President Eisenhower on Monday of this week. They stated: "We favor adequate Federal advances to meet emergencies where the problems of unemployment are beyond the ability of the affected State governments." Michigan, I am afraid, fits this description. Its unemployment compensation system paid out about $324 million in benefits in 1958, while collecting only about $122 million in taxes and interest. Our State had to borrow $113 million under the Reed Act and through December 1958 it had obligated itself for another $64 million under the expiring Temporary Unemployment Compensation Act. The situation has gotten so bad that some Michigan employers have volunteered to pay their unemployment tax early so that benefit payments could be met. The Karsten-Machrowicz bill, which provides that the Federal Government will pay three-fourths of the money for benefit payments which exceed 2 percent of taxable payroll, is a reasonable way to approach the situation where an unemployment emergency has pushed a State unemployment compensation system to the wall.

If we are willing to look at the facts, it must become clear to all of us that we are not here concerned with a temporary problem which yields to the kind of passive patchwork approach which has so far prevailed. The cold fact is that although industrial production and the gross national product have improved, unemployment has increased steadily each month since last November. Some 256 major and minor labor areas are now on the critical list, with more than 6 percent of their total work force unemployed. Some 80 areas in 20 different States have, during the past 24 months, had more than 6 percent of their work force unemployed for a period of 18 months out of 24 months. My own State of Michigan, one of the Nation's leading producers of durable goods, has felt the brunt of the nationwide business recession of last year. As of February 15, Michigan had 364,000 unemployed, or 12.4 percent of the total labor force. In Detroit we have 229,000, or 15.4 percent of the total labor force unemployed.

Moreover, we have not only a problem of numbers but of depth. For, as Max Horton, director of the Michigan Employment Security Commission told the Senate Finance Committee last Friday, of the 229,000 unemployed workers in Detroit some 85,000 are "what we call hard core unemployed. In other words, they have been out of the factories so long and they have no attachment, and for that reason we feel that we have an economic disaster."

We face a situation, Mr. Chairman, which is not going to be solved by reassurances from the administration that we have nothing to worry about. There are many reasons why unemployment hangs on.

Automation is permanently eliminating many jobs in industry. On February 6 of this year the Federal Reserve Board pointed out that if the level of production in the automotive industry as of December 1958 is compared to that of December 1956, production in 1958 was only 4 percent less but the number of workers required was 20 percent less. Automation is making similar inroads in the electrical industry, in steel, and in the coal industry. We must recognize that the man who loses his job to a machine—especially if he is middle aged or over—is not going to find it easy to find another one, nor is his son going to be able to take over his father's old job.

The rate of economic expansion is too slow to provide new jobs for displaced workers or to absorb new entrants into the labor force. At the same time, the growing pool of unemployed helps to prevent wages from rising to supply needed purchasing power.

I am aware of the fact that the Governor's conference has just issued a statement to the effect that the States do not want Federal standards. But I remind the Congress that most of these States have failed to respond to the repeated exhortations of the administration that they act themselves to liberalize their own laws.

I am also aware of the fact that some of our more fortunate communities do not face the heavy problem we face in Michigan. But I have tried to indicate that our situation reflects the kind of industrial changes which are, increasingly, going to affect other communities in the land.

We face a situation which will not be solved by any source. It will not be solved by honeyed phrases. It will not be solved by conferences or councils. It must be solved by the Congress acting courageously and because we care. I believe that the measures here presented are that kind of program.

---

## Politics for Christians

EXTENSION OF REMARKS

OF

## HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 26, 1959*

Mr. DIGGS. Mr. Speaker, Easter is a season of rededication. It is Christian inventory time—a time for each of us to turn our sights inward and carefully appraise the strength of moral principles by which we would be guided in day to day relationships with our fellowman; and, as well, a time for reaffirming our faith in the body of Christian principles upon which democracy is founded and upon which it must continue to nourish if our precious heritage of freedom is to be preserved.

In his sermon Politics for Christians, the Reverend Anthony R. Perrino, Central Methodist Church, Detroit, Mich., directs our thoughts to just this kind of critical self-reexamination. Recently, the Freedom Foundation very appropriately awarded Reverend Perrino the George Washington Medal, and his sermon on Politics for Christians abundantly attests to the significant contribution he makes as a religious leader to freedom in its fundamental sense. Under unanimous consent, I would like to share that sermon with my colleagues and the numerous others who read the CONGRESSIONAL RECORD.

The sermon follows:

POLITICS FOR CHRISTIANS

(A sermon by the Reverend Anthony R. Perrino, Central Methodist Church, Detroit, Mich.)

INTRODUCTION

It is quite common these days for a politician to speak in religious terms. The wise officeseeker attends church regularly and publicly affirms his faith in God and the moral foundations of society.

It is still quite uncommon, however, for a religious leader to speak in political terms, to address political issues, to challenge or support political actions, especially from the pulpit. When he does, the preacher is thought of as a radical or a revolutionary. But what could be more appropriate?—at least for a Christian, for that is exactly what Jesus was.

When the Master stepped before his hometown congregation at Nazareth, He expressed His passionate concern for social justice:

"The Spirit of the Lord is upon me because He hath annointed me to preach good news to the poor; to proclaim release to the captives; to set at liberty those who are oppressed."

This prophetic ministry was to be fulfilled in Him, said Jesus, standing in the tradition of the Hebrew prophets and challenging His people to apply their religious faith to human relationships. He knew that religion without practical application and ethical concern is mere superstition.

Many of us preachers are like the big-game hunter who said: "The first hippo I ever shot had been dead a week."

We wax eloquent on the dead issues of the past but fail to apply Christian principles, to proclaim the relevancy of Christian ideals, boldly and prophetically, to contemporary issues now.

When the industrial revolution in its early stages was exploiting the workers, forcing even children to work long hours under miserable conditions, many of the religious leaders of the time responded to the cries for justice with the admonition: Accept your lot; it must be the will of God.

Injustice the will of God? No wonder that religion was called "the opiate of the people."

But this was not the religion of Jesus, not in its truest form. Christianity at its best is a revolutionary force—like her Master—challenging injustice, reforming human relationships, transforming all life in the direction of the Kingdom of God.

Today I would like to lift up three basic Christian principles, three fundamental Christian ideals, which are not only relevant to the social and political issues of our time but must be applied and expressed to the world by followers of Jesus—if we are to be true to His Spirit and faithful servants of God.

These basic beliefs are included in the affirmation of faith which we read together earlier:

1. "We believe in the Holy Spirit; God present with us for guidance * * *."

2. "We believe in the brotherhood of man under the fatherhood of God."

3. "We believe in the final triumph of righteousness and the life everlasting."

The first of these affirms the capacity of man, "made in the image of God," to be guided by His spirit, to respond to His will.

The second affirms the unity of mankind, the interdependency of all human beings.

The third proclaims the ultimate victory of the just and the eternal nature of the life of the spirit.

Let us apply these three fundamental Christian beliefs to the two major and social and political concerns of our time; the questions of freedom and security.

I. FREEDOM

A. When we consider the question of freedom in the light of our belief that man has a capacity for awareness of God's presence, we must express the conviction that man was meant to be free—free from the dictates of other men, that he might be true to the right as God has given him to see the right—free to respond to the guidance of the Holy Spirit.

No man nor institution should have authority over another man's thoughts.

Thomas Mann once said: "Democracy is the political expression of Christianity." I think that this is a sound contention because democracy assumes this crucial tenet of our faith: that man does have a capacity to respond to what is right and just and, if left free, can wisely govern himself.

The Founding Fathers of our Nation asserted this religious conviction when they conceived a government with the express purpose of preserving man's inalienable right to be free. Thus America at her best has not been a melting pot as some would describe her—where all individuality is crushed and people are poured into a mold of conformity—but a symphony of free minds where all men can express the song in their hearts and can be true to the convictions of their own conscience.

This is a precious heritage which Christians must strive to preserve. For freedom of thought and expression is more than a political question; it is a matter of religious principle involving our basic belief regarding the nature of man.

B. When we turn to our belief in the brotherhood of man and apply this principle to the question of freedom, we are reminded that there is no freedom without a context of responsibility.

There is no liberty without community. The concept of freedom is as meaningless out of context as a vacuum renders a bird's capacity to fly. And for a Christian, who believes in the brotherhood of man, the context of responsibility in which his freedom functions must include all mankind. No other frame of reference would be inclusive enough.

Some would limit the circle of human beings with whom they acknowledge mutual concern and responsibility. Within that circle they exhibit a genuine concern and feel a genuine responsibility. Correspondingly they enjoy a sense of freedom—within the circle.

But for a Christian, who believes in the brotherhood of man, the context of responsibility that makes freedom meaningful, the circle of mutual concern that makes freedom tenable, is humanity.

Indeed it must be so for all human beings. As Abraham Lincoln said: "Any man who will not grant freedom to others has no right to freedom for himself * * * and under a just God will not long retain it."

The inalienable right to be free carries with it a corresponding responsibility to secure and guarantee that right to all men. To paraphrase John Donne's famous words:

"No man is an island entire of himself. * * * Any man's bondage enslaves me because I am involved in mankind."

None of us is truly free until all men, everywhere, are free.

C. When we apply our belief in the final triumph of righteousness to the question of freedom, we discover a higher context of responsibility in which our freedom has its greatest fulfillment—a responsibility to God and His purposes.

This context, of course, includes our responsibility to mankind because God's will certainly includes a concern for the welfare of all men, but, because the frame of reference involves ultimate values and eternal life, we are freed of undue concern for immediate results and anxiety regarding immediate consequences. Our choices transcend temporal and mortal considerations.

This is the only true freedom. A man may seem to be free in any society, no matter how authoritarian it may be, if he accepts the basic assumptions of that society. But man is only truly free when he is able to question the basic assumptions of his context.

For example: If you were put in a large building and told that you could go into any room in the building, wander up and down, explore every corner, and look out every window, but the outside doors were locked and you could not leave, you would experience a sense of freedom within the framework of the acknowledged limitation. This is the kind of freedom which many philosophies and societies grant their members.

But I submit that only a society or philosophy which allows its members to question the basic assumptions it holds is granting its members true freedom.

It is this kind of freedom that a Christian must seek and maintain: Freedom to question all assumptions in the light of his awareness of God's purposes and the final triumph of righteousness * * * the life everlasting. For only then are we truly free: When our ultimate loyalty is to divine responsibilities and eternal purposes.

II. SECURITY

A. Now let us turn to the question of "security" and apply our three basic principles:

Immediately we discover that our faith in man's capacity for guidance by the Holy Spirit and his ability to recognize truth when confronted with it allows us to build our political security on freedom of expression.

The founders of our Nation knew this. Jefferson once said: "Error by the majority can be tolerated as long as the minority is left free to correct."

This is the genius of democracy. Its security lies in its method, and the maintenance of free expression. This is the only true political security, a security that's based on man's ability to know truth when he sees it and to express truth when he's free.

No other political system is ever really secure. Every dictatorship state is doomed to fall by the weight of its own errors, because no one is free to correct them. In an authoritarian society no one dares criticize the decisions of the dictator.

And so our security as a nation is basically rooted in our faith in the dignity of man, his capacity for sound judgment, and the preservation of freedom of expression.

But how easily we seem to forget the basis of our security; how quickly we abandon its basic principles, when we are threatened and afraid. We cast aside our convictions regarding the importance of the individual; we limit the freedom of expression and the democratic process which would keep us secure. We become like that which we fear and lose the security we frantically seek.

In time of war for example, we tend to confuse loyalty with conformity.

This is illustrated by the story of a young conscientious objector who was before a judge during the last war. The judge was railing at him for his attitude and finally asked the young man where he'd be if he were in Hitler's Germany instead of the United States. The boy replied, "Well, I guess I'd be in a concentration camp, Judge, and maybe killed." And then he added, quickly but devastatingly, "By the way, Judge, where would you be if you were in Hitler's Germany?"

As Alan Barth has said so well in his book "The Loyalty of Free Men:"

"National security in a totalitarian state is to preserve the state. National security in a free society is to preserve freedom."

"The national loyalty of free men * * * is not so much to their government but to the principles and ideals for which the government was created."

Blind allegiance may be praiseworthy in a dictatorship, but in a democracy conscientious criticism is essential.

The man who said, "My country right or wrong * * *" was a traitor—to the principles and spirit of democracy. A democratic society depends upon the criticism of its citizens to correct it when it is wrong.

And it can be wrong; men make mistakes. As Reinhold Niebuhr has said:

"Man's capacity for justice makes democracy possible; his capacity for injustice makes democracy necessary."

And so it is the responsibility of the Christian to remind our Nation that political security depends on our faith in man and the maintenance of his freedom of expression—to affirm that the strength of democracy lies not in conformity but diversity—that the virtue of democracy lies not in rule by the majority but in tolerance of the minority.

A great American statesman once discerned that "we have nothing to fear but fear itself."

B. Now let us turn to the principle of brotherhood.

As we examine the question of security in light of the unity of mankind, we are reminded that our security is dependent upon the security of all men. Mankind is a huge interdependent family. The fear and insecurity of one member of the family jeopardizes the security and well-being of all members.

It is not communism that threatens our way of life, our security, today; but the revolution of the hungry, homeless, and oppressed people in our world—people who know no freedom and no security. Communism is merely exploiting the fact of the injustice in the world.

Our response to these people and their struggle for recognition as children of God—capable of response to His guidance and will—individuals of worth, with a right to freedom and security, will determine our security and our future.

Our failure to respond to the needs of our fellow men "to preach good news to the poor; to proclaim release to the captive; to set at liberty those who are oppressed"—as our Master would—have been a source of bitter disillusionment to many men.

A young Latin American student who had been studying in America described the situation fairly well:

"I found your churches much concerned about beautiful worship, new buildings, even spiritual revivals, but hardly anyone seemed to realize that the Christian faith has any relations to racial, social, and economic problems. I heard Americans talk all the time about the freedoms they wanted us to have; no one seemed concerned about the injustices we can no longer bear."

He added: "I was not a Communist when I went to the States, nor am I one today. But I have returned convinced that the Communist is the only one who understands our problems, and that, if you Americans continue on the road you are now following, many of my people will turn to communism in despair."

And many people have—many millions have turned to communism in the past 20 years.

The reaction of most Americans to this fact is described in one of Herb Block's cartoons which appeared in the Washington Post. The cartoon depicts a global scene. On the part of the earth that is America, a portly man is shown sitting in a lawn chair with a newspaper in one hand and a glass in the other. He is looking across the Atlantic Ocean where an emaciated man and woman are standing in tattered clothes. The man is holding up the lid of a garbage can labeled "Communism," while both look hopefully inside. The caption under the picture has the American say: "How Can They Eat That Stuff?"

The answer is simple. They eat that stuff because they're starving—and there's nothing else to eat.

Many people have chosen communism, not because they feel it is a better philosophy of government, but because it has offered

them food and security—a better alternative than what they had—or had reason to expect from us.

"They were hungry, yet we fed them not; they were thirsty, yet we gave them nothing to drink; they were sick, strangers, naked, imprisoned—and we ministered not unto them. And now—they are our enemies—whom we must threaten to destroy with hydrogen bombs.

When will we realize that we can never be secure as long as we are only concerned about ourselves? Perhaps these terrible words written by H. G. Wells in 1916 can shock us into realization today:

"The thought of war will sit like a giant over all human affairs for the next 20 years. It will say to all of us: Set your houses in order; if you squabble among yourselves, waste time, litigate, muddle, snatch profits, and shirk obligations, I will certainly come again. I have taken all your young men between 18 and 50 and killed, maimed such as I please, millions of them. I have wasted your substance contemptuously. Now you have multitudes of male children between the ages of 9 and 19 running about among you. And behind them come millions of babies. But you go on muddling, each for himself, and for his parish and for his family and none for all the world; go on in the old way, stick to your rights, stick to your claims, each one of you; make no concessions, no sacrifices, and presently I will come again and take all that fresh harvest of life, and squeeze it into a red jam between my fingers and mix it with the mud of the trenches and feast on it before your very eyes."

How terrible a picture; but how accurate a prophecy of World War II. Just as it was predicted, it came to pass; and it might happen again—with your children and my children sacrificed to man's greed.

It is the Christian citizen's responsibility to remind his nation that mankind is one—that all men are brothers under the fatherhood of God. America must be challenged to recapture her spirit of concern for the downtrodden people of the world—that precious heritage so well expressed on the Statue of Liberty.

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tossed to me,
I lift my lamp by the golden door."

C. But there is a deeper security we must seek for ourselves and for our Nation—the security that rests a belief in the final triumph of righteousness and the life everlasting, a security that enables as to take the risk of daring discipleship and prophetic witness undaunted by the temporary triumph of evil in the knowledge that God is the Ruler, yet and ultimately His truth and justice will prevail.

Inspired by our Master and His triumph over the Cross, this is our answer to those who would have us build our security with earthly dust. There is only one ultimate security: the conviction that we have done the right as God has given us to see the right.

CONCLUSION

In the 17th century a group of Pilgrims gathered with their pastor before they were to leave Europe for the new world. He read to them from the Old Testament: "And I will make thee a great nation. And I will bless thee and make thy name great. And thou shalt be a blessing."

I think America has become a great nation—primarily because her prophetic leaders kept high before her the Christian principles of the worth of the individual, the brotherhood of man, the final triumph of righteousness.

And I have faith that America will continue to be a great nation and a blessing to all mankind—because these basic Christian ideals are woven into the very fibre of her existence.

But if America is to continue in her greatness, it will require responsible and prophetic citizenship on the part of every Christian—to remind our Nation of this precious heritage and the ideals which have made her great.

These are politics for Christians.

## Time To Act in Commuter Crisis

EXTENSION OF REMARKS
OF
## HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mrs. DWYER. Mr. Speaker, newspapers of Wednesday, March 25, reported the story of the closing of the Weehawken ferry, a key link in the transportation of commuters across the Hudson River from New Jersey to New York.

More than 5,000 commuters have been forced to shift for themselves as a result of the discontinuance of the ferry by the New York Central Railroad—a discontinuance affected under provisions of the Transportation Act of 1958 and permitted by the Interstate Commerce Commission despite protests of State and local authorities.

Under leave to extend my remarks, I include a story which appeared in the New York Times of March 26 describing the effects of the discontinuance.

I call the attention of our colleagues to the article, as they prepare to depart from Washington for the Easter recess, in the hope they will return with renewed determination to take effective steps to prevent a total breakdown of railroad commuter service in the New York-New Jersey-Connecticut area and other similarly afflicted parts of the country. While the overall problem can only be solved by joint Federal-State-local action, the Federal Government should do its part now before it is too late.

I note with pleasure that Subcommittee No. 2 of the Committee on the Judiciary has scheduled hearings on proposals, including my own bill, House Joint Resolution 288, to prohibit States from taxing residents of other States, to begin next month.

I am hopeful that the Committee on Interstate and Foreign Commerce on its Subcommittee on Transportation and Aeronautics will begin consideration of legislation proposed by my colleague, the gentleman from New Jersey [Mr. WALLHAUSER], and me to require hearings and more thorough consideration of the public interest by the Interstate Commerce Commission in the case of applications for discontinuance of railroad and ferry passenger service.

Likewise, I renew my appeal to the distinguished chairman of the Subcommittee on Intergovernmental Relations to undertake a subcommittee study of the ways and means of encouraging greater cooperation between Federal, State, and local levels of government in the solution of such interstate problems as commuter transportation in the tristate New York area.

In each of these fields, I believe the Congress can make an important contribution toward the solution of one of the most vexing problems facing our greatest metropolitan areas.

I urge our colleagues to read the following story as an indication of what may happen again and again in the future, unless we accept the responsibility to act now:

WEST SHORE LINE FALLS OFF BY 85 PERCENT—BUSES TAKE UP SLACK AFTER FERRY SERVICE IS HALTED FROM WEEHAWKEN

(By Clayton Knowles)

Travel to the West Shore Division of the New York Central Railroad dropped 85 percent yesterday with the closing of the Weehawken Ferry.

This pointed up the chain effect of the loss of even a small segment of the region's transportation network. It stood out amid the confusion, sadness, and inconvenience attending the shutdown of a 130-year-old service.

Five thousand commuters, forced to shift for themselves, changed over to bus or automobile and crossed the Hudson River by bridge or tunnel to get to and from their jobs in Manhattan.

In all, only 569 passengers used the West Shore Line during the morning commuter rush hours. Normally more than 3,500 commuters, many of them employees of the railroad, rode this division, which serves Bergen County, N.J., and Rockland County, N.Y., to the north.

Until Tuesday night the railroad operated a ferry service from its rail terminal in Weehawken, N.J., to both Cortlandt Street in downtown Manhattan and 42d Street in midtown.

FUTURE IN DOUBT

The ferry runs were discontinued under the Transportation Act of 1958, which enables the railroads to abandon unprofitable operations even over the objections of State authorities.

The ruling on the ferries, plus the effect the closing has had on West Shore traffic, led to immediate speculation in commuter circles whether the railroad would now move to terminate the West Shore line itself.

A spokesman for the railroad would say only that the matter would be "watched for a few days or weeks to see what the real trend is." The railroad is now seeking to drop 5 of its 23 daily trains.

Commuter spokesmen, sadly appraising the switchover, recalled that the New York Central was able to abandon its Putnam division when the number of riders fell to a comparable figure. This line was closed May 29, 1958.

The New York Central, meantime, continued talks with the Hudson River Day Line, which would like to lease railroad facilities at Weehawken, owned jointly with Railway Express, with a view to reestablishing ferry service.

The complications of ownership were such, however, that George Sanders, Day Line president, confessed late yesterday his company did not know "who we'd be signing a lease with."

The Day Line would put its excursion and sightseeing boats into service for commuter purposes if satisfactory rental arrangements could be reached.

The impact of the ferry closing on the inbound commuter trains yesterday is shown in the following table:

| Arrival Weehawken | Average No. passengers | Passengers yesterday |
|---|---|---|
| 6:20 a.m | 60 | 17 |
| 7:10 a.m | 220 | 123 |
| 7:30 a.m | 302 | 28 |
| 7:45 a.m | 461 | 116 |
| 7:55 a.m | 459 | 29 |
| 8:05 a.m | 398 | 40 |
| 8:10 a.m | 815 | 81 |
| 8:25 a.m | 290 | 23 |
| 8:30 a.m | 555 | 92 |
| 9:15 a.m | 125 | 20 |
| 10:30 a.m | 65 | 7 |

ONE THOUSAND FIVE HUNDRED GET REFUNDS

Because the usual number of railroad men were "deadheading" on the operation, the figures were perhaps even grimmer than they read. The railroad reported that, on Tuesday alone, about 1,500 riders obtained refunds on commutation tickets they no longer would be using.

A more accurate gage of the real number of commuters can be obtained from 1953 averages on sale of monthly or 26-trip tickets. These sales average 2,803 for the year.

Seven New Jersey and New York bus lines, pressed into extra service by the New Jersey Public Utilities Commission, carried these commuters into Manhattan and home again. Most of them carried the commuters direct from thier hometowns to the city.

Public Service Coordinated Transport, New Jersey's largest operator, put on 30 extra buses—10 of them on its heaviest traveled route to Dumont. Two extra buses were put to work between the commuter parking lot at Route 3 and the Port Authority Bus Terminal.

Three other buses ran between the West Shore Terminal at Weehawken and 48th Street and Broadway, Union City.

## West Has Another Choice Besides War and Appeasement—It Can Win the Cold War by Waging Freedom

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 25, 1959*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

WEST HAS ANOTHER CHOICE BESIDES WAR AND APPEASEMENT

(By Edgar Ansel Mowrer)

Well, cheer up. We are off on another diplomatic chase.

Prime Minister Macmillan has convinced President Eisenhower there is some chance that this time we can, by certain not too serious concessions, persuade the Kremlin not to make trouble at West Berlin. The value of the outcome will depend upon the kind of counterconcessions which Khrushchev is willing to make in return for the concrete advantages he gets from us.

There is of course a chance that West Germany, backed by France, may refuse terms that seem acceptable to the United States and Britain. But it now appears certain that unless the USSR raises its terms, late spring will see a conference of foreign ministers and late summer a new summit conference not unlike the one at Geneva in 1955.

Some Americans are jubilant. More, I imagine, have doubts. But, the latter argue, what else can the West do? Either we negotiate or we fight. Either we wage peace by argument or we wage war to the general ruin. How can one hesitate?

Obviously, one could not hesitate if the West's only choice were between waging peace and waging war—as our President seems to feel. Yet looking around, we see, I think, that we have another and so far unexplored avenue more promising than either—so far unexplored by the West, I mean. To identify it, we need only look at the Kremlin.

Even since the end of World War II Moscow has been waging something that is neither peace nor, with minor exceptions that got out of hand like Korea, serious war. First Stalin and then Khrushchev have been waging expansion. Where they could, as in Czechoslovakia, they have adopted measures short of fighting. In other places, such as China and Iraq, Indochina and Korea, they have tried to keep the fighting limited to civil war. They have indeed accustomed the world to something that is neither peace nor major war. And with triumphant success, as a glance at the map conclusively shows.

WAGED COLD WAR

That something has been called the cold war. Most people in the West have not liked it. Indeed, it is to get rid of it that they are so anxious to wage peace by resorting to dubious negotiation.

For to some it is dangerously likely to lead to hot war. To others it is needlessly, crushingly expensive.

Yet the fact remains that the Soviets have for over 12 years waged cold war with steady success. For in their eyes cold war and Communist expansion are identical.

And whatever one thinks of the cold war, one fact stands out: The Soviets have made of it a third way, neither peace nor hot war. And the conclusions seem obvious: If such a third way exists for communism, does it not also exist for the West?

It certainly does. Its name is waging freedom. Waging freedom means that, instead of continuing the military and diplomatic defensive, the West publicly sets as its goal an extension or recovery of the area of national determination—the rollback of communism. It means the cool, calculated, and determined acceptance of the Soviet challenge in the intermediate field. Above all, it means a complete repudiation of the thesis that the West has no choice save humbly seeking peace or accepting nuclear annihilation.

Most of all, waging peace would mean an end to the present make-believe in regard to Soviet intentions that dominates too much thinking. Many, too many, believe, or are trying to believe, that by some means—a mixture of defensive firmness, magical formula, and turning the other cheek—the Kremlin can be induced to call the cold war off.

For this, with apologies to Prime Minister Macmillan, there is no shred of concrete evidence. All known facts point the other way—to the conclusion that the U.S.S.R. is gradually forcing the West back without fighting by playing upon its nuclear fears, its reluctance to believe the unpleasant, and its even greater reluctance to overtrump Soviet military expenditures.

WEST HAS BEST HAND

Yet curiously enough, even in such an intermediate struggle, the stronger cards are on the side of the West. The Kremlin can play upon the reluctance of a free people to accept a long and costly diplomatic and armsbuilding struggle. But the West can count upon much more—the fact that so far as is known, communism is popular in no country where it has firmly fixed its claws—not even in the U.S.S.R. as hundreds of thousands of defections from the Soviet Army during World War II demonstrated.

To be brief: The West has it in its hands to adopt a third policy, a policy of waging freedom short of major war—and outlasting the Kremlin at its own chosen game. For the West has several times the economic resources and in addition the overwhelming moral resource of the appeal against Communist tyranny. It can, if it chooses, chivvy and harry Moscow to the point of exhaustion and despair. It can win without fighting provided it has the courage and the stamina.

Perhaps, when the coming summit meeting has again demonstrated that the Kremlin is all take and no give, when the Macmillan policy of defensive flexibility has again revealed its defects, western leaders will muster the courage to draw the obvious conclusion—and call upon their peoples to settle down and win the cold war as the only safe method of securing both peace and freedom.

## LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

## GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

## PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).
